Mrs Angie Motshekga,
Minister of Basic
Education

Mr Enver Surty,
Deputy Minister
of Basic Education

These workbooks have been developed for the children of South Africa under the leadership of the Minister of Basic Education, Mrs Angie Motshekga, and the Deputy Minister of Basic Education, Mr Enver Surty.

The Rainbow Workbooks form part of the Department of Basic Education's range of interventions aimed at improving the performance of South African learners in the first six grades. As one of the priorities of the Government's Plan of Action, this project has been made possible by the generous funding of the National Treasury. This has enabled the Department to make these workbooks, in all the official languages, available at no cost.

We hope that teachers will find these workbooks useful in their everyday teaching and in ensuring that their learners cover the curriculum. We have taken care to guide the teacher through each of the activities by the inclusion of icons that indicate what it is that the learner should do.

We sincerely hope that children will enjoy working through the book as they grow and learn, and that you, the teacher, will share their pleasure.

We wish you and your learners every success in using these workbooks.

ENGLISH Book 2

Name:

65 Measuring instruments for mass and weight

What would you weigh with these scales? Are they analogue or digital scales?

a.

b.

c.

d.

1. What would you weigh with the following measuring instruments? Would you weigh it in kilograms or grams?

Type	For measuring:	Kilograms or grams
Bathroom scale 		
Balance scale 		
Kitchen scale 		
Spring scale 		

We use **scales** to measure **mass** and **weight**. Most people use both words as if they are the same, though they are different. The **mass** of an object is how much matter it contains. It does not change. The **weight** of an object changes according to gravity. An objects weighs six times more on earth than on the moon, and weighs nothing in empty space, even though its mass remains the same everywhere.

A **balance scale** measures **mass**. A **spring scale** measures **weight**. On earth both types of scale give us the same approximate reading, so for everyday practical activities we can also use spring scales (such as bathroom and kitchen scales) to measure mass.

2. How would you measure the mass of the following (with what instrument and in grams or kilograms)?

a. A bunch of bananas:

b. Sugar for a cake recipe:

c. A child visiting the clinic:

d. A laptop computer:

3. Answer the following questions.

a. We make use of scales to weigh objects.

i. Is there only one type of scale? _____

ii. Name some of the types of scales we use and what we use them for.

b. Will a bag full of cotton waste have a larger mass than the same size bag half filled with steel nails? _____

c. We use grams (g) and kilograms (kg) when measuring mass.

i. Which unit of measurement do you think we use to measure heavier objects? _____

ii. Which unit of measurement do you think we use for lighter objects? _____

Measuring the ingredients

My mother baked a cake. What did she use to measure the ingredients?

66a Weight

What is a scale? Circle all the measuring instruments used to weigh objects.

What would you weight with each of those measuring instruments?

1. What do we weigh with measuring instruments?

Measuring instrument	Give an example what you can weigh with it
Spring scale	Meat

2. Answer the following:

a. How many grams are there in a kilogram? _____

b. How many grams are there in 2,4 kilograms? _____

c. How many grams are there in 100 kilograms? _____

d. How many kilograms is 23 500 grams? _____

e. How many kilograms is 48 250 grams? _____

3. **What do you see around you that weighs about 1 kilogram? (You may not answer, "1 kilogram packet of sugar etc."!).**

4. **Look at these things. Estimate how much each one weighs.**

a. Tennis ball

_____

b. Medium sized dog

_____

c. Car

_____

d. Sport shoes

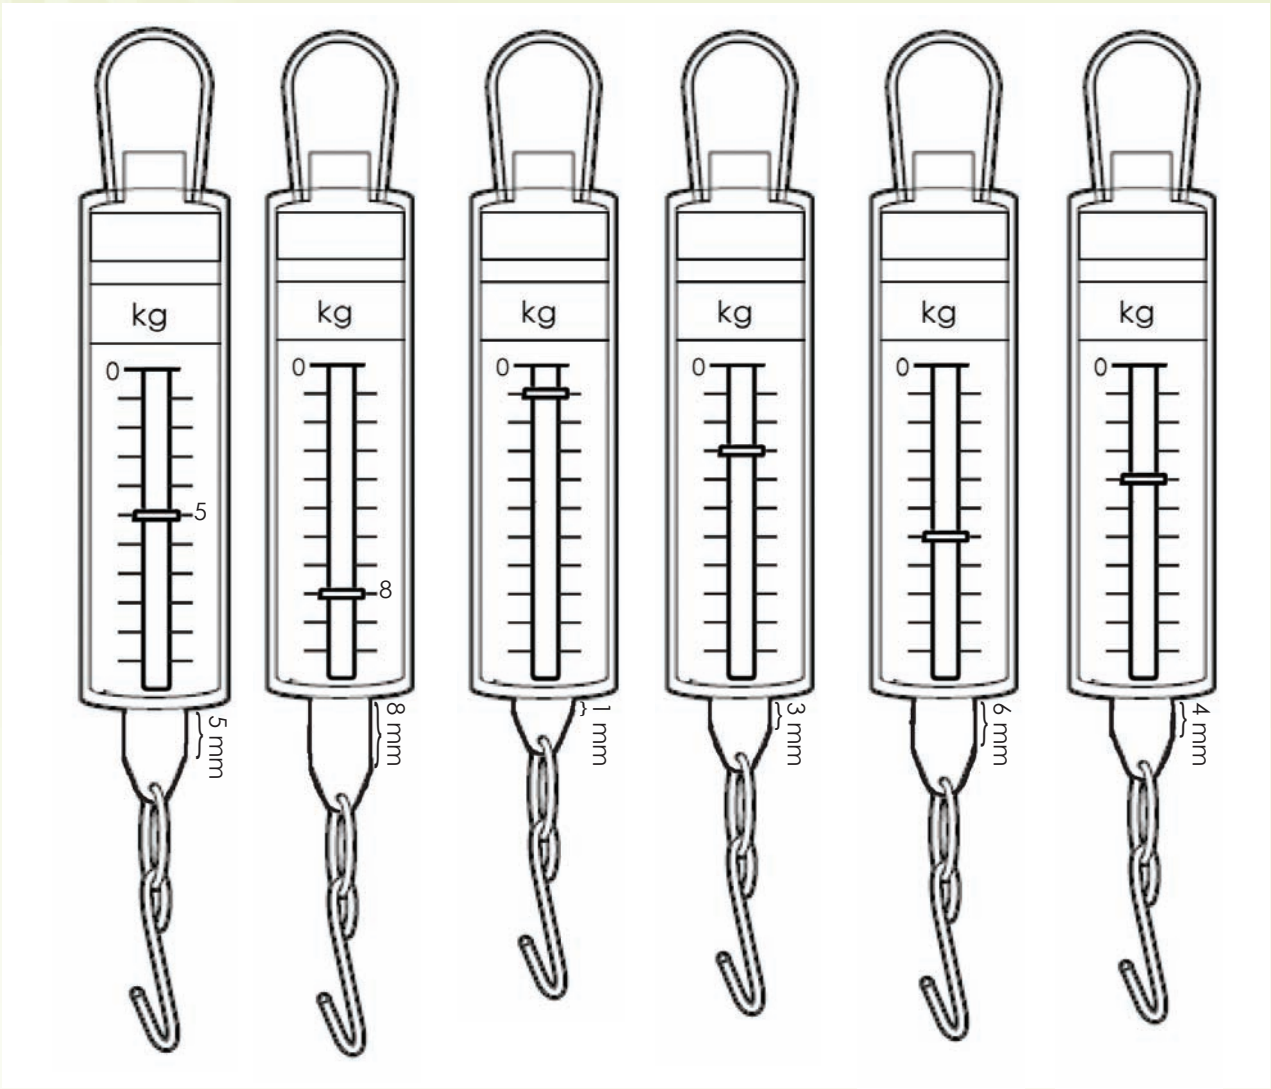
5. Complete the intervals for this spring balance and number them.



6. What is the reading on each of these spring scales?

i. a. _____ b. _____

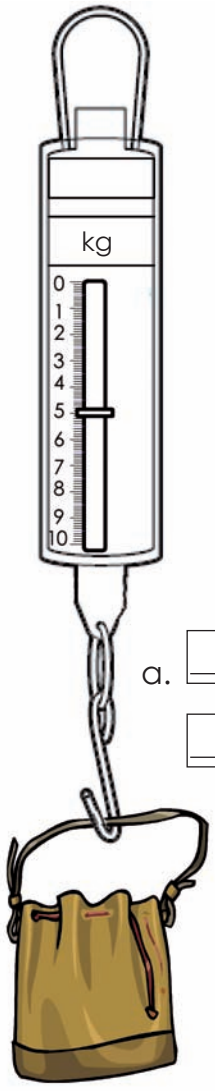
c. _____ d. _____

c. _____ f. _____

ii. 1 kg = _____ mm on the spring balance? _____

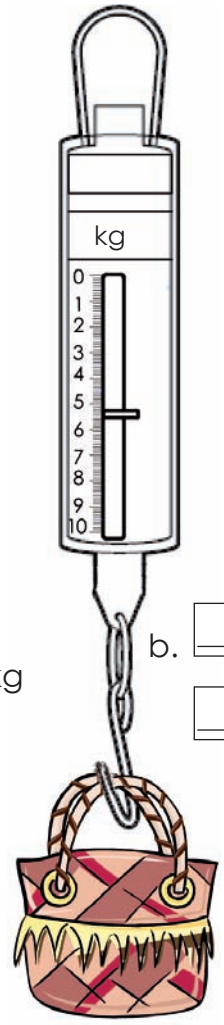
iii. Will this be the same for all spring balances? _____

7. How much does the object weigh on these spring scales?



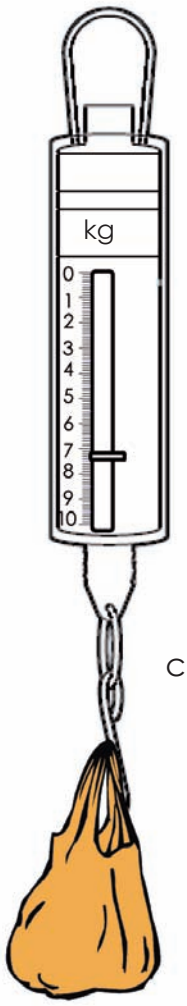
a. _____ kg

_____ g



b. _____ kg

_____ g



c. _____ kg

_____ g

Make your own scales

You can make your own scales from household objects.

You can make a spring scale using a spring and paper clips.

You can make a balance scale as illustrated here.

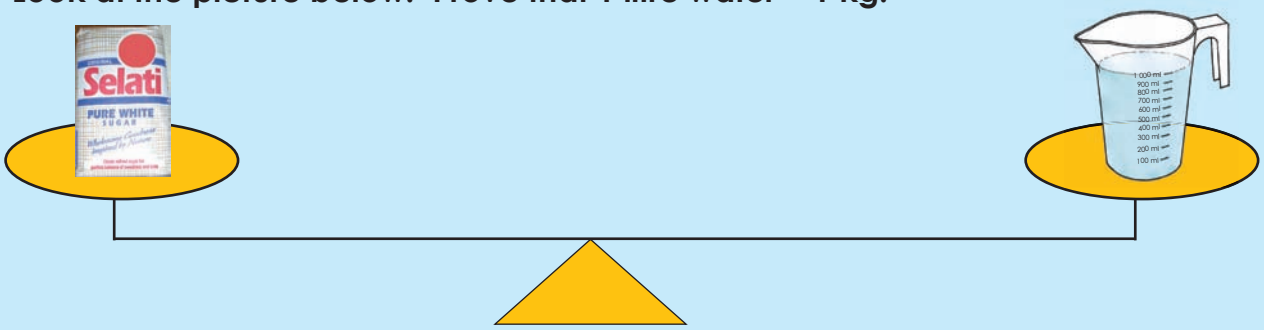
Mass and capacity

Look at the picture below. Prove that 1 litre water = 1 kg.



1. Circle the most appropriate unit to measure each object.

Mass			Capacity		
Truck		mg g kg	Glass of water		ml litre
Book		mg g kg	Water in a basin		ml litre
Insect		mg g kg	Water tank		ml litre
Chicken		mg g kg	Scientific chemicals		ml litre

2. The mass of 1 litre of water = 1 kg. Complete the following:

a. 2 litre of water = _____ kg.

b. 500 ml of water = _____ kg.

c. 250 ml of water = _____ kg.

d. 125 ml of water = _____ kg.

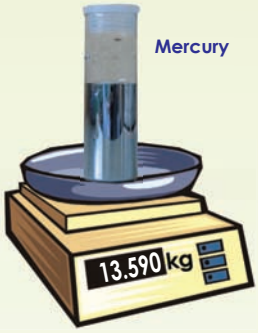
e. 50 ml of water = _____ kg.

f. 2 300 ml of water = _____ kg.

g. 1,5 litre of water = _____ kg.

h. 4,55 litre of water = _____ kg.

3. Complete the table below and answer the questions.



Liquid (1 litre)	Weight	
	Kg	g
Water		
Sea water		
Milk		
Paraffin		
Petrol		
Cooking oil		
Mercury		

a. Which liquid is the lightest? _____

b. Which liquid is the heaviest? _____

c. Why do the mass of these liquids differ?

_____

Some thinking fun …

- With an unlimited supply of water and only two unmarked containers with a capacity of exactly 9 litres and 4 litres.
- How can you measure out exactly 6 litres of water into one or both of these containers?
- What will happen if the task spoke of 9 kg, 4 kg and 6 kg of water instead of litres? Would your answer be the same or different? Why?

68a Solving problems with mass

Revise: go through this summary on solving a problem using the questions as a guide

i. Read and underline the question. What are you looking for in this problem?	ii. Write down the numbers and hidden numbers. Note that sometimes the numbers are written in words.	iii. Write down the key word/s. What basic operation (+, -, x or ÷) will you use?
iv. Cross out the numbers you don't need. What information is not needed in solving this problem?	v. Solve by using pictures, drawings or concrete apparatus. Draw a picture to help you to solve the problem.	vi. Write a number sentence. What numbers and basic operation(s) will you use?
vii. Show all your work. Why did you choose this response?	viii. Does your answer make sense? Try it out. After getting an answer, how can I check to see if it is correct?	

1. Do the following problems in your writing books.

a. A 500 g bag of flour costs R3,50. How much will 1,5 kg cost?

Possible solution:

i. How much will 1,5 kg cost?

ii. The key numbers are 500 g, R3,50 and 1,5 kg.

iii. Addition or multiplication and division

iv. You will need all the numbers in this word problem.

v.  **R3,50**  **R3,50**  **R3,50**

vi. R3,50 + R3,50 + R3,50 = _____ OR 1 500 g ÷ 500 g = 3; 3 x R3,50 = _____

vii. R9 + R1,50 = R10,50

viii. R10,50 ÷ 3 = R3,50

b. My mother uses 7,45 kg of rice out of a 10 kg bag. How much is left?

c. My brother has a mass of 25 kg and my sister is double that. What is my sister's mass?

d. If one cake needs 275 g of self-raising flour, how much flour will I need to make three cakes?

e. A shop sells 40 kg of rice for R450. How much does 1 kg cost?

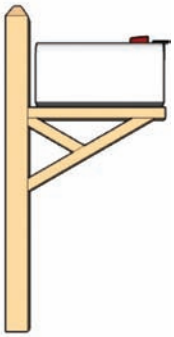
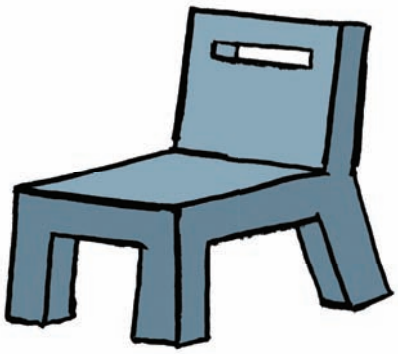
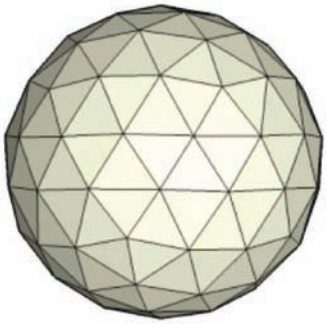
81 Right angles

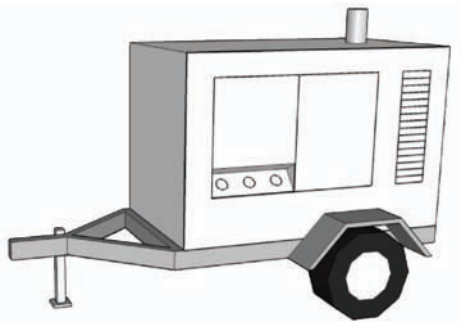
1. Identify the angles that are smaller, bigger and equal to 90°.









Angles smaller than 90 °	Angles bigger than 90 °	Angles equal to 90 °
An angle of less than 90 ° is an acute angle.	An obtuse angle is more than 90 ° but less than 180 °. A reflex angle is more than 180 ° but less than 360 °.	An angle equal to 90 ° is a right angle.

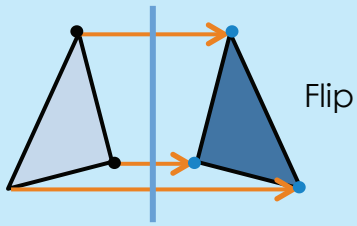
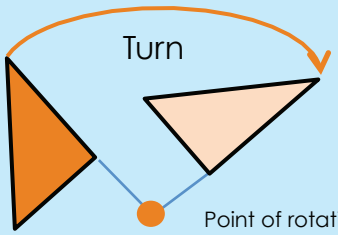
83 Reflection, rotation and translation

Revise the following. Say which shape is the original shape.

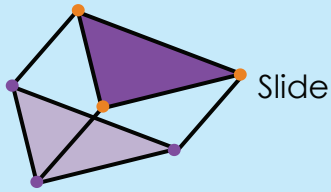
Reflection



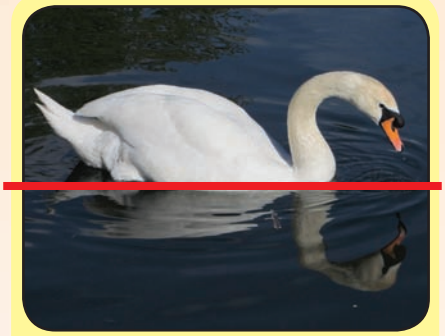
Rotation



Translation



1. In nature we get the most beautiful examples of reflections. Show the line of reflection on each picture and then describe each reflection.



The centre line is called the line of reflection or mirror line.

The line of reflection is horizontal. The reflection of the elephants, trees and island have the same size as the original image.

2. Find a picture on reflection, paste it here and describe it.

2. **Show the centre of rotation and describe each rotation. Here are some words that might help you to describe the rotation: distance from the centre, circle around the centre, point of rotation, angle. Note that in picture b we have two examples**

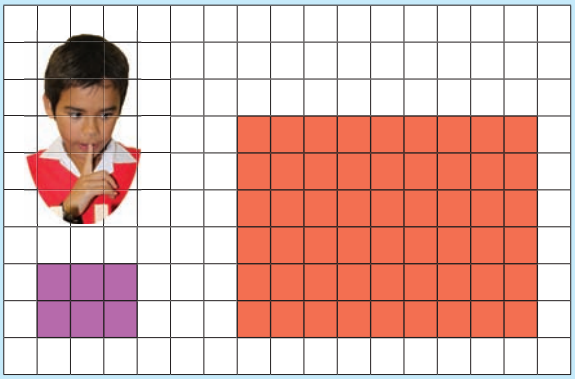
Look at the diagram below. Discuss it in your groups.



Purple rectangle:
The length = 3
The width = 2

Red rectangle:
The length = 9
The width = 6

The length of the **red rectangle** is **3** times more than the **purple rectangle**.

3 x 3 = 9

The width of the **red rectangle** is **3** times more than the **purple rectangle**.

2 x 3 = 6

Therefore, we say that the red rectangle is **enlarged 3 times.**

Temperature scales and displays

Look at the pictures and compare it to the thermometer used in the previous worksheet. Explain how you think each one is used.

We use thermometers to measure the temperature of the air, our bodies, food, and many other things.

There are analogue and digital thermometers. An analogue thermometer shows the temperature directly on a scale or dial; a digital thermometer changes the analogue reading into an electric one shown as numbers on a display screen .

1. Fill in the correct answers

a. Temperature is measured in many different scales, including _____, _____, and _____ scales.

b. The units of the _____ and _____ scales are called degrees; the units of the Kelvin scale are called kelvins.

96 Mean, median and mode

When we have a list of numbers as part of some data, we often find it useful to work out the average number.

I kept a record of last week's materials collected. I wonder what was the average amount of material collected.

Monday	Tuesday	Wednesday	Thursday	Friday
12 kg	2 kg	4 kg	5 kg	2 kg

12 + 2 + 4 + 5 + 2
= 25
= 25 ÷ 5
= 5 kg

So we need to divide 25 by 5 to get the average, because we have five days.

There are three different types of average: the mean, the median and the mode. We are calculating the mean here.

Calculate the average (mean) of the following:

- 25, 15, 20, 9, 11 and 10
- 50, 1 000, 250, 350, 100, 500, 200, 700, 600, and 300
- 1,5; 2,7 and 4,2
- 36, 40, 80 and 100
- 21, 70, 35, 14, 63, 77 and 28

To first put the numbers in order of size makes it easier to work out the average.

After calculating the averages, say which numbers are above and which are below the mean.

Example: recycling material example above
5 kg was the average for the week.

- Monday was above the average for the week
- Tuesday, Wednesday and Friday were below the average for this week.

1. Use the tables to answer the questions.

100a Converting between lengths

- Show 98 mm on the ruler.
- Show where it says cm.
- How many cm is it?

We can sometimes record measurements in centimetres and fractions of centimetres, e.g. the eraser is $2\frac{1}{2}$ cm long. This is easy to do because on a ruler, the fifth millimetre gradation line is normally longer. Once you have learnt, from reading commercial mass and capacity packaging, that $2\frac{1}{2}$ is the same as 2,5, you will also be able to use the decimal, 5 in your recording, i.e. 2,5 cm long.

1. First do the practical activity and then write the following in cm and mm and then cm only.

Show 65 mm on the ruler.

Example: 65 mm = 6 cm and 5 mm or $6\frac{1}{2}$ cm or 6,5 cm

a. 98 mm = _____ b. 57 mm = _____

c. 74 mm = _____ d. 66 mm = _____

e. 85 mm = _____ f. 49 mm = _____

2. Write the following as mm.

Show $9\frac{1}{2}$ cm on the ruler.

Example: $9\frac{1}{2}$ cm or 9 cm and 5 mm = 95 mm

a. $9\frac{1}{2}$ cm = _____ b. $5\frac{1}{2}$ cm = _____

c. $7\frac{1}{2}$ cm = _____ d. $4\frac{1}{2}$ cm = _____

e. $8\frac{1}{2}$ cm = _____ f. $6\frac{1}{2}$ cm = _____

3. Write the following in m and cm. Example: 786 cm = 7 m and 86 cm

Measurement problem solving

1 whole			
$\frac{1}{2}$	$\frac{1}{2}$		
$\frac{1}{3}$	$\frac{1}{3}$	$\frac{1}{3}$	
$\frac{1}{4}$	$\frac{1}{4}$	$\frac{1}{4}$	$\frac{1}{4}$

- $\frac{1}{2}$ and $\frac{1}{2}$ = 1 whole
- $\frac{1}{4}$ and $\frac{1}{4}$ = $\frac{1}{2}$
- $\frac{1}{4} + \frac{1}{4} + \frac{1}{4} + \frac{1}{4}$ = 1 whole

We are going to add, subtract, multiply and divide with length.

1. First work through these examples and then solve the problems

Example 1:
I bought 4 200 mm and then 3 300 mm of string. How much string did I buy? Write down your answer in mm and cm and then in m.

4 200 mm + 3 300 mm
= 4 000 mm + 3 000 mm + 200 mm + 300 mm
= 7 000 mm + 500 mm
= 7 500 mm

m and cm : 7 m 500 mm

Example 2:
I bought $7\frac{1}{2}$ m of ribbon. I used $3\frac{1}{2}$ m. How much ribbon do I have left?

1 000 km – (530 km 500m)
= 470 km – 500 m
= 469 km 500 m or 469,5 km

a. I bought 4 600 mm of string and then 2 800 mm more. How much string did I buy? Write down your answer in mm and cm, and then in m.

b. I bought 9 m of ribbon. I used $3\frac{1}{2}$ m. How much ribbon do I have left? Write your answer in m.

c. My father's desk is 3 300 mm long and mine measures 6 200 mm How much longer is my desk than my father's desk? Write down your answer in m and cm, and then in m.

110a Multiplication and rounding off

Revise: What do you notice in each block?

Round the numbers off to the nearest 10.

- 7 ≈ 10
- 31 ≈ 30
- 617 ≈ 620
- 2 532 ≈ 2 530

Round the numbers off to the nearest 100.

- 83 ≈ 100
- 739 ≈ 700
- 421 ≈ 400
- 6 735 ≈ 6 700

Round the numbers off to the nearest 1 000.

- 476 ≈ 0
- 502 ≈ 1 000
- 3 509 ≈ 4 000
- 6 329 ≈ 6 000

1. Round the numbers off to the nearest 10, 100 and 1 000.

	Nearest 10	Nearest 100	Nearest 1 000
a. 3 879			
b. 9 304			
c. 4 673			
d. 2 214			
e. 2 387			

2. Multiply the numbers by rounding off the first number (multiplier) to the nearest 1 000 and the second number (multiplicand) to the nearest 100.

Birthday money

My mother sells birthday hampers. In each hamper is chocolate worth R25, candy worth R22 and toffees worth R18. The box for the sweets costs R5. My mother adds another R20 for making it and for her delivery cost. She sold R2 320 worth of hampers last year. What was the total amount of money my mother received?

Multiplication and the distributive property

Revise the distributive property.

$6 \times (5 + 3) = (6 \times 5) + (6 \times 3)$
$6 \times 8 = 30 + 18$
$48 = 48$

Method 1:
$(4 + 6) \times (5 + 7)$
$= (4 \times 5) + (4 \times 7) + (6 \times 5) + (6 \times 7)$
$= 20 + 28 + 30 + 42$
$= 120$

            = 51 512
+321 950  → 50 x 6 439
            = 50 x (6 000 + 400 + 30 + 9)
            = 300 000 + 20 000 + 1 500 + 450
            = 321 950
+643 900  → 100 x 6 439
1 0 17 026

Apples and students

- A farmer planted 3 650 apple trees in a row. He planted 135 rows. How many trees did he plant?
- 3 758 students enrolled In a college. They had to pay R450 for admission fees. How much money did the students pay altogether?

Let us revise!

A ratio shows the relative sizes of two or more values. Ratios can be shown in different ways. Using the ":" to separate example values, or as a single number by dividing one value by the total. We can have "part-to-part" and "part-to-whole" ratios.

Example:

Here are six numbers, some odd and some even.

Part to part:

5 678 5 676 5 675 5 671 5 677 5 673

The ratio of **even numbers** to **odd numbers** is 2:4 or $\frac{2}{4}$

Remember that $\frac{2}{4}$ in its simplest form will be $\frac{1}{2}$

The ratio of **odd numbers** to **even numbers** is 4:2 or $\frac{4}{2}$

Remember that $\frac{4}{2}$ in its simplest form will be $\frac{2}{1}$ or 2

Part to whole:

The ratio of even numbers to all the numbers is 2:6 or $\frac{2}{6}$

Remember that $\frac{2}{6}$ in its simplest form will be $\frac{1}{3}$

The ratio of odd numbers to all the numbers is 6:2 or $\frac{6}{2}$

Remember that $\frac{2}{6}$ in its simplest form will be $\frac{1}{3}$

1. Write four ratios for each statement. We have done the first one for you.

a. There are 8 puppies, 6 are male, and 2 are female.

i. 6 male to 2 female (6:2) part to part

ii. 2 female to 6 male (2:6) part to part

iii. 6 male to all (6:8) part to whole

iv. 2 female to all (2:8) part to whole

b. A recipe for pancakes uses 3 cups of flour and 2 cups of milk.

i. ii.

iii. iv.

c. You need to make pancakes for 4 times the quantity above. Write down four new ratios.

i. ii.

iii. iv.

2. Read the following and discuss. Take a 4-digit number with no repeating digit. 1234. It has 24 possible combinations using each digit only once.

1234, 1243, 1324, 1342, 1423, 1432, 2134, 2143, 2314, 2341, 2413, 2431, 3124, 3142, 3214, 3241, 3412, 3421, 4123, 4132, 4213, 4231, 4312, 4321

a. How many of these **combinations** are prime numbers. Check the number sentences with a calculator. We gave you five possible answers.

a. 1234 = 2 x 617
b. 2134 _____
c. 1243 = 11 x 113
d. 2143 _____
e. 1324 = 2 x 2 x 331
f. 2314 _____
g. 1342 = 2 x 11 x 61
h. 2341 _____
i. 1423 is a prime number
j. 2413 _____
k. 1432 _____
l. 2431 _____
m. 3124 _____
n. 4123 _____
o. 3142 _____
p. 4132 _____
q. 3214 _____
r. 4213 _____
s. 3241 _____
t. 4231 _____
u. 3412 _____
v. 4312 _____
w. 3421 _____
x. 4321 _____

3. How many of these 24 combinations in question 2 can be divided by 2 and 4? Work out a set of ratios as shown below.

Example: All the numbers ending with an even number is divisible by 2. There are 12 numbers divisible by	**Divisible by 2 (12 numbers)**	**Divisible by 4**
a. What is the ratio of the numbers **not divisible by 2 (or 4) to all the numbers divisible by 2 (or 4)**? [part to part]	12:12	
b. What is the ratio of the numbers **divisible by 2 (or 4) to all the numbers not divisible by 2 (or 4)**? [part to part]	12:12	
c. What is the ratio of numbers **not divisible by 2 (or 4) to all the numbers**? [part to whole] • Write it as a fraction? • Write it as a percentage?	12:24 $\frac{12}{24}$ or $\frac{1}{2}$ 50 %	
d. What is the ratio of numbers **divisible by ____ to all the numbers**? [part to whole] • Write it as a fraction? • Write it as a percentage?	12:24 $\frac{12}{24}$ or $\frac{1}{2}$ 50 %

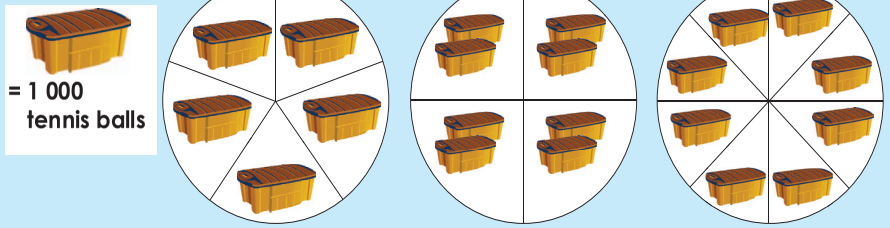
Use the 5-digit number 12 345 and show which numbers have a ratio of $\frac{1}{4}$ to the total of all numbers?

Proportional sharing

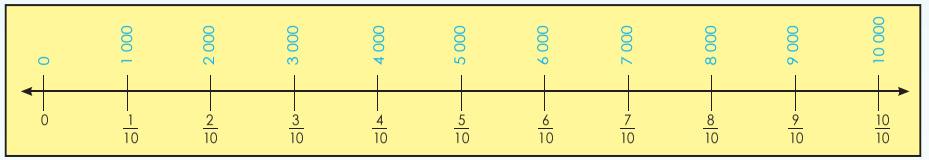
There are 1 000 tennis balls in each container. How many tennis balls are in each circle?



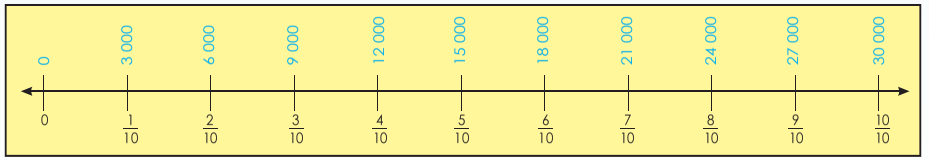
1. Look at the fraction circles above and answer the questions.

a. What is $\frac{1}{5}$ of 5 000? _____
b. What is $\frac{2}{5}$ of 5 000? _____
c. What is $\frac{3}{5}$ of 5 000? _____
d. What is $\frac{4}{5}$ of 5 000? _____
e. What is $\frac{1}{4}$ of 8 000? _____
f. What is $\frac{2}{4}$ of 8 000? _____
g. What is $\frac{3}{4}$ of 8 000? _____
h. What is $\frac{1}{8}$ of 8 000? _____
i. What is $\frac{2}{8}$ of 8 000? _____
j. What is $\frac{3}{8}$ of 8 000? _____
k. What is $\frac{4}{8}$ of 8 000? _____
l. What is $\frac{5}{8}$ of 8 000? _____
m. What is $\frac{6}{8}$ of 8 000? _____
n. What is $\frac{7}{8}$ of 8 000? _____

2. Look at the number line and answer the questions below.



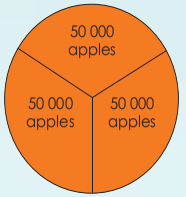
a. What is $\frac{2}{10}$ of 10 000? _____
b. What is $\frac{7}{10}$ of 10 000? _____
c. What is $\frac{9}{10}$ of 10 000? _____
d. What is $\frac{5}{10}$ of 10 000? _____



e. What is $\frac{2}{10}$ of 30 000? _____
f. What is $\frac{6}{10}$ of 30 000? _____
g. What is $\frac{8}{10}$ of 30 000? _____
h. What is $\frac{5}{10}$ of 30 000? _____

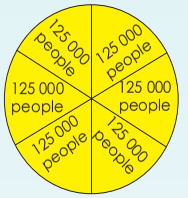
3. Use the fraction circles to answer the following:

a. Total apples transported to the market in 3 months.



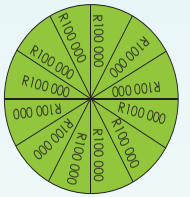
i. How many apples were transported to the market? _____
ii. What is $\frac{1}{3}$ of the apples? _____
iii. What is $\frac{2}{3}$ of the apples? _____

b. Total of people visiting an exhibition for 6 days.



i. How many people in total visited the exhibition? _____
ii. What is $\frac{1}{6}$ of the people? _____
iii. What is $\frac{2}{6}$ of the people? _____
iv. What is $\frac{3}{6}$ of the people? _____
v. What is $\frac{4}{6}$ of the people? _____
vi. What is $\frac{5}{6}$ of the people? _____

c. The total amount of goods they sold in one year.



i. What is the total amount of goods sold per year? _____
ii. What is $\frac{2}{12}$ of the total amount? _____
iii. What is $\frac{6}{12}$ of the total amount? _____
iv. What is $\frac{9}{12}$ of the total amount? _____
v. What is $\frac{11}{12}$ of the total amount? _____

4. If I buy R200 worth of goods and they say I got less than $\frac{3}{4}$ of the price .

How much did I pay for the goods? _____

Number line fractions

Draw a number line that starts at 0 and ends at 1. Place the following on the number line: $\frac{3}{10}$, 20%, $\frac{2}{3}$ and 0,5.

Addition and subtraction of common fractions

Work through these two examples and then answer the questions.

Example 1:

$\frac{4}{10} + \frac{4}{10} = \frac{8}{10}$ $\quad\quad$ $\frac{8}{10} - \frac{4}{10} = \frac{4}{10}$

Don't forget that the denominator stays the same and only the numerator is added or subtracted.

Example 2:

$\frac{1}{2} + \frac{2}{8} = \square$

$\frac{1}{2} + \frac{2}{8}$

$= \frac{1}{2} \times \frac{4}{4} + \frac{2}{8}$

$= \frac{4}{8} + \frac{2}{8}$

$= \frac{6}{8}$

$\frac{1}{2} - \frac{2}{8} = \square$

$\frac{1}{2} - \frac{2}{8}$

$= \frac{1}{2} \times \frac{4}{4} - \frac{2}{8}$

$= \frac{4}{8} - \frac{2}{8}$

$= \frac{2}{8}$

The first thing we need to do is make sure that the denominators are the same. They are not, so now we need to find multiples of both the denominators.

Remember when we change the denominator, we change the numerator as well, because **what we do to the bottom, we have to do to the top.**

1. Add the following.

a. $\frac{3}{6} + \frac{2}{6} =$

b. $\frac{3}{10} + \frac{5}{10} =$

c. $\frac{6}{9} + \frac{2}{9} =$

d. $\frac{2}{3} + \frac{1}{2} =$

e. $\frac{5}{7} + \frac{4}{14} =$

f. $\frac{2}{8} + \frac{5}{6} =$

2. Subtract the following.

a. $\frac{6}{9} - \frac{2}{9} =$

b. $\frac{8}{10} - \frac{6}{10} =$

c. $\frac{8}{12} - \frac{5}{12} =$

d. $\frac{2}{3} - \frac{4}{12} =$

e. $\frac{3}{4} - \frac{4}{16} =$

f. $\frac{8}{9} - \frac{1}{2} =$

3. Fill in the missing information.

a. $\frac{1}{4} \square \frac{1}{4} = \square$

b. $\square \frac{1}{5} = \frac{3}{5}$

c. $\frac{4}{7} + \square = \frac{15}{21}$

d. $\frac{1}{4} + \square = \frac{6}{8}$

e. $\frac{2}{4} + \square = \frac{4}{4}$

f. $\frac{1}{8} + \frac{3}{16} = \square$

g. $\square + \frac{3}{6} = 1$

h. $\frac{1}{2} + \frac{5}{29} = \square$

i. $\frac{2}{4} + \square = \frac{15}{24}$

James saves R1 565 for a game. When he gets to the shop it is discounted by $\frac{2}{5}$. How much money does he save?

What is the question? How much money does he save?

What are the numbers or fractions? R1 565 and $\frac{2}{5}$

What is the key word? I am going to use sharing. ☐

What will the number sentence be? $\frac{2}{5}$ of R1 565 =

Possible drawing: I will first start to share R1 565 between 5.

I will then circle $\frac{2}{5}$ of the purses and add the money. R313 + R313 = R623
James saved R623.

c.

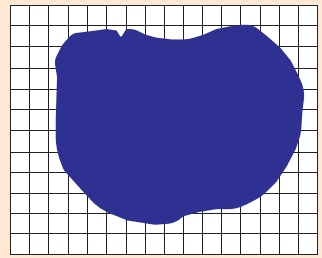
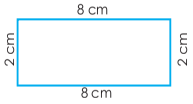
What is the size of the dam?



Area and perimeter

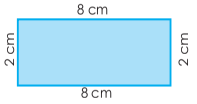
Read about perimeter and area below.

Perimeter is the distance around a 2-D shape.



The perimeter of this rectangle is
8 cm + 8 cm + 2 cm + 2 cm
= 20 cm

Area is the amount of space inside the perimeter.



The area covered by this shape is
2 cm x 8 cm
= 16 cm2

1. Calculate the perimeter and area of the following rectangles.

a.

Perimeter **Area**

b.

Perimeter **Area**

c.

2. Calculate the perimeter and area of the following rectangles:

a. Length: 10 cm; Width: 8 cm

Perimeter **Area**

b. Length: 25 cm; Width: 20 cm

Perimeter **Area**

3. If you have a rectangle with the following area, what could its length and breadth (width) be? What is the perimeter?

a. Area = 72 square metres (m^2).

Length and breadth **Perimeter**

b. Area = 108 m^2

Length and breadth **Perimeter**

4. Themba has a small garden with a perimeter of 30 metres and an area of 30 square metres. He wants to double the dimensions of his garden next year. What will be the new perimeter and new area of his larger garden? Show the calculations.

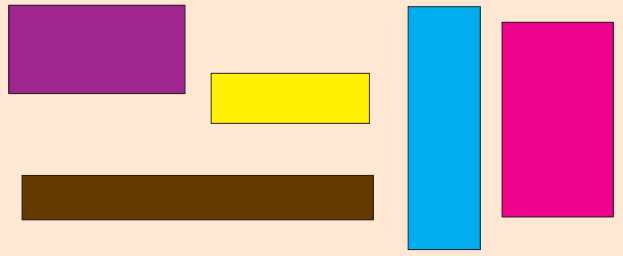
Perimeter search

How to play:
Play in pairs. Search for any 5 rectangular shapes in your classroom. First guess what the perimeter is and then measure it. The person that guesses the closest gets one point. The person with the most points is the winner.



Calculate the following:

5 (3 + 4) = ☐	90 ÷ ☐ x 0 = 0	7 + 3 + 2 ÷ 2 = ☐	25 x ☐ ÷ 5 = 5
35 ÷ 5 x 1 = ☐	50 x ☐ ÷ 25 = 25	☐ ÷ 5 + 0 = 100	4 + 5 ÷ 3 = ☐

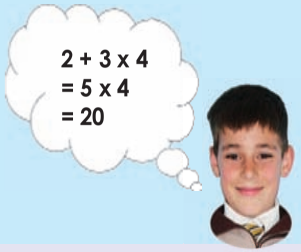
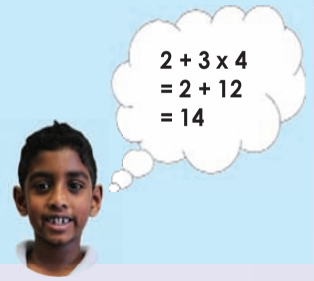
Order of operations

Who has the correct answer? Tick the answer that is correct and explain why.

2 + 3 x 4





1. Do the operation marked in blue first. Compare your answers.

22 + 43 – 15 =	15 x 8 + 6 =
22 + 43 – 15 =	15 x 8 + 6 =
24 – 12 ÷ 6 =	2 x 80 ÷ 4 =
24 – 12 ÷ 6 =	2 x 80 ÷ 4 =

2. Follow the BODMAS order of operation to calculate each of the following:

	Stands for:
B	Brackets
O	Orders (powers and square roots)
D	Division and
M	Multiplication (left-to-right)
A	Addition and
S	Subtraction (left-to-right)

Term 4

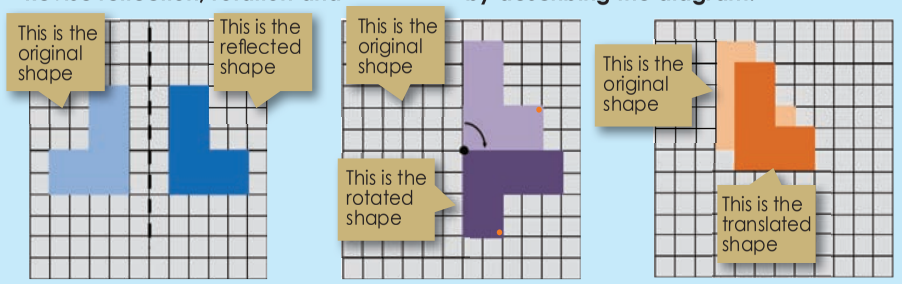
Transformations: reflection, rotation and translation

Revise reflection, rotation and translation by describing the diagram.

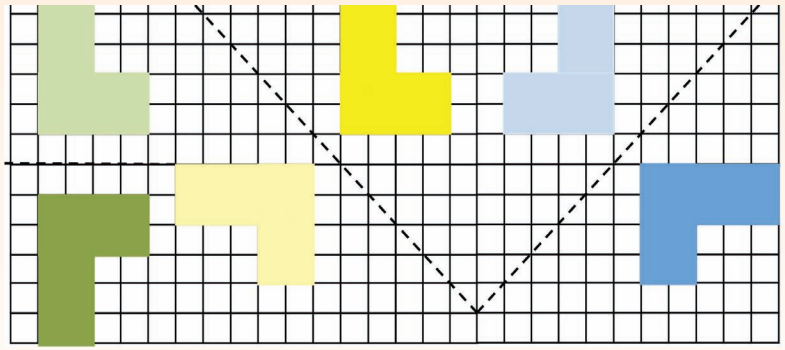


Words that might help you to describe the transformations.

mirror, shape, original shape, line of reflection, and vertical	rotated or turned, clockwise, anti-clockwise, point of rotation, and distance	shape, slide, one place to another, no turning, left, right, up, down,

1. In the first example above, the shape is reflected over a vertical line of reflection. Describe the lines of reflection in the following diagram.

a. b. c.



a. _____

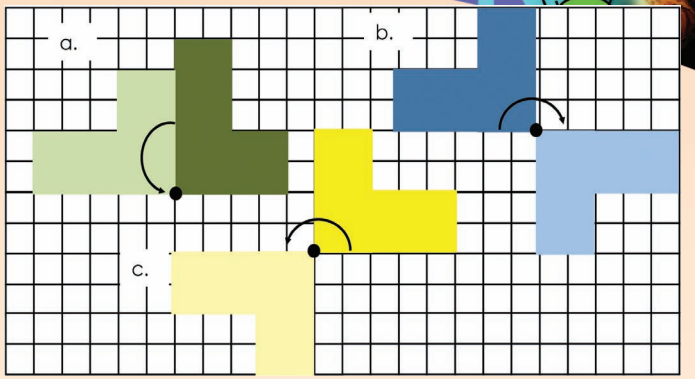
b. _____

c. _____

d. Describe the **reflection** between the dark yellow and the light blue shape. Draw the line of reflection.

_____

2. The blue shape in second example in the introduction was rotated 90 ° clockwise. Describe the following rotations:



a. _____

b. _____

c. _____

3. The orange shape in the third example in the introduction is translated one block to the left and one block up. Look at the diagram in question 2 and describe the translation of the following:

a. The dark blue shape to the light green shape.

_____

b. Translate the light blue shape 4 blocks down and 3 blocks to the left. Make a drawing.

4. Look at the diagram in question 2 and describe the following:

a. The light green shape was reflected and translated to the dark yellow shape.

_____

b. The dark yellow shape was reflected and translated to the light blue shape.

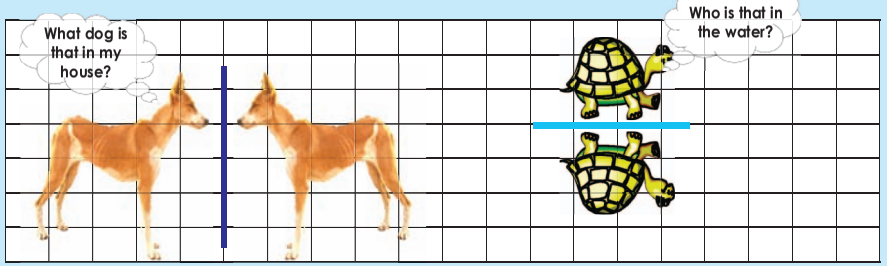
_____

Pentominoes and other shapes

a. Can you work out why the set of twelve shapes are called called pentominoes.
b. Why can I not use the diagram on the right to describe translation, reflection and rotation?

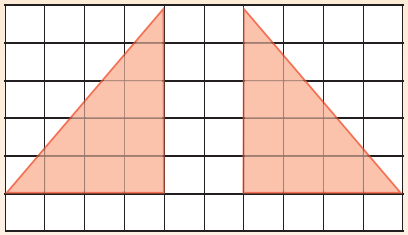
Reflection: flip, turn and slide

What can you tell about these animals? Make up a short story.

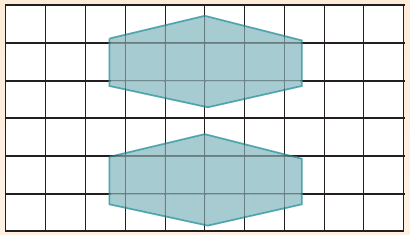


1. Draw the reflection line for each pair.

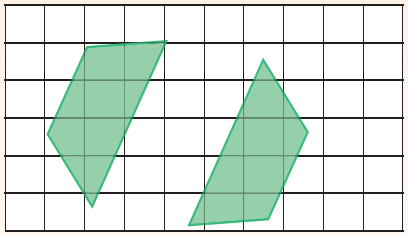
a.



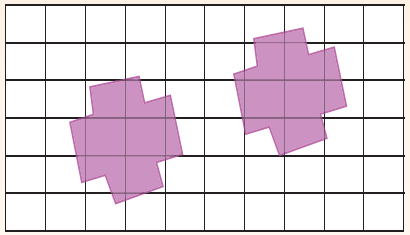
b.



c.

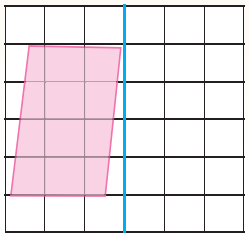


d.

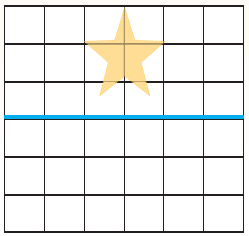


2. Draw the reflection image for each.

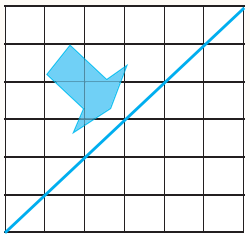
a.



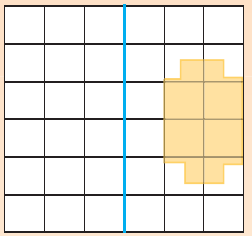
b.



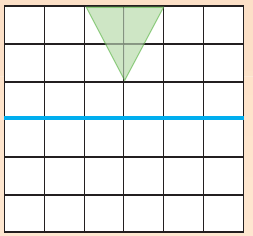
c.



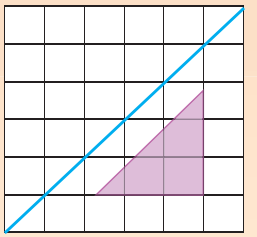
d.



e.

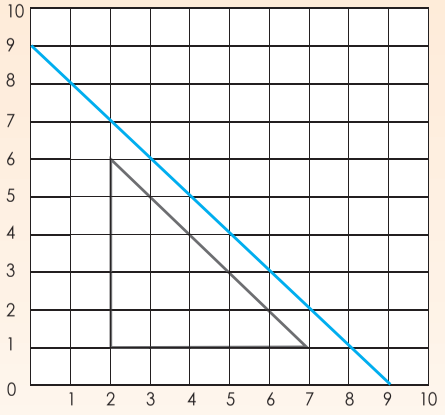


f.

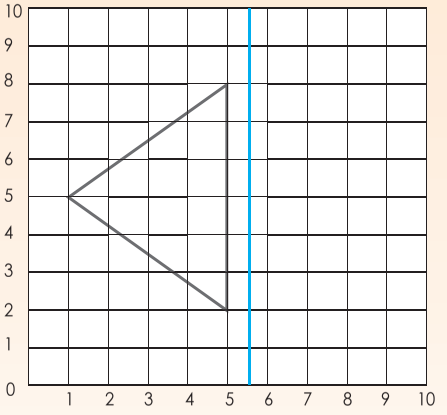


3. Draw the reflection of each figure, then write the coordinate of each new figure.

a. Triangle: (2,6); (2,1); (7,1)

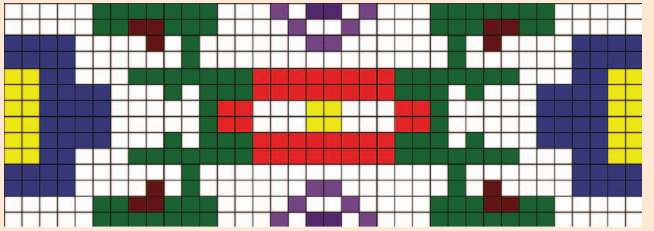


b. Triangle: (5,8); (1,5); (5,2)



An art pattern

Identify the reflections in this pattern.



Reflection

Why do we say the line of reflection is like looking in a mirror?

1. Look at these images. Label the "line of reflection" or the "line of symmetry".

a. 	b. 	c. d. 	e. 	f. 
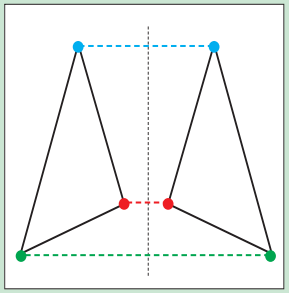
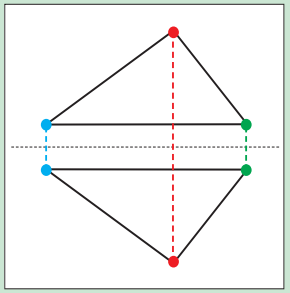
2. We can have a horizontal reflection or a vertical reflection. Look at the examples and then answer the questions.



Horizontal reflection
(flips across)



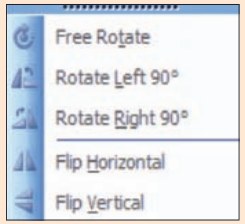
Vertical reflection
(flips up/down)

i. Draw the line of reflection.
ii. Say if the refection is horizontal or vertical.

a. _____ 	b. _____ 	c. _____ 
d. _____ 	e. _____ 	f. _____ 
3. Draw four figures, two showinag horizontal reflection and two showing vertical reflection.

a.	b.
d.	e.

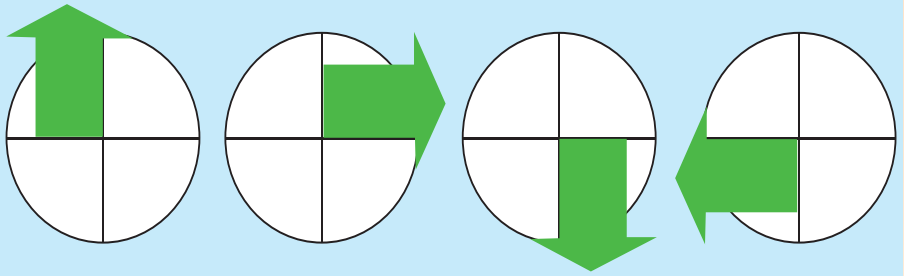
My computer and flip



You are busy drawing a picture with a computer.
You want to make a mirror image of your picture.
You look at this menu on the computer.
Explain what the bottom two instructions mean.
You can make a drawing while you explain it.

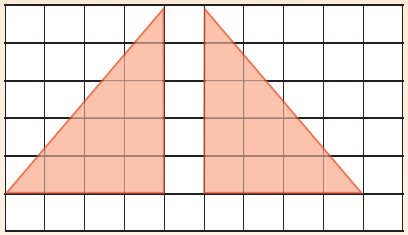
Rotation: turn

What happens to the arrow? Make use of fractions to explain your answer.

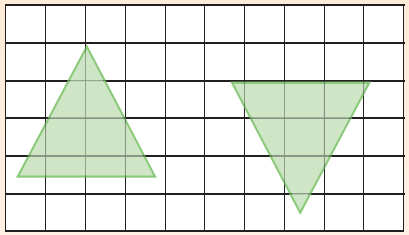


1. Say if it is a half or quarter turn of each image.

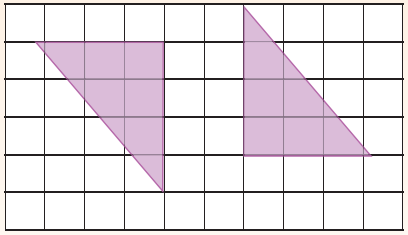
a.



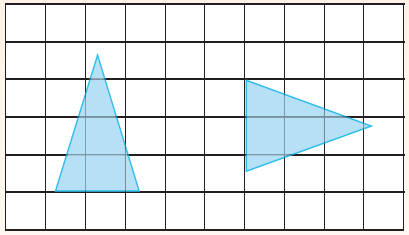
b.



c.

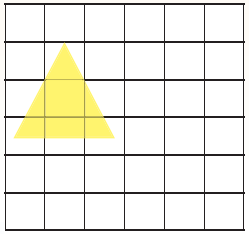


d.

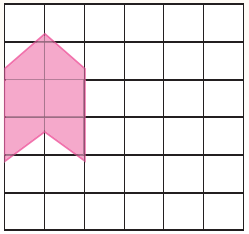


2. Draw a $\frac{1}{2}$ turn for each image.

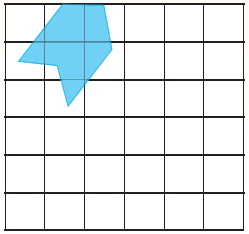
a.



b.

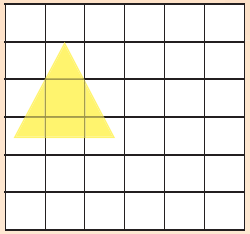


c.

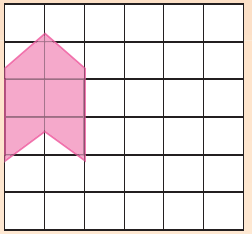


3. Draw a $\frac{1}{4}$ turn for each image.

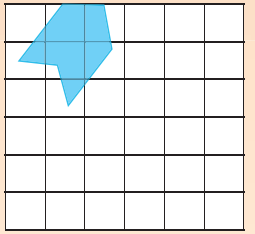
a.



b.

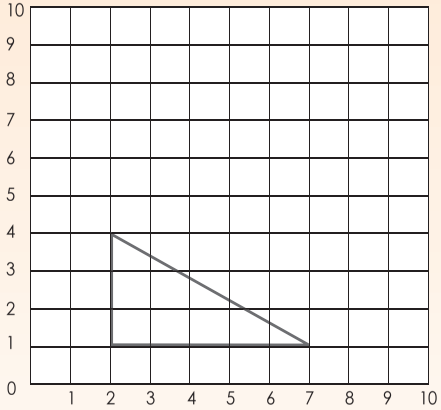


c.



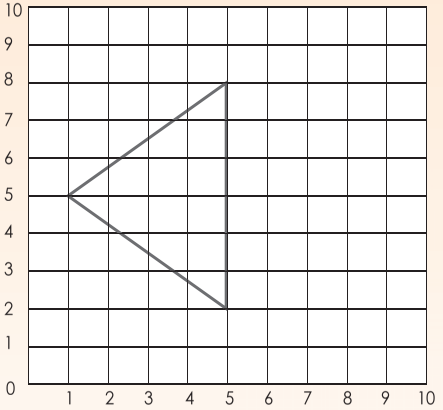
4a. Draw a $\frac{1}{2}$ turn image of the figure:
Triangle: (2,6); (2,1); (7,1)

4b. Write down the new coordinates.



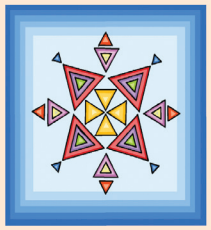
4c. Draw a $\frac{1}{4}$ turn of the figure:
Triangle: (5,8); (1,5); (5,2)

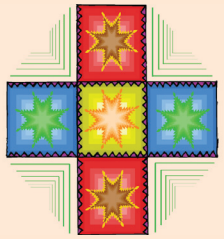
4d. Write down the new coordinates.



Geometric patterns

Describe each rotation.

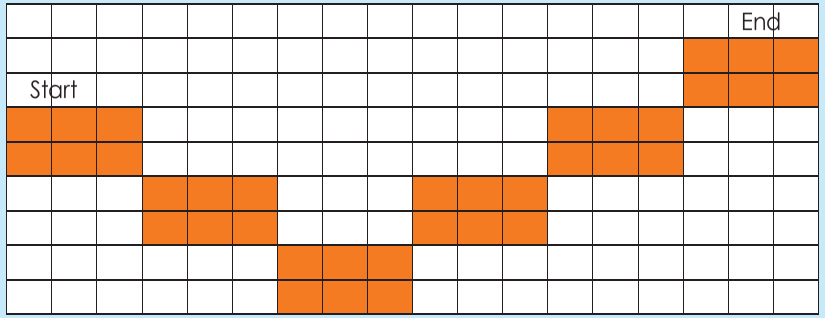




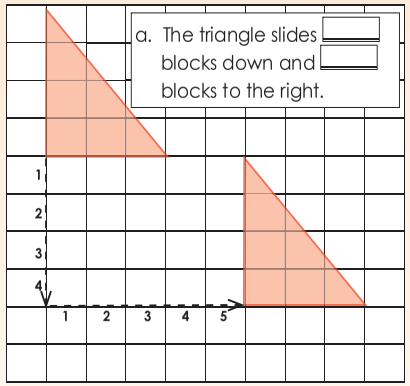
Term 4

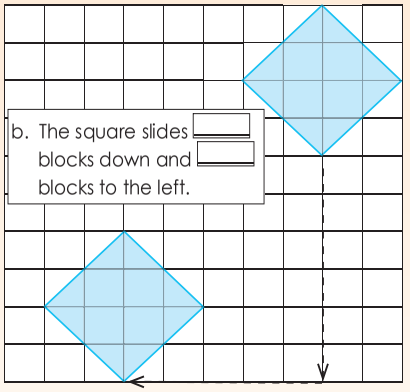
Translation: slide

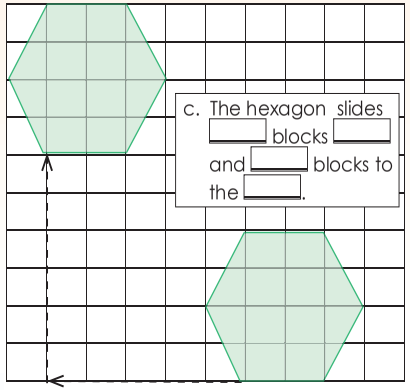
Describe what the rectangle does on this grid.

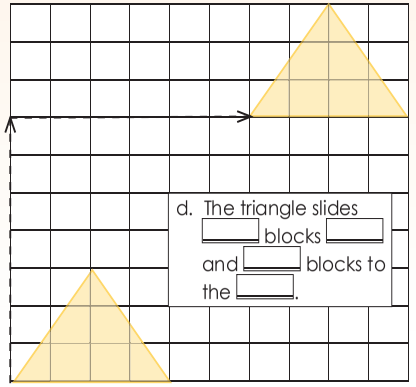


1. Complete the sentences.



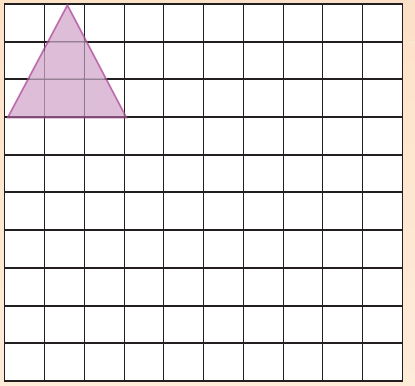




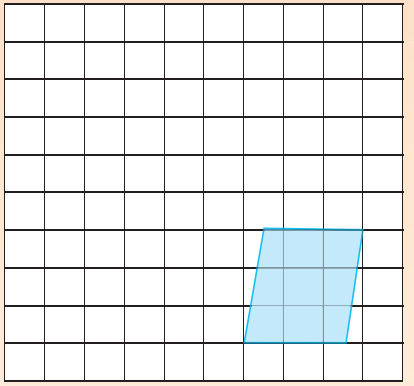


2. Draw the slide image of each figure.

a. 2 down, 4 right

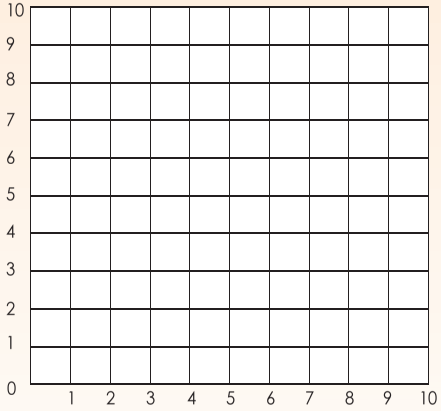


b. 5 left, 2 up

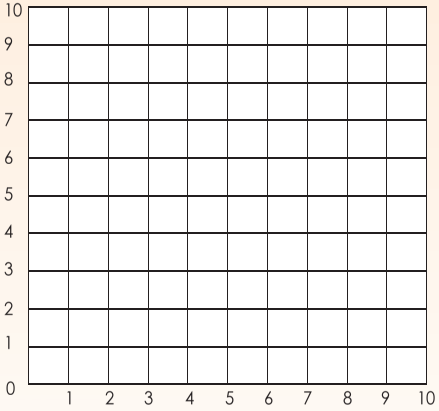


3. Plot the given points, then connect the points in order. Draw each slide, then give the coordinates of the slide image.

a. (2,4); (2,2); (4,2)
Slide 4 right, 4 up

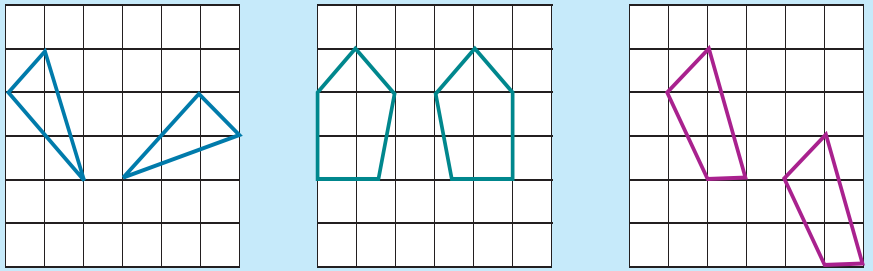


b. (9,9); (6,8); (6,5); (9,5)
Slide 3 down and 2 left



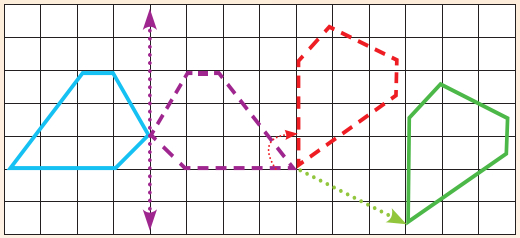
Flip, turn and slide

Say if the shape has been flipped, turned or slid.



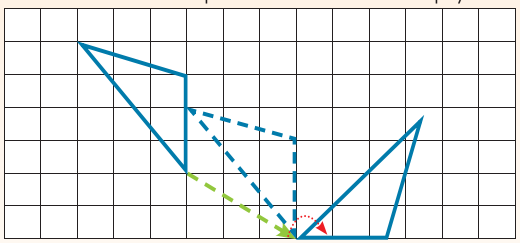
1. Here is a combination of motions. Describe it.

a. Use the dotted shapes, arrows and colours to help you.

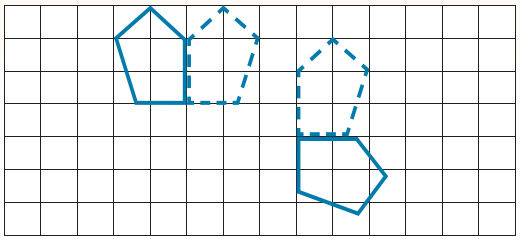


The first move is a _____,
then it is a _____,
and lastly it is a _____

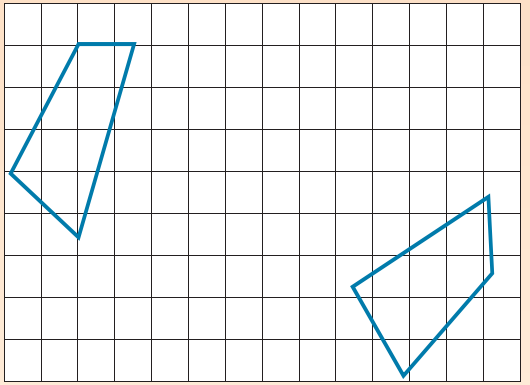
b. Use the dotted shapes and arrows to help you.



c. Use the dotted shapes to help you. Draw your own arrows to show the motion.

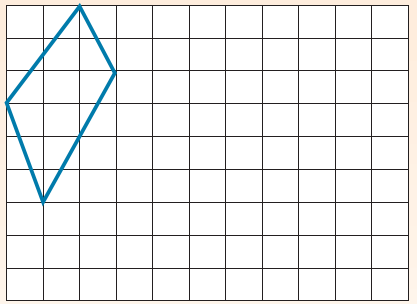


d. Draw your own dotted shapes and arrows to help you to describe the motion.

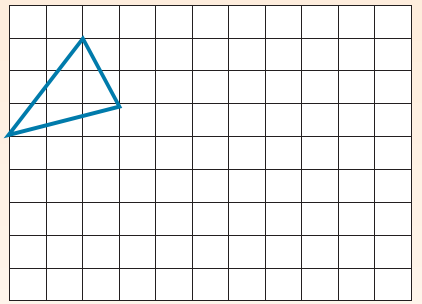


2. Flip, slide and turn the shapes.

a.

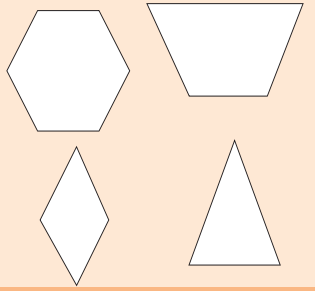


b.



I am an architect.

Trace these blocks on cardboard and cut them out.



Play in pairs.

Each player chooses a shape and traces around it.

Player 2 turns away, and then player 1 flips, slides or turns his or her shape and traces it again.

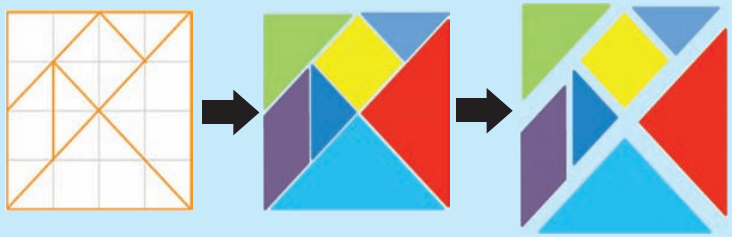
Player 2 now tries to identify the movement of the traced shape.

If she or he identifies the movement correctly he or she gets 1 point.

Repeat with player 1 turning away.

The first person to get 5 points is the winner.

Design your own tangram.



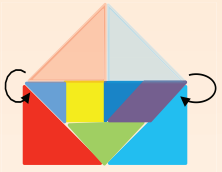
The three types of transformation we will use in this worksheet are: Translation, Reflection, and rotation

1. Before your answer the questions do it practically with your tangram pieces.

a. Describe the **transformations** used to create a rectangle from a square.

Step 1

Step 2



b. Describe the **transformations** used to create a parallelogram from a trapezium.

Step 1

Step 2

Step 3

c. Describe the **transformations** used to create a trapezium from a triangle

Step 1

Step 2

Step 3

d. Describe the **transformations** used to create a triangle from a square.

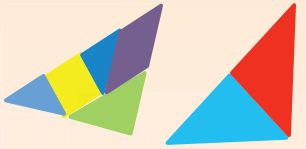
Step 1

Step 2

Step 3

e. Describe the **transformation** used to create a square using a triangle.

Step 1



Step 2

Step 3

f. Compare the trapezium in b. with the trapezium in c.

Pentominoes and other shapes

d. circle

e. pentagon

f. hexagon

g. octagon

h. trapezium

i. parallelogram

3. Describe the route above.

Start at the red square move 8 grid blocks east,

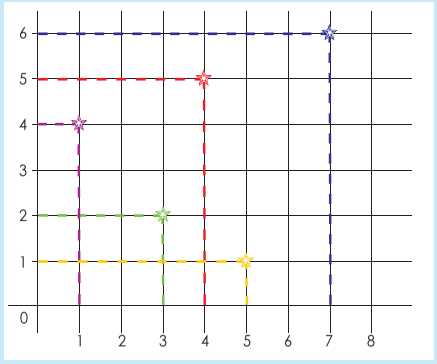
Play battleships ...

How to play using cut-out 7:

- First decide where to place your own fleet of ships within your grid. A fleet is made up of the ships shown to the right of the grid. Each ship is drawn vertically or horizontally (not diagonally). Your ships cannot occupy the same square (i.e. they cannot overlap).
- To place a ship, check how many boxes are covered by the ship (shown to the right of your grid) and then write the first letter of the name of the ship in the boxes it covers. For example, a Cruiser covers three boxes so you would pick any three adjacent boxes and put the letter C in each box. Keep your fleet location secret from your opponent! When each player has marked their fleet on their grid, begin play.
- Take turns to "shoot" at your opponents' fleet by calling out the number of a certain box by its grid location (e.g. "B4" or "D1"). Your opponent must say whether the shot is a "miss" or a "hit", and, if it is a "hit", what type of ship it is. If you hit your opponent's ship it is sunk. You can keep track of what you have shot on your lower grid, and the ships you have sunk by crossing off the ships at the bottom right of your card.
- Play continues until one player wins by successfully sinking the whole of the other player's fleet.

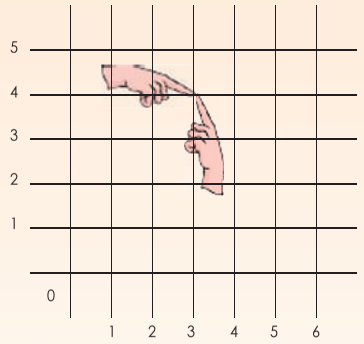
Dots and grids

Where is the star?

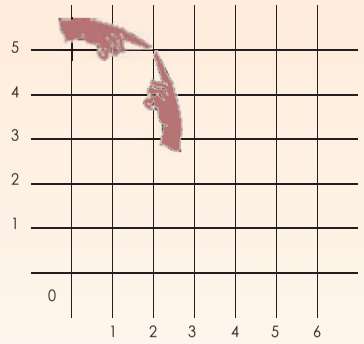


1. Make a dot on:

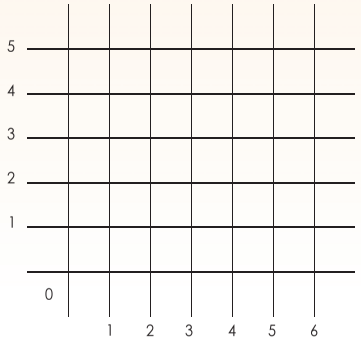
a. 3 and 4



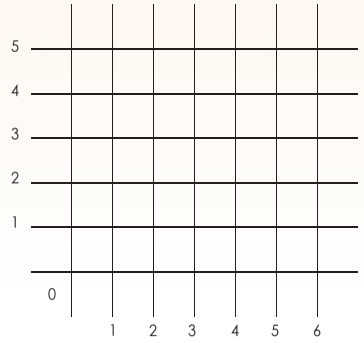
b. 2 and 5



c. 1 and 3

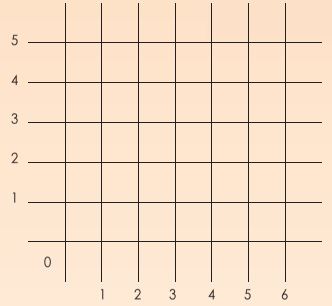


d. 4 and 2

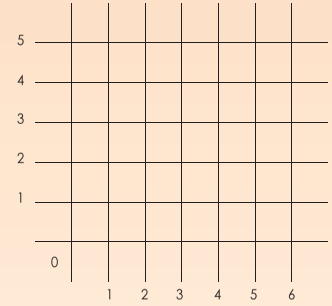


2. Make dots on:

a. 2 and 1, 4 and 3, 1 and 4



b. 1 and 2, 1 and 5, 5 and 2, 5 and 5



c. Combine the dots. What shape does it form?

_____

d. Combine the dots. What shape does it form?

_____

3. Write down the co-ordinates for the shapes below and join the dots to form the shape.

Be an artist

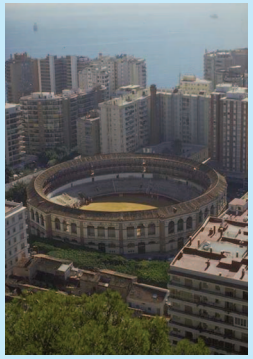
Draw your own grid.

Make dots on it.

Join the dots to form a picture.

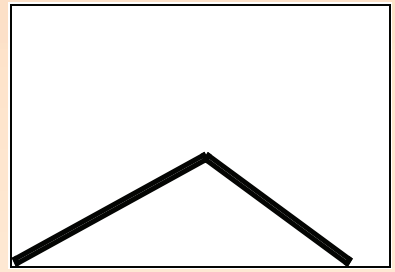
Write down the co-ordinates.

From where we are you looking at these buildings.



1. What do you notice when you look at these pictures?

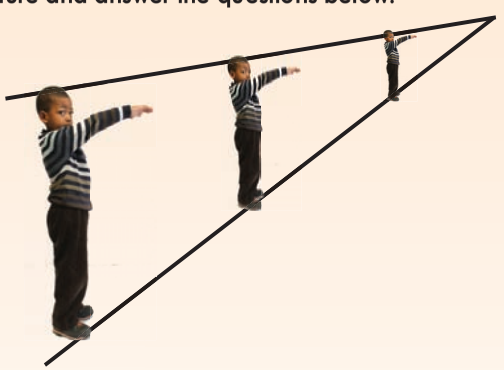
2. What do you notice when you look at the photograph and the drawing?



3. Find more photographs in magazines like the ones in question 2.

4. Put the pictures in the correct order, from furthest to closest.

5. Look at the picture and answer the questions below.



a. What happens to your view of the boy?

b. What do you think vanishing point means?

6. Use Cut-out 8. Cut out the dogs.
Draw perspective lines and put the dogs between the lines as they would look if they were getting further away.

Outcomes of two dice

Draw and make.

Draw these two nets on thick paper or card board, cut, fold and stick together with sticky tape.

6. a. If you use a dice like this and all the numbers are multiples of 100, what will the other numbers be?

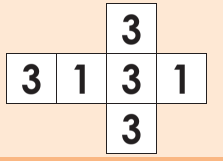
   _____

   b. What would the probability be to land on each number?

   _____

Dice fun

If you a dice like this what is the probability of rolling a 1 or a 3?



Term 4

Outcomes of two cards

You need to prepare.
You need to make a set of 10 cards using card board or paper. Each card should be 4 cm by 4 cm.

You need an empty bag.

1	2	3	4	5
6	7	8	9	10

Cut out the ten cards and place it in the bag or box.

1. Draw a card from the bag and record it below. Place the card back into the bag. Do this 100 times.
