## INTRODUCTION

Due to historic low investment in infrastructure and lack of maintenance in public school infrastructure, the province experiences huge backlogs in the provision of infrastructure in line with the Norms and Standards. Currently as per the framework for effective schools developed by the province the estimated backlog is at R44.3 billion including condition priority maintenance and these does not include the need for new schools.

The Department has estimated that there is still a need for 383 new schools (228 primary schools and 155 secondary schools) and these do not form part of the estimated backlog cost. The Department is confronted with the increasing demand for schools in the main towns (termed fast growing towns) found in Emalahleni, Steve Tshwete, City of Mbombela and Govan Mbeki municipalities. This is exacerbated by the lack of public land availability in these towns which makes it difficult to provide the schools within the anticipated timeframes.

The global Coronavirus pandemic has placed enormous pressure on the compliance of education infrastructure and this has exposed the inequalities that exist within the Province with regards to availability and functional education facilities and accompanying basic services. It has also exposed the lack of commitment to infrastructure maintenance by the schools and weaknesses in both ICT and physical security investments at schools as more than 175 schools were vandalized and a number of schools found to have neglected maintenance resulting to these schools being non-compliant to COVID-19 hygienic requirements to limit the spread of the virus.

The Department though its plan was already biased towards eradication of sanitation backlog but the capacity of the Implementing Agent as well as other competing priorities has placed enormous COVID-19 compliance issues and budget pressure in the 2021/22 and the MTEF since the funds had to be reprioritized to solely deal with commitments, hygiene packages, screeners and provision of reliable basic services. Increasing the portfolio and pushing back timeframes has exposed further the challenges of relying on one IA.

The PED's 2021/22 plan prioritized the targets set in the 2020/21 plan for the MTSF 2019 – 2024, thus this plan accommodates the plans that were deferred in the previous 2020/21 financial year. Basic services were brought forth to the 2020/21 financial year for planning, design and construction commencement for some, due to funds not all could be implemented in the 2020/21 financial year but carried-over to 2021/22 financial year. This has been exacerbated by poor performance by the Implementing Agent as most of the projects that were carried-over in 2019/20 are still lagging behind and the projects for 2020/21 were appointed late for construction commencement.

The Department in the 2021/22 U-AMP continues with the eradication of basic services backlog whereby all schools with basic services challenges are included in the 2021/22 for construction completion except for 22 schools with inadequate sanitation and only earmarked for planning, design and construction

commencement but completion in 2022/23 financial year. In the 2021/22 infrastructure plan with the completion of basic services backlog, the Department begins to intensify its efforts towards the eradication of replacement of unsafe structures (Condition C1 and C2 schools as per the GIAMA conditions rating), structural failures, substitution of unsafe/inappropriate structures (that is, classrooms built with asbestos material, dilapidated classrooms and replacement of mobile classrooms).

The Department continues to address the replacement of asbestos structures in 88 schools with 691 classrooms and provision of Grade R facilities as part of basic safety and to ensure that the new mandate on Early Childhood Development is supported with infrastructure. There are 39 out of the 88 schools included the 2021/22 plan whereby 07 school for replacement of 36 asbestos classroom will be under construction, 32 schools for the replacement of 191 classrooms under planning and design, with a total allocated budget of **R 55.7 million** and this budget will increase in the next financial year with the reduction of basic services backlog.

To promote holistic planning and for cost effectiveness the plan also addresses other infrastructure needs in the schools earmarked for the substitution of unsafe/inappropriate structures such as maintenance, provision of Grade R facilities and other facilities that may not be there when the school is prioritized has also been redirected.

A number of initiatives are noted in the plan to deal with the existing needs and demand for new schools however these backlogs are also exacerbated by the impact of the COVID 19 pandemic and global warming and the unprecedented recent hailstorms and heavy rainfall which resulted in a negative impact on school infrastructure. A number of flash floods were experienced between October 2018 and March 2020 and these left a number of school facilities damaged in Bohlabela, Ehlanzeni and Nkangala district and minimal damages at Gert Sibande District, these were not addressed in the 2020/21 financial year due to COVID-19 reprioritization and are now carried over to 2021/22 financial year. These reverses gain in delivering the prioritised needs but it also presents an opportunity to conduct other scheduled maintenance at these schools and provide additional facilities whilst minimizing professional fees.

The Mpumalanga Department of Education in this plan still commits to the remaining sanitation backlog under the inadequate sanitation programme in 317 schools in the 2021/22 financial year and has set aside **R 482 million** to do away with plain pit toilets that augment the acceptable toilets due to inadequate facilities in line with the Norms and Standards and to also address in adequate sanitation to schools that experience enrolment growth.

As a conclusion, the Coronavirus has made the Department to be vulnerable by exposing the inequalities in infrastructure provisioning and emphasize the importance of achieving the targets set in the Norms and Standards to ensure that all schools meet minimum functionality, whilst also exploring other alternatives to shorten the time for the achievement of these targets.

## EXECUTIVE SUMMARY

The Regulations Relating to Minimum Uniform Norms and Standards for Public School Infrastructure published on 29 November 2013 (which in the document will be referred to as the Norms and Standards) provided specific targets to be complied with and the department has developed a framework for effective schools which quantifies the efforts and budget requirements to achieve the timeframes. This framework provides the baseline and points out the infrastructure provisioning focus areas for the province to comply with and achieve the targets set in the Norms and Standards.

The Norms and Standards overall has created a backlog identified as the gap between the current infrastructure situation in schools and the situation that is believed to be acceptable as per these Norms and Standards.

This has increased the additional funding required to eradicate the backlog within the Norms and Standards set timeframes. The province to date has not achieved the eradication of pit toilets which the deadline was set for 29 November 2016 as part of the three (3) year target to be achieved after the promulgation of the Norms and Standards. Mpumalanga Department of Education (MDOE) still had 03 (earmarked for closure) out of the 127 schools with plain pit toilets only, identified in 2018 and 75 schools where pit toilets were not demolished after provision of improve sanitation facilities as at May 2018, some due to water challenges in case of schools provided with waterborne toilets and some due to refusal by School Governing Bodies stating reasons of backup when there is no water and/or utilization as disposal for sanitary towels and storage facilities. Due to the continued fatalities caused by the existence of pit toilets the 2021/22 MTEF plan focused mostly on provision of basic services exacerbated by the Global Coronavirus pandemic which demanded availability of water and hygienic sanitation facilities.

The Department as at May 2018 had 1088 schools that had inadequate sanitation including schools with a mixture of acceptable (VIP, Enviro loo, Waterborne toilets) and unacceptable (plain pit toilet) standard of toilets. In 2020/21 financial year the remaining backlog is indicated in the table below. The Department carried-over 315 sanitations from the 191 schools with a mixture of plain pit toilets and acceptable toilets, schools with dilapidated sanitation facilities that need replacement and the schools with inadequate sanitation.

This report responds to the requirement of Clause 4 (6) (a) that "A Member of the Executive Council must, within a period of 12 months after the publication of the regulations and thereafter annually on a date and in the manner determined by the minister, provide the Minister with detailed plans on the manner in which the norms and standards are to be implemented as far as schools referred to in sub-regulation (1) are concerned". The report gives the status for

Mpumalanga Department of Education towards meeting the targets as at the end of November 2021, the eight anniversary of the Norms and Standards.

The objectives of the Regulations Relating to the Minimum Uniform Norms and Standards for Public Schools Infrastructure are given as;

- To define the minimum uniform norms and standards for the school infrastructure.
- To ensure that there is compliance with these norms and standards in terms of design and construction of new schools, additions, alterations and improvements to the existing schools.
- To provide timeframes within which school infrastructure backlogs must be eradicated.

The table below gives a summary of the backlog targets and their delivery timeframes as spelt out in the Norms and Standards with the associated backlog and required budget to eradicate:

Target Timeframe	Description of Target	Target Date	Target Backlog as at 30 November 2021	Required Budget To Eradicate the backlog

**Table 1:** Norms and Standards promulgated targets and deadlines (Provincial Education infrastructure backlogs towards cost effective schools compiled and approved in 2017)

### Current demand for new infrastructure

The current demand of infrastructure facilities in the Department is determined by various factors. Some of these factors are within the control of the department such as prioritisation and effective use of facilities, and management. Other factors are outside the control of the department, such as inclement weather resulting from storm damages and community protests.

This demand is dependent and determined by the following: -

- Current Supply of Infrastructure to cater for the needs of learners in the province.
- Current under/over-utilisation of existing assets.
- Current condition of existing infrastructure; assets of poor condition rating must be replaced or upgraded in order to satisfy existing demand.
- Long-term provincial economic and spatial development plans including specific sector department plans such as planning for future human settlements.
- Migration patterns identified within the province and expected utilisation of existing infrastructure and the need for new infrastructure.

There are various spaces and functions, which contribute and result in a conducive and effective teaching and learning environment. These measures for enabling school environment in the planning guidelines are graded as basic safety (water, sanitation, inappropriate structures, classroom overcrowding and fencing), minimum functionality (adequate provision of classrooms, sanitation, electricity and water) and optimal functional spaces (education support spaces: classrooms meeting minimum size, specialists' classrooms, administration block, school hall).

The Norms and Standards thereafter prioritizes these school facilities by providing timeframes within which they must be delivered. Below this plan indicates the identified categories and group them into the three (3), seven (7), ten (10) and seventeen (17) year backlog targets, quantifies and provide cost to inform the budget required to eradicate these backlogs.

The backlogs are informed by the NEIMS Condition assessment carried out during the 2016/17 and uploaded unto the EFMS at the end of the 2017/18 financial year. The previous U-AMP was

updated with the 2016 data, therefore, the previous year data will only be updated in this U-AMP with achievement as at end of 2019/20 and the projects earmarked for completion in the 2020/21 financial year which show progress in the implementation of the Norms and Standards.

### **Historic capital investment towards addressing the norms and standards targets.**

The table below gives the summary of the Department's total budget allocations for the respective years starting 2013/14 to 2022/23 financial year.

<b>No.</b>	<b>Financial Year</b>	<b>Total Final Budget Appropriation ('R000)</b>	<b>Total Expenditure ('R000)</b>	<b>(Over) / Underspending ('R000)</b>

**Table 2:** summary of the Department's total budget allocations for the respective years starting 2013/14 to 2022/23 financial year

Education Infrastructure Grant (EIG) remains the major source of funding for the provision of infrastructure with the equitable share and the EPWP budget was fully allocated but Equitable share was not allocated to cater for the projects which were committed within the ES Equitable Share projects in the previous Financial year 2020/21 FY, e.g the department had to request an approval from DBE in order to can pay invoices for Thaba Chweu Boarding School as the project was under ES, and there were other upgrades and addition projects which were committed through Equitable Share.

Against the set Norms and Standards, following is a summary of the provincial achievement in providing education infrastructure:

- ✚ **3 Year Target:** Basic safety categorises the items, which primarily addresses the safety of learners and teacher at the schools. The programme addresses the backlog in the provision of electricity, water, sanitation, accessibility, replacement of inappropriate structures, and fencing that meet minimum requirements as per the Norms and Standards. In 2013, the Minister of Education set the target for addressing the basic safety backlog as November 2016 in terms of basic services and schools with completely inappropriate structures and November 2020 for provision of ramps and rails, adequate/consistent basic services supply (sanitation, water and electricity) and fencing that meet minimum requirements.

All Schools have form of sanitation, electricity and water except for two (2) schools which are Nkokweni and Springvalley Primary Schools. Nkokweni Primary School is situated in Gert Sibande District and the school relied on Plain Pit Toilets as the ONLY form of sanitation. It should also be noted that the school is one of the 9 schools that are going to be closed upon the completion and operationalization of the Mkhondo Boarding School which is currently at 85 % towards completion. In terms of schools that are built entirely with inappropriate material (zinc, asbestos, wood, mud etc.), the Province does not have such school falling under this category.

- ✚ **7 Year Target:** for the period under review, the Province focused in addressing basic services inadequacies in schools to ensure uninterrupted access of such services. For sanitation, there were 315 schools falling under this category where 89 have been completed whilst 108 are still under different stages of implementation, and 118 are under planning and design.

- ✚ As for Water, there were 247 schools with unreliable water supply where through the Department of Human Settlement, 106 schools have been provided with boreholes whilst 141 projects are at different stages of construction.

- ✚ **10 Year Target:** A school environment is considered to meet optimum functionality if it learners and teachers have access to specialist rooms such as laboratories, libraries/ media and computer centre. Every school must have access to these facilities in 10-year after the promulgation of the Norms and Standards. These spaces enhance school performance, though the school can function adequately without. Because of the nature of these spaces, basic safety and core educational spaces take precedence over optimal functional spaces; in prioritization and implementation.

- ✚ **17 Year Target:** Education support areas forms part of the 17-year target as per the Norms and Standards and these include Admin block, school halls, kitchen, sports field and car parking. There are administration spaces such as school halls which is critical at secondary

schools for writing Grade 12 examinations, however these are currently provided in new schools. The same as administration block these are critical spaces for teachers for lesson preparations and administration work but also it is only provided in new school currently until such time that the department fully eradicate basic safety and minimum functionality. The Department has also decided to no longer provide school halls in primary schools since they are underutilized and taking into account the current backlog and limited financial resources.

## **1. INTRODUCTION**

### **1.1. Background**

The Minimum Uniform Norms and Standards for Public School Infrastructure, hereinafter referred to as the Norms and Standards, were promulgated on 26 November 2013 aimed at addressing the uneven development with respect to provisioning of basic school infrastructure to all public schools in order to provide relevant, effective, responsive and sustainable teaching and learning environment.

It is a requirement in terms of Clause 4 (6) (a), that "A Member of the Executive Council must, within a period of 12 months after the publication of the regulations and thereafter annually on a date and in the manner determined by the minister, provide the Minister with detailed plans on the manner in which the norms and standards are to be implemented as far as schools referred to in sub-regulation (1) are concerned".

This report gives the status for Mpumalanga Department of Education herein referred to as the Department, towards meeting the targets as at the end of November 2021, the seventh anniversary of the Norms and Standards.

### **1.2. Objectives of the Regulations**

The objectives of the Norms and Standards are the following:

- a) To define the minimum uniform norms and standards for the school infrastructure.
- b) To ensure that there is compliance with these norms and standards in terms of design and construction of new schools, additions, alterations and improvements to the existing schools.
- c) To provide timeframes within which school infrastructure backlogs must be eradicated.

## **2. DEPARTMENT'S PROGRESS MADE IN INFRASTRUCTURE DELIVERY FROM 2013/14 FINANCIAL YEAR TO 30 NOVEMBER 2021**

### **2.1. Target Deadline: 3 Years, ending Nov 2016**

#### **Sanitation:**

- ✓ 1 659 schools have been provided with water, sanitation and electricity with the total capital investment value of R 2, 4 Billion Spent to date.
- ✓ Of the 1659 schools addressed are the 127 schools that were found to have been using plain pit toilets ONLY as the form sanitation as part of the presidential SAFE programme which was rolled in 2019.
- ✓ The Department is currently having 315 schools remaining as the sanitation backlog (these schools are using a combination of acceptable sanitation facilities augmented with pit toilets due high learner enrolment) which is currently in the Departmental infrastructure plan for 2021/22.
- ✓ It should however be noted that the Province is having only 01 schools which is using pit toilets that are awaiting closure upon the completion of the construction of Mkhondo Boarding School which is currently at 85%.

#### **Electricity:**

- ✓ There are 02 school within the province that does not have any form of electrical connection, but currently under implementation at 35% progress, and 01 which is under relocation.
- ✓ For the year under review, ONLY two schools vis. Berbice (relocated school) and Spring valley (upgrade Project)
- ✓ The only challenges on electricity are as follows:
  - ✚ Schools are disconnected due to non-payment of bills.
  - ✚ There is a high level of vandalism in some schools.
  - ✚ Some schools have single phase electricity supply which becomes inadequate when a school acquires facilities like a borehole. When boreholes are added to a school, the project comes with upgrading of the electrical supply from a single phase to a three phase.

#### **Water Provisioning:**

- ✓ There is no school in the province that does not have any form of water supply:
- ✓ However, the challenge is sufficiency and uninterrupted supply.
- ✓ Where new and additional sanitation facilities are provided, water supply is augmented as part of that sanitation project.

In Summary, All Schools have form of sanitation, electricity and water except for two (2) schools which are Nkokweni and Springvalley Primary Schools. Nkokweni Primary School is situated in Gert Sibande District and the school relied on Plain Pit Toilets as the ONLY form of sanitation. It should also be noted that the school is one of the 9 schools that are going to be closed upon the completion and operationalization of the Mkhondo Boarding School which is currently at 85 % towards completion. In terms of schools that are built entirely with inappropriate material (zinc, asbestos, wood, mud etc.), the Province does not have such school falling under this category.

## **2.2. Target Deadline: 7 Years, ending Nov 2020**

### **Inadequate Basic Services (Water, Electricity & Sanitation):**

- ✓ Borehole and associated water storage provisioning to 247 schools to ensure sustainability of water supply at a budget of R74 million, being implemented by the Department of Human Settlements to whom the programme budget was allocated, against the 247/106 projects were completed and the remaining 141, are still under implementation and will be completed by the end of 2021/22 financial year.
- ✓ For the period under review, the Province focused in addressing basic services inadequacies in schools to ensure uninterrupted access of such services. For sanitation, there were 315 schools falling under this category where 89 have been completed whilst 108 are still under different stages of implementation, and 118 are under planning and design.

### **Schools built partly inappropriate material:**

- ✓ The province also has schools that are partly built with inappropriate material such as asbestos. There are currently 88 schools with 691 structures either built or roofed with asbestos material and these are part of the 7-year backlog target. The estimated cost for the eradication and replacement of structures built with asbestos structure is **R 401 471 000 @ R581 000** per classroom.
- ✓ Some of the classrooms are not currently in use as the school have been provided with mobile classrooms as an interim measure, whilst in other schools there is only need to demolish, needs assessment are currently underway to determine the utilization ratio of the schools with structures built with asbestos material and this can either reduce the estimated costs. The Department plans to eradicate structures built with asbestos material in the next 5 years (2020 – 2024).

District	No. of Schools	No of structures built with asbestos material
Gert Sibande	34	303
Nkangala	34	268
Ehlanzeni	13	82
Bohlabela	7	38
<b>Total</b>	<b>88</b>	<b>691</b>

**Table 3: summary of the Departmental structures built with asbestos material.**

**Overcrowding (Classrooms incl. Grade R Classrooms) Electronic Connectivity:**

- ✓ The Department has built 1955 classrooms and 96 Grade R's Centre's in schools since 2013 to alleviate overcrowding.
- ✓ The Department replaced unsafe structures to 46 schools, constructed 17 new schools and five boarding schools to replace unviable farm schools, rehabilitation

**Fencing and Full Service Schools (Universal Access & Safety Compliance):**

- ✓ The Department has provisioned 15 schools since 2013 with fencing to ensure safety for the teachers and learners.
- ✓ The Department replaced unsafe structures to 46 schools, constructed 17 new schools and five boarding schools to replace unviable farm schools, rehabilitation

**2.3.Target Deadline: 10 Years, ending Nov 2023**

**Schools with no Libraries or Media Centres:**

- ✓ Since 2013 the department has provided a total number of 40 libraries and 2 media centres.

**Schools with no Laboratories:**

- ✓ The Province has provided 39 laboratories since 2013 across the various districts.

**2.4.Target Deadline: 17 Years, ending Nov 2030**

**Inappropriate materials maintenance and growth (New Schools):**

- ✓ Maintained 392 schools.
- ✓ The Department replaced unsafe structures to 46 schools, constructed 17 new schools and five boarding schools to replace unviable farm schools, rehabilitation

**Appropriate provision of sports facility, kitchen, school halls/forums, car parks, multi-purpose centres:**

- ✓ 11 sports facilities were provisioned through the construction of boarding schools and new schools in the province.
- ✓ 16 carports, 10 kitchens & 9 school halls were provisioned through the new and replacement schools since 2013.

**Table 4.** below gives a summary of the 7-, 10- and 17-Year Targets infrastructure provided from the promulgation of the Norms and Standards in November 2013 to 30 November 2021, with basic services remaining a priority in terms of resource planning and delivery against the norms and standards.

The Department has not made much progress with regards to provision of facilities that facilitate minimum functionality at schools due to focus on provision of basic services. However, the Department has from 2013/14 to 30 November 2021 managed to deliver 1955 additional classrooms to alleviate overcrowding, replacement of unsafe structures to 46 schools, constructed 17 new schools and 5 boarding schools to replace small and unviable farm schools, rehabilitation of 194 storm damaged schools which occurs yearly, carried out planned maintenance to 392 schools.

From 2013/14 financial year, the department added classrooms as well as building new schools to alleviating overcrowding in existing schools. **Table 4** Below gives the progress made on terms of providing facilities required for minimum functionality, i.e. additional classrooms.

### 3. REMAINING INFRASTRUCTURE BACKLOGS TO COMPLY WITH THE NORMS AND STANDARDS

#### 3.1. 7 Year Target

Sanitation: The 315 sanitation backlog continues to be under construction in 2021/22 and the remainder will be completed in 2022/23 financial year. Thus, the sanitation backlog is targeted for eradication by end of 2022/23 financial year.

School built with inappropriate materials **Annexure B** attached to this report gives the list of the 88 schools that are still having some asbestos structures as part of their infrastructure.

Electricity: There is only 01 schools in the province that does not have access to any form of power supply unless if it's a new project where bulk electricity is required which make them 02 altogether, where there is a new form of electricity. The Department however continues to address general and vandalism damages through the routine maintenance programme.

## 5 MDOE's CHALLENGES AFFECTING INFRASTRUCTURE DELIVERY TO MEET NORMS AND STANDARDS AND PROPOSED REMEDIAL ACTIONS

A great deal of pressure has been accorded to the compliance of education infrastructure because of the global Coronavirus (COVID-19) pandemic. Also, this has alluded to the inequalities that exist within the Province regarding the available and functional education facilities- along with, accompanying basic services. The global pandemic has also revealed: minimal commitment to infrastructure maintenance by schools, and drawbacks with ICT and physical security investments. More than 175 schools have been vandalized and numerous neglected to be maintained, and there are 63 schools which were affected by storm since Mpumalanga Province is the worst department in terms affection by the storm damages. subsequently, these schools are non-compliant with COVID-19 hygiene standards.

Additional Basic services were introduced to the 2020/21 FY for planning, design and construction commencement, but due to the late appointment of contractor by our sole implementing agent DPWRT, not all of them could be implemented in the 2020/21 FY but would have to be carried-over to the 2021/22 FY and but to date still not all were appointed and will then be completed in the 2022/23 FY

### 5.1 MDOE's Challenges Affecting Infrastructure Delivery

The following are challenges facing project delivery and performance, including the mitigation measures.

No	Challenge	Proposed Improvement Strategy	Progress Made on the Improvement Strategy
<b>Category A – Covid-19 Affecting the entire globe</b>			
1.1	Part of EIG budget used for Covid-19 PPE and payment of screeners.	Reprioritization of the infrastructure plans to give priority to basic services that are a direct contributor of Covid-19 hygiene requirements	The IA issued with the adjusted infrastructure plan.
1.2	Stoppage of on-going projects due to lockdown and shortage of construction material	Implementing agent engaging the contractors and ensuring that invoices submitted for work done need to be paid timeously to avoid project delays.	Engagements are on-going
<b>Category B – MDOE Challenges</b>			
1	Infrastructure planning deficiencies resulting in non-compliance with Infrastructure Delivery Management System (IDMS) prescripts requiring :		
1.1	Needs raised outside the department's business processes.	<ul style="list-style-type: none"> <li>Strengthen Community feedback mechanisms through Education stakeholders' consultation as well as broader community consultations pre and post planning phases (vis. During the municipal IDP</li> </ul>	The Department developed circulars as part of communication and feedback strategy to communicate projects for 2019/20 and draft plan for 2020/21 since

		processes and District Management meetings)	meetings with district and circuits didn't materialized.
1.2	Delayed infrastructure delivery due to site identification and confirmation. Or cases where a site was identified at pre-planning stage, site is invaded by communities at time of commencing with construction.	<ul style="list-style-type: none"> <li>Internally ensuring that land is identified in line with the department's needs as identified U-AMP and IPMP.</li> <li>Developing and management of land bank in line with Municipal Spatial Development Frameworks and Municipal IDPs.</li> </ul>	The Department continues to engage municipalities in fast growing towns where new schools required, regarding acquiring land for the schools.
2	Non-credible Infrastructure Plans leading to inadequate budget spending		
2.1.	In-year Cancellation of projects against the approved plans	<ul style="list-style-type: none"> <li>Use the NEIMS conditions assessments to verify infrastructure needs identified through the prioritisation process.</li> </ul>	The NEIMS Conditions assessments carried out in 2016/17 were captured onto the Department's EFMS in 2017/18 financial year. The Department is using this latest database. The next NEIMS condition assessment is planned for commencement in 2021/22 FY. Bid specification for the NEIMS Condition Assessments are advertised for appointment.
3.	Inadequate programme monitoring and management due to limited monthly travel kilometres per official.	<ul style="list-style-type: none"> <li>Improved districts' capacity to closely monitor the projects by recruiting works inspectorate personnel (Works inspectorate mentorship by TA, IDMS Introductory to all DoRA technical posts by TA &amp; Provincial Treasury, NEIMS Condition Assessment by DBE, IRM training to all new DoRA head office officials by Provincial Treasury</li> </ul>	<ul style="list-style-type: none"> <li>Programme monitoring has been improved through urgent filling in of vacant works inspectorate posts as and when they fall vacant as well as training the and mentorship provided to the works inspectors.</li> </ul>

No	Challenge	Proposed Improvement Strategy	Progress Made on the Improvement Strategy
		<ul style="list-style-type: none"> <li>Conducting in-house training and mentorship sessions in partnership with DBE and Provincial Treasury.</li> <li>Developed project monitoring and evaluation tool used for early identification and reporting of problematic projects.</li> </ul>	
4	High staff turnover on DoRA funded technical posts.	<ul style="list-style-type: none"> <li>Immediate recruitment and appointment once posts are vacated.</li> <li>Retention strategies include continuous training and mentorship as well as availing tools of trade, decent office space and furniture.</li> </ul>	<ul style="list-style-type: none"> <li>The Department is progressing with head-hunting the professional vacant positions.</li> <li>The Department continues to provide tools of trade (computers, protective clothing and furniture) to all infrastructure personnel as a retention strategy. Only office space is still an on-going challenge.</li> </ul>
<b>Category C– Implementing Agent (IA) Related Challenges</b>			
5	Late Appointment of Service Providers by the IA leading to Under spending on the infrastructure programme	<ul style="list-style-type: none"> <li>Ensuring that MDOE is submitting the Infrastructure Plans (U-AMP, IPMP and Construction Procurement Strategy) to the IA in line with the timeframes stipulated by the Division of Revenue Act and the Education Infrastructure Grant Framework (EIG)</li> <li>Request for additional Implementing Agent capacity in the Province through submitting a memo to EXCO requesting for the same.</li> </ul>	<ul style="list-style-type: none"> <li>The Department has submitted the 2020/21 infrastructure plans to the Implementing Agent within timeframes prescribed in the Division Revenue Act.</li> <li>The Department still relies on Department of Public Works, Roads and Transport as its Implementing Agent.</li> </ul>
6	Slow and late commencement with construction works after site hand over and disruptions by communities and other interest groups.	The IA to engage relevant stakeholders to engage communities on the issue of the 30% local content.	The Implementing Agent has appointed Community Facilitators on projects under implementation. However, success has been registered as these disruptions are also politicised.

No	Challenge	Proposed Improvement Strategy	Progress Made on the Improvement Strategy
7	<p>Inadequate programme management and projects monitoring by the IA – Thus;</p> <p>Failure to quality check work submitted to client department.</p> <p>Failure to monitor professional service providers thereby having projects going for construction with incomplete designs thus raising variations, unjustified lump sums and late completion .</p>	Request for additional Implementing Agent capacity in the Province through submitting a memo to EXCO requesting for the same.	The implementation of the SLA to be enforced.

Mpumalanga as a whole is faced with limited registered professionals. This is further exasperated by having only one implementing agent (IA) for all client departments- Department of Public Works, Roads and Transport (DPWRT). Having to solely implement for all client departments, DPWRT finds itself exposed to having minimal capacity. Despite the assistance of MRTT. Subsequently this has negatively affected the quality of works at ground level, as there is not enough physical resources to manage activities such as social unrests that could be a result of political agendas. Thus construction is hastened to leave site as soon as possible to mitigate such. Hence, the negative affect on the quality of work.

The global Coronavirus pandemic has placed enormous pressure on the compliance of education infrastructure and this has exposed the inequalities that exist within the Province with regards to availability and functional education facilities and accompanying basic services. It has also exposed the lack of commitment to infrastructure maintenance by the schools and weaknesses in both ICT and physical security investments at schools as more.

## 6 RECOMMENDATIONS

It is recommended that the Honourable Minister: Basic Education, takes note of Mpumalanga Provincial Department's progress in addressing the Norms and Standards as at the end of the eight anniversary of the promulgation of the Norms and Standards and provide further support to the Department regarding infrastructure provisioning and finally the province consider using additional implementing agent to maximise professional capacity to carry out projects efficiently.
