These workbooks have been developed for the children of South Africa under the leadership of the Minister of Basic Education, Mrs Angie Motshekga, and the Deputy Minister of Basic Education, Mr Enver Surty.

The Rainbow Workbooks form part of the Department of Basic Education’s range of interventions aimed at improving the performance of South African learners in the first six grades. As one of the priorities of the Government’s Plan of Action, this project has been made possible by the generous funding of the National Treasury. This has enabled the Department to make these workbooks, in all the official languages, available at no cost.

We hope that teachers will find these workbooks useful in their everyday teaching and in ensuring that their learners cover the curriculum. We have taken care to guide the teacher through each of the activities by the inclusion of icons that indicate what it is that the learner should do.

We sincerely hope that children will enjoy working through the book as they grow and learn, and that you, the teacher, will share their pleasure.

We wish you and your learners every success in using these workbooks.

Mrs Angie Motshekga,
Minister of Basic Education

Mr Enver Surty,
Deputy Minister of Basic Education

   - –
   - 14
   - + 48
   - 2
   - 534

2. **Fill up the hundred.**
   - a. 368
   - b. 371
   - c. 684
   - d. 519
   - e. 225
   - f. 568
   - g. 274
   - h. 479
   - i. 383

3. **Calculate the following:**
   - a. 3 526 + 97 =
   - b. 6 537 + 84 =
   - c. 4 833 + 95 =
   - d. 1 789 + 39 =

WORKSHEETS R1 TO R16

Name:
1. Count the oranges.

a. 

b. 

c. 

d. 

How many oranges are there? See how fast can you count them.

Note that the first 16 worksheets will be revision activities.

Do not count the individual oranges. Count them as groups.
2. Count the total of all these oranges. The bags and boxes have the same number of oranges as above.

a.

b.
3. Each box shows the total number of objects inside each box. Write down the total number of objects.

a. 

b. 

c. 

How quick are you?

What you need:
Cut-out 1.

What to do:
- Play in pairs.
- Cut-out the cards from the back of your book.
- Place them face down on your desk.
- You choose five cards and your partner chooses five.
- Turn them over at the same time.
- See who can give the total the quickest.
- Check your partner’s answer.
- Do the same using 6, then 7, 8, 9 and 10 cards.
- The person with the most correct answers is the winner.
Numbers 0 – 10 000

What number will these cards make?

8 0 0 0
6 0 0
2 0 1

8 6 2 1

Eight thousand six hundred and twenty-one

1. Complete the following and also write your answers in words:

a. 3 0 0 + 4 0 = 3 4 0
   three hundred and forty

b. 7 0 0 + 8 =

   

c. 3 0 0 0 + 1 0 0 + 4 0 =

   

d. 9 0 0 0 + 6 0 + 7 =

   

e. 6 0 0 0 + 9 =

   

2. Write the number in the correct column:

<table>
<thead>
<tr>
<th></th>
<th>Thousands</th>
<th>Hundreds</th>
<th>Tens</th>
<th>Units</th>
</tr>
</thead>
</table>
a. 387  |           | 3        | 8    | 7     |
b. 704  |           |          |      |       |
c. 4205 |           |          |      |       |
d. 8390 |           |          |      |       |
e. 4100 |           |          |      |       |

3. Complete the following as in the example:

723 = 7 hundreds + 2 tens + 3 units

a. 678 = 

b. 5021 = 

c. 7804 = 

d. 6300 = 

continued
4. Look at the first example (a).

Now write the other numbers in expanded notation.

a. $654 = 600 + 50 + 4$

b. $203 = \underline{\hspace{3cm}}$

c. $2015 = \underline{\hspace{3cm}}$

d. $8002 = \underline{\hspace{3cm}}$

e. $7605 = \underline{\hspace{3cm}}$
5. Write the following in words.

a. 50

b. 300

c. 8 000

d. 730

e. 9 200

f. 4 729

What is the size of your number?

What you need:
Cut-out 3.

What to do:
- Play in pairs.
- Each player rolls the thousands (blue), hundreds (red), tens (green) and units (yellow) dice.
- Each player then makes this four digit number with his or her own number cards.
- The winner is the player with the greatest number.
- Do the same activity five times.

Remember zero is a place holder.

<tr>
<td>e. 398</td>
<td>398 + <strong>[ ]</strong> = 400</td>
<td>398 + <strong>[ ]</strong> = 400</td>
</tr>
</tbody>
</table>
**Examples:**

**Example 1:**

\[
5783 + 129 = 5000 + 700 + 80 + 3 + 100 + 20 + 9
\]

\[
= 5000 + 800 + 100 + 12
\]

\[
= 5000 + 900 + 10 + 2
\]

\[
= 5912
\]

**Example 2:**

\[
3247 + 738
\]

\[
= 15 (8 + 7)
\]

\[
70 (40 + 30)
\]

\[
900 (200 + 700)
\]

\[
+ 3000
\]

\[
= 3985
\]

4. **Use both methods above to calculate the following. Write down the steps you use.**

Continue on an extra sheet of paper.
Examples:
Example 1:
8 342 – 2 131
= (8 000 – 2 000) + (300 – 100) + (40 – 30) + (2 – 1)
= 6 000 + 200 + 10 + 1
= 6 211

Example 2:
\[
\begin{array}{c}
8 & 3 & 4 & 2 \\
- & 2 & 1 & 3 & 1 \\
\hline
1 & 0 & \text{(2 – 1)} \\
1 & 0 & \text{(40 – 30)} \\
2 & 0 & 0 & \text{(300 – 100)} \\
- & 6 & 0 & 0 & \text{(8 000 – 2 000)} \\
\hline
6 & 2 & 1 & 1
\end{array}
\]

5. Choose one of the methods above to calculate the following. Write down the steps you use.

a. 7 182 – 61 =  
b. 7 546 – 431 =  
c. 8 764 – 3 451 =  

d. 2 456 – 83 =  
e. 4 658 – 999 =  
f. 8 759 – 4 793 =  

What is the size of your number:  

What you need:  
- Use the 10s, 100s and 1 000s dice made in the previous activity.  
- Piece of paper.  

What to do:  
- Roll the tens (green) dice.  
- Add the number landed on, to the first number on the blue card. Write your addition sum on a piece of paper.  
- Do the same with the next four numbers.  
- Repeat the activity with the 100s and 1 000s dice.  
- Learners check each others’ addition sums.  
- The winner is the person with the most correct answers.  

Repeat the activity using subtraction.
What do multiples and multiplication mean? Use the words to help you to describe them.

Multiples example:
- Some multiples of 2 are 2, 4, 6, 8, 10, 12, 14, 16, 18, ...
- Some multiples of 4 are 4, 8, 12, 16, 20, 24, 28, 32, ...

1. Complete the number board. We have done a few for you.

   a. Colour all the multiples of 2 yellow.

   b. Circle all the multiples of 3.

   c. Make a triangle around the multiples of 4.

2. Estimate the number of fruit. Then write two multiplication sums.

a. 

\[ 12 \quad 4 \times 3 = 12 \quad 3 \times 4 = 12 \]

b. 

c. 

\[ \text{continued} \]
3. Use both methods above to calculate the following. Write down the steps you use.

a. \(24 \times 3 = \)

b. \(52 \times 9 = \)

c. \(23 \times 21 = \)

d. \(46 \times 37 = \)

Continue on an extra sheet of paper.

**Examples:**

**Example 1:**

\[
\begin{align*}
56 \times 5 &= (50 + 6) \times 5 \\
&= (50 \times 5) + (6 \times 5) \\
&= 250 + 30 \\
&= 280

- Piece of paper.

**What to do:**
- Roll a 10s dice and then a 100s dice. Multiply the two numbers. Write down the multiplication sum with the answer.
- Repeat doing this until your teacher says stop.
- Give your sums to your partner to mark.
- The winner is the person with the most correct multiplication sums.
- Do the same activity, but roll the 100s dice twice.

   | 9 \times 2 | 9 + 2 | 6 + 5 | 5 + 6 | 2 + 9 |
   | 7 \times 3 | 8 \times 6 | 8 + 6 | 3 + 7 | 6 - 5 |
Discuss the words “ratio” and “rate”. 

### Ratio

or 6:8

Written as a ratio

### Rate

The chicken cost R50 per kg.

We can also say it costs R50/kg.

1. Answer the following questions.

   a. How many peaches do you see? _________
   
   b. How many bananas do you see? _________
   
   c. What is the ratio of bananas to peaches? _________
   
   d. What is the ratio of peaches to bananas? _________
   
   e. What is the ratio of the peaches to all the fruit? _________
2. Look at the pictures and answer the questions below.

[Image of flowers]

a. How many pink flowers do you count? [Blank]

b. How many yellow flowers do you count? [Blank]

c. How many purple flowers do you count? [Blank]

d. How many white flowers do you count? [Blank]

e. What is the ratio of pink flowers to yellow flowers? [Blank]

f. What is the ratio of yellow flowers to purple flowers? [Blank]

g. What is the ratio of pink flowers to purple flowers? [Blank]

h. What is the ratio of yellow flowers to white flowers? [Blank]

i. What is the ratio of white flowers to pink flowers? [Blank]
3. Look at the questions and answer the questions below.

Write out each statement above using the rate symbol. Then work out how much will double that rate cost.

a. Cheese is R40/kg  
   Double R40 = R40 \times 2 = R80

b. ____________________________

c. ____________________________

d. ____________________________
4. **Cheese: R40/kg**

   a. How much will it cost me to buy 1 kg? 

   b. How much will it cost me to buy 2 kg? 

   c. How much will it cost me to buy 3 kg? 

   d. How much will it cost me to buy 4 kg? 

   e. How much will it cost me to buy half a kilogram? 

5. **If Simon is paid R9/hour to work at the market, how many hours must he work if he wants to make R54?**

Continue on an extra sheet of paper.

---

**Prices**

- Walk around a shop and find 3 items on which they write Rand/cents per kilogram.
- Write down these examples and bring them to class.
### Fractions

Look at the tables and use words such as half, quarter, and eight.

#### 1. Look at the coloured-in circles. Write a division sum for each.

Three circles of cardboard have been cut up in different ways and the pieces from each circle put on a table.

Look at each table and discuss it in a group. What will happen on each table if you put the pieces back together to form a circle?
2. Look at this measuring tape and answer the questions.

![Measuring Tape]

a. What is one half of 24 m? ________ We can say \( 24 \div 2 = 12 \).

b. What is one third of 24 m? ________ We can say \( 24 \div __________ = __________ \).

c. What is one sixth of 24 m? ________ We can say \( 24 \div __________ = __________ \).

d. What is one eighth of 24 m? ________ We can say \( 24 \div __________ = __________ \).

3. Using Cut-out 4 as a guide, fill in whether each of these is <, > or =.

a. \( \frac{1}{2} \quad \square \quad \frac{1}{4} \)  
b. \( \frac{1}{2} \quad \square \quad \frac{1}{8} \)

3. There are eight children at my party. Make drawings to solve your questions.

a. Two cakes are shared equally between eight children. What part of a cake will each child get?

b. Each child gets one eighth of the lollipops. How many lollipops will each child get?

c. How much juice will each child get if you share it equally between them.

Fraction fun at home

- With the help of an adult find as many things as you can at home that are divided into equal pieces. Name the object and say into how many pieces it is divided.
Money problems

Look at the pictures. Discuss what you can do with the money.

1. You and three of your friends collected all your old toys to sell to buy four sports shirts. Each shirt costs R50.

   a. Look above. This is what you sold on the first day. How much did you sell?

   b. How much money do you need to buy all four shirts?

   c. How many shirts can you buy with the money you made on the first day?

   d. How much more do you need to sell to buy the four shirts?
2. After three days you sold everything. You kept a record of what you were selling. Now you need to calculate everything.

- How much does it cost?
- What can you do to get the money?
1. A paper clip is about 3 centimetres long.
Use the paper clip as a measure to make these estimates. Check your
estimates by measuring to the nearest centimetre.

   a. Length of your thumb.  
   b. Width of your maths book. 
   c. Length of a crayon.   
   d. Length of a pencil. 
   e. Length of an envelope. 
   f. Length of an eraser.

2. Use your centimetre ruler. Write the length of each object.

How tall? How long?
- How tall are you?
- How tall is your mother or caregiver?
- How tall is your teacher?
- How tall is your principal?

Which is the longest?
- One third of a metre or one quarter of a metre.
Area and Perimeter

1. Find the area of each shape and write your answers in square units.

2. Draw the shape described.
   a. A red square with an area of 1 square unit.
   b. A green rectangle with an area of 4 square units.

What is mass? Look at the pictures below and discuss it.

Grams and kilograms are metric units used to measure how heavy objects are.

A paper clip weighs about 1g.

A book weighs about 1 kg.

Use a benchmark to estimate the mass of these objects in grams or kilograms. Check each object on a scale.

1. Will you use grams or kilograms to weigh the following:
   a. Paper bag
   b. Shoes
   c. A loaf of bread
   d. Pencils
   e. Scissors
   f. Calculator

2. Use the object on the left to estimate whether the object is heavier or lighter than kilogram or gram.
3. **Look at the scales and answer the questions.**

   a. Which objects weigh less than 700 g?

   b. Which objects weigh between 500 g and 1 kg?

   c. Which is the heaviest object?

   d. What is the total mass of objects A and D?

   e. What is the total mass of objects B and C?

4. **Look at the two containers.**

   Are they the same size? Do they weigh the same?

---

**The winning bag**

- Each learner should gather assorted objects from around the classroom and place them in his or her bag. Fill each bag until it is estimated that it weighs about 1 kilogram.
- Select one class member to weigh each bag. The winner is the learner whose bag weighs closest to 1 kilogram.
- You can repeat the activity by filling the bags with different objects.

   a. How many children like hamburgers in this grade 5 class?
   b. How many children like hotdogs in this grade 5 class?
   c. How many children like sandwiches in this grade 5 class?
   d. Which is the most popular lunch in this grade 5 class?
   e. Which is the least popular lunch in this grade 5 class?

4. **Write 3 headings: Certain to happen, Certain not to happen, Uncertain. Classify each of the following under one of those headings:**
   - Snow in our town or place tomorrow.
   - Hail in our town or place tomorrow.
   - Sneeze with open eyes.
   - I will be a day older this time tomorrow.
   - A woman will be a president of South Africa one day.

**Who is lucky?**

- Play in pairs.
- Use a coin again. Start the game by asking: "Who is lucky?"
- The first player will toss the coin ten times. Before tossing it he or she must guess on which side the coin will land the most often. If the player is correct the player will get 1 point.
- The second player does the same.
- In pairs do this ten times. The player with the highest score is the winner.

- Remember this game is about LUCK!

1. Calculate the following.

Example: Commutative property of addition.

15 + 5 = 52 or 37 + 15 = 52
59 + 368 = 427 or 368 + 59 = 427
87 + 62 = 149 or 62 + 87 = 149

a. 22 + 35 = 35 + 

b. + 8 = + 9

c. 99 + 89 = 89 + 

d. + 75 = + 76

e. 375 + 283 = 283 + 

f. 389 + 742 =  

Example: Associative property of addition.

\[(5 + 4) + 6 = 15\] is the same as \[5 + (4 + 6) = 15\]

\[(35 + 28) + 17 = 80\] is the same as \[35 + (28 + 17) = 80\]

\[99 + (7 + 45) = 151\] is the same as \[(99 + 7) + 45 = 151\]

2. Calculate the following.

a. \[(5 + 7) + 8 = \underline{12} + (7 + 8)\]  
   b. \[(8 + 7) + 6 = 8 + (\underline{15} + 6)\]

c. \[9 + (1 + 4) = (\underline{14} + \underline{5}) + 4\]  
   d. \[(3 + 8) + 7 = \underline{11} + (8 + 7)\]

e. \[(12 + 13) + 11 = 12 + (\underline{25} + 11)\]  
   f. \[20 + (3 + 8) = (\underline{12} + \underline{11}) = \underline{23}\]

i. How many animals and birds were counted in all?

ii. The guide told them that they could expect to see 2 000 animals and birds. How many animals and birds did they not see?

b. A book store had 1 250 books. They bought another 1 200 books. Then they had a sale and sold 1625 books.

i. How many books were on the shelves when the sale started?
What to do:

- Play in pairs.

  - The first player will say: “Add red numbers.” Then the second player can take any two red numbers and add them. If the player is correct, he or she will get one point.

  - The second player will say: “Subtract yellow numbers.” Then the first player makes a subtraction sum with any two yellow numbers.

1. Find the multiples.
   a. Multiples of 10
      
      \[
      \begin{array}{cccccc}
      10 & \times & 1 & \rightarrow & 10 \\
      10 & \times & 2 & \rightarrow & 20 \\
      10 & \times & 3 & \rightarrow & 30 \\
      10 & \times & 4 & \rightarrow & 40 \\
      10 & \times & 5 & \rightarrow & 50 \\
      10 & \times & 6 & \rightarrow & 60 \\
      \end{array}
      \]
      The multiples of 10 are \underline{10}, \underline{20}, \underline{30}, \underline{40}, \underline{50}, \underline{60}.

   b. Multiples of 100
      
      \[
      \begin{array}{cccccc}
      100 & \times & 1 & \rightarrow & 100 \\
      100 & \times & 2 & \rightarrow & 200 \\
      100 & \times & 3 & \rightarrow & 300 \\
      100 & \times & 4 & \rightarrow & 400 \\
      100 & \times & 5 & \rightarrow & 500 \\
      100 & \times & 6 & \rightarrow & 600 \\
      \end{array}
      \]
      The multiples of 100 are \underline{100}, \underline{200}, \underline{300}, \underline{400}, \underline{500}, \underline{600}.

   c. Multiples of 1000
      
      \[
      \begin{array}{cccccc}
      1000 & \times & 1 & \rightarrow & 1000 \\
      1000 & \times & 2 & \rightarrow & 2000 \\
      1000 & \times & 3 & \rightarrow & 3000 \\
      1000 & \times & 4 & \rightarrow & 4000 \\
      1000 & \times & 5 & \rightarrow & 5000 \\
      1000 & \times & 6 & \rightarrow & 6000 \\
      \end{array}
      \]
      The multiples of 1000 are \underline{1000}, \underline{2000}, \underline{3000}, \underline{4000}, \underline{5000}, \underline{6000}.
2. Use both methods to calculate the multiplication sums. Write the steps.

Examples:

Example 1:

43 \times 7

= (40 + 3) \times 7

= (40 \times 7) + (3 \times 7)

= 280 + 21

= 301

Example 2:

\[
\begin{array}{c}
4 & 3 \\
\times & 7 \\
\hline
2 & 1 \\
+ 2 & 8 & 0 \\
\hline
3 & 0 & 1
\end{array}
\]

= (3 \times 7) + (40 \times 7)

a. 16 \times 3 = 

b. 24 \times 4 = 

c. 30 \times 6 = 

d. 54 \times 7 = 

e. 79 \times 9 = 

Continue on an extra sheet of paper.
3. Use both methods to calculate the multiplication sums. Write the steps down.

**Examples:**

**Example 1:**

23 x 14 =

= (20 x 10) + (3 x 10) + (20 x 4) + (3 x 4)

= 200 + 30 + 80 + 12

= 300 + 10 + 10 + 2

= 322

**Example 2:**

2. These are multiples of (extend the pattern).

   a. **30**: 300, 330, 360, 390,

   b. **25**: 125, 150, 175, 200,

   c. **50**: 350, 400, 450, 500,

   d. **100**: 1 000, 1 100, 1 200, 1 300,

   e. **150**: 1 500, 1 650, 1 800, 1 950,
3. Use both methods to solve the sums.

**Examples:**

**Example 1:**

\[
19 \times 23 = (10 + 9) \times (20 + 3) \\
= (10 \times 20) + (9 \times 20) + (10 \times 3) + (9 \times 3) \\
= 200 + 180 + 30 + 27 \\
= 200 + 100 + 80 + 30 + 20 + 7 \\
= 300 + 130 + 7 \\
= 300 + 100 + 30 + 7 \\
= 400 + 30 + 7 \\
= 437
\]

**Example 2:**

\[
\begin{array}{r}
19 \\

20 \times 3 \\
20 \\
180 \\
20 \\
180 \\
20 \\
437
\end{array}
\]

a. 12 \times 19 =  

b. 14 \times 21 =  

c. 17 \times 24 =  

d. 19 \times 27 =  

e. 23 \times 38 =

4. Use the method below to solve the multiplication sums.

**Examples:**

**Example 1:**

\[ 45 \times 62 \]

\[ = (40 + 5) \times (60 + 2) \]

\[ = (40 \times 60) + (5 \times 60) + (40 \times 2) + (5 \times 2) \]

\[ = 2400 + 300 + 80 + 10 \]

\[ = 2000 + 400 + 300 + 80 + 10 \]

\[ = 2000 + 700 + 90 \]

\[ = 2790 \]

---

a. \[ 28 \times 43 = \]

b. \[ 39 \times 48 = \]

c. \[ 46 \times 57 = \]

d. \[ 67 \times 72 = \]

e. \[ 84 \times 93 = \]

1. How many objects do you need to move to make 3 equal groups? Complete the following using the example given.

a. $7 + 8 + 9 = 24$

i. Addition sum: $8 + 8 + 8 = 24$

ii. Multiplication sum: $8 \times 3 = 24$

c. $97 + 98 + 99 = \underline{284}$

i. Addition sum: $97 + 98 + 99 = \underline{284}$

ii. Multiplication sum: $97 \times 3 = \underline{291}$

d. $2000 + 3000 + 4000 = \underline{9000}$

i. Addition sum: $2000 + 3000 + 4000 = \underline{9000}$

ii. Multiplication sum: $2000 \times 3 = \underline{6000}$
2. What can you do to each group of numbers to make them equal? Write down three sums to show what you did.

i. 3, 4, 5

Look at the picture. You have offered to help the teacher to re-arrange the books on the shelves. She only wants 25 books per shelf. She has 200 books. Will she have enough shelf space?

Explain how you got your answer.

1. Complete the following:

Example:

- 320 ÷ 8 is the same as $8 \times 40 = 320$
- 490 ÷ 7 is the same as $7 \times 70 = 490$
- 360 ÷ 6 is the same as $6 \times 60 = 360$

a. 320 ÷ 8 is the same as  

b. 400 ÷ 8 is the same as  

c. 240 ÷ 4 is the same as 

2. Complete the following:

Example:

- 325 ÷ 8 is the same as $8 \times 40 + 5 = 325$
- 496 ÷ 7 is the same as $7 \times 70 + 6 = 496$
- 368 ÷ 6 is the same as $6 \times 60 + 8 = 368$

a. 352 ÷ 8 is the same as  

b. 448 ÷ 8 is the same as  

c. 264 ÷ 4 is the same as  

3. Complete the following:

Example:

- 375 ÷ 8
- $8 \times 40 = 320$. There is 55 left.
- $8 \times 6 = 48$. There is 7 left.
- $375 ÷ 8 = 46$ remainder 8
a. 459 ÷ 8 is the same as  

b. 765 ÷ 8 is the same as  

c. 923 ÷ 4 is the same as 

4. Calculate the following and then test your answer.

Example:
364 ÷ 5
= (300 + 50 + 14) ÷ 5
= (300 ÷ 5) + (50 ÷ 5) + (14 ÷ 5)
= 60 + 10 + 2 remainder 4
= 72 remainder 4

Test your answer:
72 ÷ 5
= 360 + 2 remainder 4
= 364

a. 463 ÷ 5 =  
b. 417 ÷ 7 =  
c. 253 ÷ 6 =

d. 496 ÷ 8 =  
e. 391 ÷ 5 =  
f. 157 ÷ 9 =

By how many minutes did I improve from my first to my fourth race?

5. Calculate the following:

Example: What is 2:45 + 1:10?
Add the hours: 2 + 1 = 3
Add the minutes: 45 + 10 = 55
The answer is 3:55

a. 2:10 + 1:30 =

b. 3:30 + 4:10 =

c. 6:40 + 3:10 =

6. Calculate the following:

Example: What is 2:45 + 1:20?
Add the hours: 2 + 1 = 3
Add the minutes: 45 + 20 = 65
The minutes are 60 or more, so subtract 60 from minutes (65 – 60 = 5 minutes) and add 1 to hours (3 + 1 = 4 hours)
The answer is 4:05

a. 1:10 + 2:55 =

b. 4:40 + 3:30 =

c. 5:30 + 5:40 =
7. Calculate the following:

Example: What is 4:10 - 1:05?
Subtract the hours: $4 - 1 = 3$
Subtract the minutes: $10 - 5 = 5$
The minutes are OK, so the answer is 3:05

a. 1:40 – 1:20 =

b. 7:30 – 4:20 =

c. 2:20 – 1:15 =

8. Calculate the following:

Example: What is 4:10 - 1:35?
Subtract the hours: $4 - 1 = 3$
Subtract the minutes:
$10 - 35 = -25$
The minutes are less than 0, so add 60 to minutes ($60 - 25 = 35$ minutes) and subtract 1 from the hours ($3 - 1 = 2$ hours)
The answer is 2:35

a. 13:10 – 10:15 =

b. 4:20 – 3:30 =

c. 8:30 – 6:40 =

a. What are you going to collect? How will you do it?

b. How will you sort (organise) your data?

c. Draw a bar graph.

d. Read the bar graph. Write a paragraph on your findings.

In pairs, see who can count the tallies the fastest.

What could the possible reason be for these tallies? Create your own scenario. Draw a bar graph to represent your scenario.
What is a polygon? Are all of these polygons? Are these the only polygons there are?

1. Colour in all the quadrilaterals.

2. Answer the following:
   a. Is a rectangle a quadrilateral? Why?

   b. Is a square a quadrilateral? Why?
3. Mark the shape a, b or c. Identify the shapes with:
   a. curved sides only
   b. curved and straight sides
   c. straight sides only

4. Draw five of each. Note that they should look different from the 2-D shapes above.
   a. 2-D shapes with curved sides only.

   b. 2-D shapes with curved and straight sides.

   c. 2-D shapes with straight sides only

5. Find three shapes in nature or your environment with
   • curved sides only
   • curved and straight sides
   • straight sides only
   Make a drawing of each on a separate sheet of paper.
6. Identify the following: Label under each shape.
   Quadrilaterals; Pentagons; Hexagons; Heptagons/septagons.

7. Draw five of each, making sure they look different from the 2-D shapes above

   a. Quadrilaterals

   b. Pentagons

   c. Hexagons
8. Draw the following:

<table>

9. Describe each 2-D shape using the following:

a. Name of polygon  
b. Sides: straight or curved  
c. Sides: same or unequal length, (mark equal sides)
d. Right angles (show them)  
e. Angles smaller than a right angle (show them)  
f. Angles larger than a right angle (show them)

Shape patterns

Draw a pattern using 5 different polygons.

3. Joan used $2,5 \ell$ of water for making coffee, $60,5 \ell$ for doing her washing and $3,5 \ell$ or washing dishes. How much water did she use altogether?

Continue on an extra sheet of paper.
4. Say what is the:
   - capacity of each container
   - volume of the liquid in each container
   - difference between full capacity and volume

   Capacity is...
   Volume is...

   a. Capacity: 500 ml
      Volume: 300 ml
      Difference: 500 ml – 300 ml = 200 ml

   b. Capacity: ____________________________
      Volume: ____________________________
      Difference: _________________________

5. I have a 1 000 ml container. It is filled to the 500 ml mark. What should I do to fill it to full capacity?

   Make drawings to illustrate your answers. Jabu has 1 l and 250 ml of water to water his vegetables. Calculate how much the following people have.

When we want to say $6$ rounded off to the nearest 10, we use the symbol

Rounding off to the nearest ten.

Round off the numbers that end in a digit from 1 to 4 to the previous (lower) ten.
Example: 2 234 rounded off to the nearest ten is 2 230.

Round off numbers that end in a digit from 5 to 9 to the next (higher) ten.
Example: 2 237 rounded off to the nearest ten would be 2 240.

1. Round the following numbers off to the nearest ten using the number lines provided.
   a. 5 948
   b. 3 253
   c. 8 762

Number card fun....

What you need:
- Number (flash) cards from cut-out 2.

What to do:
- Play in pairs.
- Place the cards face down.
- The first player must choose one of each: thousand, hundreds, tens and unit number card cards, and displays them as a number.
- The first player that fills the number up to the next 10 000, gets a point.
- Then player two chooses the cards.
- Repeat five times.
- The player with the highest score is the winner.

4. Solve the following word problems.
   
a. At the soccer match, there were 12 231 men and 7 893 women. How many people were there altogether at the soccer match?

b. Michael is practising for a fun run. The first day he ran 4 189 m and the second day he ran 4 567 m. How far did he run in those two days?

5. Write an appropriate and interesting word sum for 15 000 and 3 000. Solve it.

What is the size of your number?

What to do:
- Individual game against a group or the class.
- Roll the 1 000s dice.
- Add the number landed on, to the first number on the blue card. Write your addition sum on a piece of paper.
- Do the same with the 2nd to the 5th number.
- Learners check each other’s addition sums.
- The winner is the person with the most correct answers.

What you need:
- Use the 1 000s dice you made before. (Cut-out 3)
- Piece of paper.

Adding and subtracting 4-digit numbers

Revise the following:

Show 2 456 with your place value cards.
2 4 5 6
Add 300. Show it again with your place value cards.
2 7 5 6
Add 40 and show it.
2 7 9 6

Show 1 643 with your base ten blocks.

Add 200 and show it again.
Subtract 200 and show it again.

1. Your friend showed 2 345 by drawing base ten blocks. Write a number sentence for what he did.
Add 200.
Subtract 1 000 and show it.

2. Calculate:
Example: Calculate 5 241 + 3 426
5 241 + 3 000 = 8 241 + 400 = 8 641 + 20 = 8 661 + 6 = 8 667
a. 25 806 + 1 153
b. 14 281 + 12 317

3. Calculate:
Example: Calculate 5 362 + 2 486
5 362 + 2 000 = 7 362 + 400 = 7 762 + 80 = 7 842 + 6 = 7 848
This may become difficult when more than two numbers are added.
a. 34 235 + 3 896
b. 46 968 + 21 035

4. Calculate:
Example: Subtracting by breaking down the number to be subtracted.
Calculate 4 687 - 2 143
4 687 - 2 000 = 4 687 - 100 = 2 587 - 40 = 2 547 - 3 = 2 544
This may get difficult if more than two numbers are subtracted.
a. 16 735 - 2 514
b. 29 353 - 17 142

5. Calculate:
Example: Calculate 2 486 + 148
2 486 + 2 000 = 2 686 + 400 = 2 726 + 14 = 2 740 + 18 = 2 758 + 34 = 2 634
a. 3 584 + 147
b. 2 481 + 128
c. 3 672 + 176

6. Calculate:
Example: Calculate 2 696 + 2 387
2 696 + 2 000 = 4 696 + 400 = 5 096 + 387 = 5 483 + 4 = 5 983
a. 2 392 + 1 476
b. 4 594 + 2 274
c. 5 785 + 3 147

   e. R2,55   R1   R2   R1   R0,20   R0,50   R0,20   R0,10   R0,05

2. How much money will I have if I save the following amounts?
   a. R2 + R1 + R5 + R20 = 
   b. 10c + 20c + 20c + 5c = 
   c. 50c + 20c + 50c + 5c + 10c = 
   d. 5c + R5 + 20c + R1 + R2 + 50c = 
   e. 50c + 20c + 5c + R5,50 + 10c + 65c + R10 =

Saving, Buying and Selling

My mom says I need to save money. Why?

Yes! We cannot always get what we want. We need to save money, by putting some money away for a few months.

I can even sell some of my old things if I want to make more money.

Yes! We cannot always get what we want. We need to save money, by putting some money away for a few months.

Five friends talk about saving money.

1. Answer the following questions:

   b. I sold my old bicycle for R150.00 to my friend. I bought myself a new soccer ball for R89.99. How much money did I have left? Show your calculations below.

   c. You sold your soccer jersey for R65.00. You bought some soccer socks for R19.99 and new colour pencils for R23.50. How much money do you have left?

2. You have saved some money. Now you are having a Jumble sale to make some more money so that you can buy what you want. You need to put a price tag on each item you are going to sell. Do this.
   a. How much money have you saved already?
   b. What do you want to buy? What is the price?
   c. How much will you make selling all the items?
   d. Will you have money left over after you buy what you want?

**Fraction Dominoes**

- Use cut-out 5.
- After shuffling the dominoes, each player draws tiles to make up their hand. The number of tiles drawn depends on the number of players.
- The player with the largest fraction starts the game. Play goes to the left (clockwise). Each player adds a domino to an open end of the layout, if possible.
- A player who cannot make a move must pass. The game ends when one player uses the last domino in his or her hand, or when no more plays can be made. If all players still have tiles in their hand, but cannot make any more moves, then the game is said to be “tied”.

Addition and subtraction of fractions with the same denominators

Adding and subtracting fractions

When we add or subtract fractions, the denominators must be the same. Look at the example and explain what it means.

Example: \( \frac{1}{4} + \frac{3}{8} = \)

1. Add the following fractions. Use the example to guide you.

Example: \( \frac{1}{4} + \frac{2}{4} = \frac{3}{4} \)

a. \( \frac{1}{4} + \frac{3}{4} = \) b. \( \frac{2}{4} + \frac{1}{4} = \) c. \( \frac{3}{4} + \frac{1}{4} = \) d. \( \frac{4}{4} + \frac{2}{4} = \)

2. Subtract the following fractions. Use the example to guide you.

Example: \( \frac{3}{4} - \frac{1}{4} = \frac{2}{4} \)

a. \( \frac{3}{4} - \frac{2}{4} = \) b. \( \frac{4}{4} - \frac{3}{4} = \) c. \( \frac{5}{4} - \frac{4}{4} = \) d. \( \frac{6}{4} - \frac{5}{4} = \)

3. Calculate:

a. \( \frac{1}{4} + \frac{2}{4} = \) b. \( \frac{7}{8} - \frac{1}{8} = \) c. \( \frac{10}{12} - \frac{8}{12} = \)

d. \( \frac{5}{8} + \frac{2}{8} = \) e. \( \frac{2}{4} - \frac{1}{4} = \) f. \( \frac{7}{11} + \frac{3}{11} = \)

4. Calculate:

a. \( \frac{2}{4} + \frac{3}{4} = \) b. \( \frac{4}{8} + \frac{5}{8} = \) c. \( \frac{2}{3} + \frac{3}{3} = \)

d. \( \frac{3}{5} + \frac{4}{5} = \) e. \( \frac{4}{6} - \frac{2}{6} = \) f. \( \frac{10}{12} - \frac{8}{12} = \)

5. First count in fractions. Then make hoops on the number line to give the answer of the fraction number sentence.

Example:

\( \frac{1}{3} + \frac{1}{3} + \frac{1}{3} = \frac{3}{3} \) or \( 1 \)

Birthday pizza

At my birthday party, John ate \( \frac{1}{3} \) of the pizza, Tshepo \( \frac{1}{3} \), Zaheeda and Lee \( \frac{1}{3} \).

I had \( \frac{1}{3} \) left. What fraction of the pizza was left?
What is the difference between length and distance?

**Distance** is how far one travels from point A to point B.

**Length** is the distance measured between point A and B.

Use the picture to explain the difference between length and distance.

1. What will you measure with the following measuring instruments?

   a. ____________  
   i. ____________  
   ii. ____________  
   iii. ____________

   b. ____________  
   i. ____________  
   ii. ____________  
   iii. ____________

   c. ____________  
   i. ____________  
   ii. ____________  
   iii. ____________

   d. ____________  
   i. ____________  
   ii. ____________  
   iii. ____________

2. Draw the following lines on a piece of paper using a ruler.

   For example: 10 cm

   a. 5 cm  
   b. 14 cm  
   c. 19 cm  
   d. 21 cm  
   e. 45 cm  
   f. 185 cm  
   g. 270 cm

How long?

   a. We travelled from Johannesburg to Polokwane. What did my father use to measure the distance? ____________
   b. The length of a desk ____________  
   c. The length of a soccer field ____________
   d. The height of a window ____________

10. Round off to the nearest cm. Draw the arrows on the rulers.
   a. 4 mm rounded off is ____ cm.            8 mm rounded off is ______ cm.
   b. 187 mm rounded off is ____ cm.              184 mm rounded off is ______ cm.

11. Round off to the nearest m. Draw the arrows on the rulers.
   a. 650 cm rounded off is ____ m.              620 cm rounded off is ______m.
   b. 6300 mm rounded off is ____ m.     6900 rounded off is ______m.

12. Round off to the nearest m. Draw the arrows on the rulers.
   a. 400 mm rounded off is ___ m.       800 mm rounded off is ___ m.
   a. 6 300 mm rounded off is ____ m.   6 900 rounded off is ____ m.

13. Round off to the nearest km.

= (50 x 100) + (50 x 30) + (50 x 8) + (6 x 100) + (6 x 30) + (6 x 8)
= 5000 + 1500 + 400 + 600 + 180 + 48
= 5000 + 1000 + 500 + 400 + 600 + 100 + 80 + 40 + 8
= 6000 + 1000 + 120 + 8
= 6000 + 1000 + 600 + 100 + 20 + 8
= 7000 + 700 + 20 + 8

Term 2
Multiples and factors

A paper-collecting company visits Linda’s neighbourhood every four days. Unfortunately, she missed it today. When can Linda expect the paper company to visit her neighbourhood again?

The paper company will visit on days 4, 8, 12, 16, 20, 24, and 28 during September 2014.

What can you tell about these numbers, if the first day is on the:
- 1st of September
- 2nd of September
- 3rd of September
- 4th of September

Are all these numbers multiples of 4? Why?

1. Complete the tables.

<td>12 ÷ 3 = 4</td>
<td>3 x 4</td>
</tr>
<tr>
<td>4</td>
<td>12 ÷ 4 = 3</td>
<td>4 x 3</td>
</tr>
</tbody>

   a. \( 70 \times (6 + 5) = \)

   b. \( 50 \times (8 + 2) = \)

   c. \( 60 \times (2 + 3) = \)

4. Calculate the following.

   Example 1:

   \[ 30 \times (2 + 4) = 60 + 120 = 180 \]

   Example 2:

   \[ 2 \times 60 = 120 \]

   a. \( 70 \times (6 + 5) = \)

   b. \( 50 \times (8 + 2) = \)

   c. \( 60 \times (2 + 3) = \)

Shoe sale

The shop sold 64 pairs of shoes at R225 per pair today. How much money did the shop collect?
**Flat or curved surfaces**

What is a face? What is a surface?

A face is any of the individual surfaces of a 3-D object.

- A face is the surface between a number of edges.
- A triangular pyramid has 4 faces. There is one face you cannot see.
- This 3-D object has flat surfaces.

1. Name and describe each of these objects according to their surfaces.

   a. ![Image](image1)
   b. ![Image](image2)
   c. ![Image](image3)

2. What 3-D objects will these flat patterns (called “nets”) make?

   a. ![Image](image4)
   b. ![Image](image5)

3. If you combine a cylinder and cone, what type of surface will you have?

4. Name and describe the surfaces of the following prisms.

   a. ![Image](image6)
   b. ![Image](image7)
   c. ![Image](image8)
   d. ![Image](image9)
   e. ![Image](image10)

5. Describe the shape of the post box.

House designs

What prisms are mostly used in the house designs in your area?
Rectangular prisms and cubes

1. Write the number of objects you see in the picture next to the word.
   - Rectangular prisms: 
   - Cubes: 
   - Cylinders: 
   - Spheres: 

2. Draw the following on the picture:
   a. 2 cubes
   b. 2 rectangular prisms
   c. 2 spheres
   d. 2 cylinders

3. Circle the following:
   a. Prism(s) in blue
   b. Pyramid(s) in orange

4. Say whether each 3-D object is a cube or a rectangular prism.

5. What is the difference between a cube and a rectangular prism? First draw the net of each - this will help you to describe it.

   Cube
   Rectangular prism

Real life ...

On a poster present the following:

Five everyday life objects that are rectangular prisms.
One everyday life object of each:
- Hexagonal prism
- Pentagonal prism

Five everyday life objects that are cubes
1. Use Cut-out 6. Fold the nets (patterns) to make a cube and a rectangular prism. Name the shape of each face.

3. Complete the following:

- Draw a triangle with sides of 7 cm each.
- Draw a hexagon with sides of 3 cm each.

Shape an animal

Create your own picture using each of the shapes at least once: triangle, square, rectangle, pentagon, hexagon, heptagon and circle.
Make one of the following 3D objects using your own cut out polygons.

Example:

- Triangular prism
- Rectangular prism
- Pentagonal prism
- Hexagonal prism
- Octagonal prism

1. Which pyramids will you need as well if you want to create ‘huts’ or ‘houses’ from the above prisms?
   - Triangular prism
   - Rectangular prism
   - Pentagonal prism
   - Hexagonal prism
   - Octagonal prism

2. Trace, enlarge and use the following nets to make 3-D objects and answer the questions on the top of the next page.
   - a. Name the 3-D object
   - b. Describe the faces
   - c. Describe the surface

3. Name three other objects you can design using these 3-D objects.

4. Revise: what is the difference between a 2-D shape and 3-D object?

Create your own net for a pentagonal prism gift box.
Cut, make and decorate it.
Try this activity just for fun.

If you build three squares like this, it takes 12 matches.

These 12 matches can then be arranged in four squares that form one square.

1. Answer the questions.
   a. If this pattern keeps its form, but becomes larger at each stage. What will the next pattern look like?
   b. If a shape or part of a shape is added to each stage. What will the next pattern look like?
   c. Four squares are added to each stage. What will the next pattern look like?

2. Draw the next pattern.

Term 2
Investigate Patterns

Pascal’s triangle
How many patterns can you find?

Why do we say the pattern shows odd and even numbers?
If you add any two odd numbers, will it give you an odd or even answer?

We are going to explore/investigate the triangular numbers in question 1.

1. How many circles will the tenth pattern have? Label each pattern.

First pattern
1 = 1

Second pattern
1 + 2 = 3

1 + 2 + 3 = 6

____________________ = _______

Complete and describe the pattern.

Red beads = 10
Blue beads = 9 + 1 = 10
Green beads = ______
Orange beads = 7 + 3 = ______
Purple beads = 4 + 6 = 10
Yellow beads = 5
10 + 10 + 10 + 5 = _______
Extend, describe and create patterns

1. Complete the diagram based on the pattern above.

2. Draw a growing pattern for:

3. Create and draw your own pattern using the diagram below.

4. Extend the pattern and complete the table.

- Name of pattern: triangular pattern.

- Name of pattern: square pattern.

- Name of pattern: pentagon pattern.

- Name of pattern: hexagon pattern.

What will be the next number in the pattern below? 5, 20, 80, …

5. There are four common directions. Show the different lines of symmetry on the square paper. We did the first one for you.

   a.  
   b.  
   c.  
   d.  

6. Draw lines of symmetry to show these types of line symmetry.

   a.  
   b.  
   c.  
   d.  

You decide.
For each set of shapes, say whether it is reflective symmetry or reflection.
Can you still remember what you did to groups of numbers to make them equal?

**Sign:**

**Date:**

Can you move the numbers to make 3 equal groups?

What operation can you use to determine the total?

Make a drawing of your work.

1. **Complete the following:**
   a. Move the numbers to make 3 equal groups
   b. Write down an addition and multiplication sum for each.
   
   i. 300, 400, 500
   ii. 7000, 8000, 9000
   iii. 8000, 10000, 12000
   iv. 14000, 16000, 18000
   v. 3000, 5000, 7000
   vi. 13000, 15000, 17000

2. **Calculate the following:**
   a. Six groups of 900.
   b. Five groups of 1500.
   c. Twelve groups of 1200.
   d. Fifty groups of 300.
   e. Thirty groups of 80.
   f. A hundred groups of 200.

3. **Calculate the following:**
   a. Share 16000 between 4.
   b. Share 15000 between 3.
   c. Share 12000 between 5.
   d. Share 13000 between 50.
   e. Share 12000 between 30.
   f. Share 18000 between 300.

**Divisibility rules.** These divisibility rules will help you with sharing.

A number is divisible by 2 if the last digit is 0, 2, 4, 6 or 8.
A number is divisible by 3 if the sum of the digits is divisible by 3.
A number is divisible by 4 if the number formed by the last two digits is divisible by 4.
A number is divisible by 5 if the last digit is either 0 or 5.
A number is divisible by 10 if the last digit is 0.

1. Calculate using both methods and check your answers.

Example 1:
884 ÷ 34 =

How many groups of 34 will give me 884?
You say: 20 groups of 34 = 680
You write: 10 x 34 = 340
20 x 34 = 680
30 x 34 = 1 020

Now we need to ask. How many groups of 17 will give me 108?
You say: 6 groups of 34 = 204
You write: 1 x 34 = 34
3 x 34 = 102
4 x 34 = 136
5 x 34 = 170
6 x 34 = 204
7 x 34 = 238

Test your answer:
34 x 26 = (30 + 4) x (20 + 6) = (30 x 20) + (30 x 4) + (4 x 20) + (4 x 6) = 600 + 120 + 80 + 24 = 884

Example 2:
34 x 26 = 20 groups of 34 is 680
20 groups of 34 = 680
6 groups of 34 = 204
6 groups of 34 = 204

1. Test the answers of the first three sums above.
   
   a. 13 +6 = 2 rem 1
   
   Test:
   
   2 x 6 +1 = 12 +1 = 13

2. Divide the following and test your answer.

   Example 1:
   
   a. 448 ÷ 17 =
   
   How many groups of 17 will give me 448?
   
   You say:
   
   10 x 17 = 170
   20 groups of 17 = 340
   30 x 17 = 510
   170 + 340 = 510
   
   Now we need to ask. How many groups of 17 will give me 108?
   
   You write:
   
   1 x 17 = 17
   2 x 17 = 34
   3 x 17 = 51
   4 x 17 = 68
   5 x 17 = 85
   6 x 17 = 102
   7 x 17 = 119
   
   • 20 groups of 17 is 340
   • 30 groups of 17 is 510
   • 510 is too big, so we choose 340.
   • So we can say 20 groups of 17 is 340.
   • We then subtract: 448 - 340 = 108

   • 6 groups of 17 is 102
   • 7 groups of 17 is 119
   • 119 is too big, so we choose 102.
   • So we can say 6 groups of 17 is 102.
   • We then subtract: 108 - 102 = 6
   • 20 groups + 6 groups = 26 groups
   • 448 ÷ 17 = 26 rem 6

   Example 2:
   
   a. 460 ÷ 19 =
   
   Test your answer:
   
   (26 x 17) + 6 = (20 + 6) x (10 + 7) + 6
   = (20 x 10) + (20 x 7) + (6 x 10) + (6 x 7) + 6
   = 200 + 140 + 60 + 42 + 6
   = 200 + 100 + 40 + 60 + 2 + 6
   = 300 + 140 + 8
   = 448

   b. 810 ÷ 25 =

   170
   171
**Division**

**Rules of divisibility:**

2. If the last digit is an even number.
3. If the sum of the digits is divisible by 3, the whole number is also divisible by 3.
4. If the number made by the last two digits is divisible by 4, the whole number is also divisible by 4.
5. If the last digit is 5 or 0, the number is divisible by 5.
6. If the number is divisible by both 3 and 2, it is also divisible by 6.
7. Take the last digit, double it, and subtract it from the rest of the number; if the answer is divisible by 7 (including 0), then the whole number is also divisible by 7.
8. If the sum of the last three digits is divisible by 8, the whole number is also divisible by 8.
9. If the sum of all the digits is divisible by 9, the number is also divisible by 9.
10. If the number ends in 0, it is divisible by 10.
11. Subtract the sum of the even digits from the sum of the odd digits; if the difference, including 0, is divisible by 11, the number is also divisible by 11.
12. If the number is divisible by both 3 and 4, it is also divisible by 12.

**1. Are the following numbers divisible by 3. Show your workings.**

**Example: 2 079**

- Add the digits: 2 + 0 + 7 + 9 = 18
- 18 is a multiple of 3
- So 2 079 is divisible by 3

a. 345 ______________________________________________________________________

b. 651 ______________________________________________________________________

c. 1 263 ____________________________________________________________________

**2. Are the following numbers divisible by 4. Show your workings.**

**Example: 5 324**

- What are the last 2 digits? 24
- 24 is a multiple of 4
- So 5 324 is divisible by 4

a. 532 ______________________________________________________________________

b. 628 ______________________________________________________________________

c. 2 916 ____________________________________________________________________

**3. Are the following numbers divisible by 6. Show your workings.**

**Example: 6 294**

- Is the number a multiple of 2? Yes because it ends on an even number.
- Is the number a multiple of 3? 6 + 2 + 9 + 4 = 21, 21 is a multiple of 3
- So 6 294 is divisible by 6

a. 636 ______________________________________________________________________

b. 508 ______________________________________________________________________

c. 5 912 ____________________________________________________________________

**4. Are the following numbers divisible by 9. Show your workings.**

**Example: 4 572**

- 4 + 5 + 7 + 2 = 18
- 18 is a multiple of 9
- So 4 572 is divisible by 9

a. 252 ______________________________________________________________________

b. 883 ______________________________________________________________________

c. 5 105 ____________________________________________________________________
