MATHEMATICS P3

NOVEMBER 2008

MEMORANDUM

MARKS: 100

This memorandum consists of 11 pages.

<p>QUESTION 1</p> <p>1.1 $T_1 = 2; T_n = T_{n-1} + 4$</p> <p>1.2 $T_n = 2 + (n - 1)4 = 4n - 2$</p>	<p>✓ $T_1 = 2$ ✓ +4 ✓ recursion used (3)</p> <p>✓✓ formula in terms of n (2) [5]</p>
<p>QUESTION 2</p> <p>2.1 Approximately 2 %</p> <p>2.2 Approximately 16 %</p> <p>2.3 No, since there are some employees (less than 2%) earn below R3 000,00. These employees will not live an acceptable lifestyle economically.</p> <p style="text-align: center;">OR</p> <p>Yes, there is a fair distribution of salaries since the majority of the employees i.e. 68% earn a salary between R5 900 and R11 800 per month. Some employees will have more responsibilities or work longer hours and thus must be compensated accordingly. Less than 2% earn below R3 000,00.</p>	<p>✓✓ answer (2)</p> <p>✓✓ answer (2)</p> <p>✓✓✓ answer (3)</p> <p style="text-align: right;">[7]</p>

QUESTION 3	
3.1	<p>65% of 7 800 = 5 070</p>
3.2	<p>No. This is just the opinion of a small sample of the South African population. The view of the vast majority has not been heard. It is also not known whether the sample is representative of the population.</p> <p>The results of the survey are not valid for the following reasons: Only those who were watching this particular programme were able to respond. People who were not watching this programme were not even aware that such a survey had taken place. Respondents needed a cellphone to make response. The viewers who did not have a cellphone were unable to respond. Also, viewers who had cellphones but no airtime could not respond.</p>
	<p>✓ ✓ answer (2)</p> <p>✓ no</p> <p>✓ explanation - representative</p> <p>✓ explanation – not watching programme ; no cellphone</p> <p>(3) [5]</p>

QUESTION 4

4.1.1 11 students

✓answer (1)

4.1.2 Let N represent students reading the *National Geographic* magazine, G represent students reading the *Getaway* magazine and L represent students reading the *Leadership* magazine.

✓ 6
✓ 11
✓ $21 - x$
✓ $14 - x$
✓ other values (5)

4.1.3 $21 - x + x + 14 - x + 9 + 14 + 10 + 6 + 11 = 80$
 $85 - x = 80$
 $x = 5$

✓ ✓ setting up equation
 ✓ simplification (3)

4.1.4 $P(\text{student reads at least two magazines}) = \frac{5 + 14 + 10 + 9}{80} = 0,475$

✓ numerator
 ✓ divide by 80
 ✓ answer (3)

4.2.1

$P(\text{smoke detected by device A or device B})$
 $= P(\text{smoke detected by A}) + P(\text{smoke detected by B}) - P(\text{smoke detected by both})$
 $= 0,95 + 0,98 - 0,94$
 $= 0,99$

✓ formula
 ✓ substitution of probabilities
 ✓ answer (3)

4.2.2 $P(\text{smoke not detected}) = 1 - 0,99 = 0,01$

✓ answer (1)
[16]

QUESTION 5	
5.1.1 The number of different meal combinations = $3 \times 4 \times 2 = 24$.	✓ multiplication rule ✓ answer (2)
5.1.2 The number of different meal combinations that have chicken as main course = $3 \times 2 \times 2 = 12$	✓ multiplication rule ✓ answer (2)
5.2.1 Any learner seated in any position in: $6! = 6 \times 5 \times 4 \times 3 \times 2 \times 1 = 720$ different ways.	✓ multiplication rule ✓ answer (2)
5.2.2 These 2 particular learners could be seated in 2 different ways. Now consider them to be a single group. This group and the four remaining learners will yield 5 objects which results in $5! = 120$ different seating arrangements. Therefore these 2 particular learners could be seated together in $2 \times 120 = 240$ different ways.	✓ multiplication rule – 2 learners ✓ multiplication rule – 5 objects ✓ answer (3)
	[9]

NOTE: According to the National Curriculum Statement the solutions to data-handling problems should be done with the use of a calculator. The alternative to the calculator is to use the pen and paper method as indicated below.

QUESTION 6

6.1 & 6.3

✓✓ plotting points
✓ labels (3)

✓✓ line of least squares (5.3) (2)

6.2 By using a calculator : $a = 29,22$ (29.21542...)
 $b = 0,89$ (0,886530...)
 \therefore equation of line of least squares is $y = 29,22 + 0,89x$

✓✓ calculating the value of a
✓✓ calculating the value of b (4)

ALTERNATIVE

	x	y	$(x - \bar{x})$	$(y - \bar{y})$	$(x - \bar{x})(y - \bar{y})$	$(x - \bar{x})^2$	$(y - \bar{y})^2$
	16	45	-14,1	-10,9	153,69	198,81	118,81
	36	70	5,9	14,1	83,19	34,81	198,81
	20	44	-10,1	-11,9	120,19	102,01	141,61
	38	56	7,9	0,1	0,79	62,41	0,01
	40	60	9,9	4,1	40,59	98,01	16,81
	30	48	-0,1	-7,9	0,79	0,01	62,41
	35	75	4,9	19,1	93,59	24,01	364,81
	22	60	-8,1	4,1	-33,21	65,61	16,81
	40	63	9,9	7,1	70,29	98,01	50,41
	24	38	-6,1	-17,9	109,19	37,21	320,41
Sum	301	559	0	0	639,1	720,9	1290,9
Mean	30,1	55,9					

✓✓ calculating the value of b

✓✓ calculating the value of a (4)

Consider the equation of the least squares line to be $\hat{y} = a + bx$

$$b = \frac{\sum(x - \bar{x})(y - \bar{y})}{\sum(x - \bar{x})^2} = \frac{639,1}{720,9} = 0,89 \quad (0,88653)$$

<p>Using $\hat{y} = a + bx$ and \bar{x} and \bar{y} , $55,9 = a + (0,88653)(30,1)$ $a = 29,22$ $(29,21542516)$</p> <p>Therefore equation of line of least squares is $y = 29,22 + 0,89x$</p> <p>6.4 $y = 29,22 + (0,89)(22)$ $= 48,8$</p> <p>Therefore the employee who undergoes 22 hours of training should produce about 49 units.</p> <p>6.5 $s_y = \sqrt{\frac{\sum (y - \bar{y})^2}{n}} = \sqrt{\frac{1290,9}{10}} = 11,36$ $s_x = \sqrt{\frac{\sum (x - \bar{x})^2}{n}} = \sqrt{\frac{720,9}{10}} = 8,49$ <p>Using $b = r \frac{s_y}{s_x}$, we have $0,89 = r \frac{11,36}{8,49}$ $r = 0,66$</p> <p>6.6 There is a positive correlation between the hours of training and productivity levels. However, the value of r does not indicate a very strong relationship between hours of training and productivity levels. I would suggest that the manager look at the training programme and possibly revise it to meet the demands of the job.</p> </p>	<p>✓ substituting 22</p> <p>✓ answer (2)</p> <p>✓✓✓ calculating the value of r (3) (or if read from the calculator – full marks)</p> <p>✓ positive ✓ advise to manager (2)</p> <p>[16]</p>
---	---

QUESTION 7	
7.1.1 equal to twice the angle subtended by the same chord at the circumference.	✓ answer (1)
7.1.2 equal to the angle subtended chord in the alternate segment.	✓ answer (1)
7.1.3 supplementary.	✓ answer (1)
7.2.1 $\hat{D}_1 = \hat{B}_1 = 40^\circ$... (angle between tangent and chord ...) $\therefore \hat{D}_2 = \hat{B}_1 = 40^\circ$... (CD = CB)	✓ reason ✓ answer (2)
7.2.2 $\therefore \hat{C} = 180^\circ - (40^\circ + 40^\circ)$ $= 100^\circ$... (angle sum of triangle)	✓ answer (1)
7.2.3 $\hat{A} = 180^\circ - 100^\circ$ $= 80^\circ$ (Opposite angles of a cyclic quad are supp.)	✓ answer (1)
7.2.4 $\hat{O}_1 = 2\hat{A} = 160^\circ$... (angle at the centre is twice...)	✓ answer ✓ reason (2)
ALTERNATIVE	
From 7.2.1 $\hat{D}_2 = \hat{B}_1 = 40^\circ$	
Now $\hat{D}_3 = 90^\circ - (40^\circ + 40^\circ) = 10^\circ$... (tan \perp radius)	✓ $\hat{D}_3 = 10^\circ$
$\therefore \hat{O}_1 = 180^\circ - (10^\circ + 10^\circ) = 160^\circ$... (sum of angles in triangles)	✓ $\hat{O}_1 = 160^\circ$
	(2)
	[9]

QUESTION 8

8.1 Let $\hat{Q}_3 = \hat{B} = x$... (angles opp equal sides, $AQ = AB$)

$$\hat{Q}_3 = \hat{R}_1 = \hat{R}_2 = x \dots(\text{ext angle of cyclic quad...}) \text{ and}$$

(RA bisects \hat{R})

$$\hat{R}_2 = \hat{Q}_2 = x \dots (\text{angles in the same segment})$$

$$\text{Now } \hat{Q}_2 = \hat{Q}_3 = x$$

OR

$$\hat{Q}_2 + \hat{Q}_3 = \hat{R}_1 + \hat{R}_2 \quad (\text{ext angle of cyclic quad.})$$

$$\text{but } \hat{Q}_2 = \hat{R}_2 = \hat{R}_1 \quad (\text{angles in same segment, RA bisect...})$$

$$\therefore \hat{Q}_3 = \hat{Q}_2$$

OR

$$\hat{Q}_2 + \hat{Q}_2 = \hat{R}_1 + \hat{R}_2 \quad (\text{ext angle cyclic quad.})$$

$$\text{but } \hat{Q}_2 = \hat{R}_2 \quad (\text{angles in same segment})$$

$$\Rightarrow \hat{Q}_3 = \hat{R}_1$$

$$\text{but } \hat{R}_1 = \hat{R}_2 = \hat{Q}_1 \quad (\text{given})$$

$$\Rightarrow \hat{Q}_3 = \hat{Q}_2$$

\therefore AQ bisects \hat{PQB}

8.2 $\hat{R}_1 = \hat{B} = x$ (from 8.1)

$$\therefore TR = TB \dots\dots(\text{ sides opp equal angles})$$

8.3 $\hat{TRP} = 2x$ (from above)

$$\hat{A}_1 = \hat{Q}_3 + \hat{B} = 2x \dots\dots(\text{ exterior angle of triangle})$$

$$\text{And } \hat{P} = \hat{A}_1 = 2x \dots(\text{ angles in the same segment})$$

$$= \hat{TRP}$$

$$\checkmark \hat{Q}_3 = \hat{B} = x$$

$$\checkmark \hat{R}_1 = \hat{R}_2 = x$$

$$\checkmark \hat{R}_2 = \hat{Q}_2 = x \quad (3)$$

$$\checkmark \hat{R}_1 = \hat{B} = x$$

\checkmark isosceles triangle (2)

$$\checkmark \hat{R}_1 + \hat{R}_2 = 2x$$

$$\checkmark \hat{A}_1 = \hat{Q}_3 + \hat{B} = 2x$$

$$\checkmark \hat{P} = \hat{A}_1 = 2x$$

(3)
[8]

QUESTION 9	
<p>9.1 $\hat{R}_1 = 90^\circ$... (angle in a semi-circle)</p>	<p>✓ angle in a semi-circle (1)</p>
<p>9.2 $\hat{P}_2 = 90^\circ - x$... (angle between radius and tangent) $\hat{S} = 90^\circ - \hat{P}_2$... (ext. angle of Triangle)(sum of angles of triangle) $= 90^\circ - (90^\circ - x) = x$ $\therefore \hat{P}_1 = \hat{S} = x$</p>	<p>✓ $\hat{P}_2 = 90^\circ - x$ ✓ $\hat{S} = 90^\circ - \hat{P}_2$ ✓ $90^\circ - (90^\circ - x) = x$ (3)</p>
<p>9.3 $\hat{W}_2 = \hat{P}_1 = x$... (angles in the same segment) Also $\hat{S} = x$... (proved 9.2) $\hat{W}_2 = \hat{S}$ \therefore SRWT is a cyclic quad...(ext angle = int. opposite angle)</p>	<p>✓ $\hat{QWR} = \hat{P}_1 = x$ ✓ $\hat{QWR} = \hat{S}$ ✓ reason (3)</p>
<p>9.4 In ΔQWR ; ΔQST $\hat{W}_2 = \hat{S}$ (proved 9.3) \hat{Q}_1 is common $\hat{WRQ} = \hat{T}_2$(remaining angles) $\Delta QWR \parallel \Delta QST$ (AAA)</p>	<p>✓ $\hat{QWR} = \hat{QST}$ ✓ \hat{RQW} is common ✓ angles equal (3)</p>
<p>9.5.1 $\frac{TS}{RW} = \frac{QT}{QR}$ $\Delta QWR \parallel \Delta QST$ $\therefore \frac{TS}{2} = \frac{8}{4}$ $4TS = 16$ $\therefore TS = 4 \text{ cm}$</p>	<p>✓ $\frac{TS}{RW} = \frac{QT}{QR}$ ✓ $\frac{TS}{2} = \frac{8}{4}$ ✓ $TS = 4 \text{ cm}$ (3)</p>
<p>9.5.2 $\frac{SQ}{WQ} = \frac{TS}{RW}$ $SQ = \frac{4 \times 5}{2} = 10 \text{ cm}$ $\therefore SR = SQ - RQ$ $= 6 \text{ cm}$</p>	<p>✓ $\frac{SQ}{WQ} = \frac{TS}{RW}$ ✓ 10 cm ✓ 6 cm (3)</p>

[16]

QUESTION 10	
10.1 $\frac{CE}{ED} = \frac{CT}{TA} = \frac{1}{2}$	✓ answer (1)
10.2.1 From 10.1 $\frac{CE}{ED} = \frac{1}{2}$ But $DC = 9\text{ cm}$ $\therefore DE = 6\text{ cm}$ $\quad = BD.$ $\therefore D$ is the midpoint of $BE.$	✓ use of ratio ✓ $DE = 6\text{ cm}$ (2)
10.2.2 D is the midpoint of $BE.$ (from 10.2.1) Then F is the midpoint of $BT.$... (sides in proportion) $\therefore TE = 2FD$ (midpoint theorem) $\quad = 4\text{ cm}$	✓ proportion ✓ answer (2)
ALTERNATIVE $\frac{FD}{TE} = \frac{BD}{BE}$ $\frac{2}{TE} = \frac{6}{12}$ $6 \times TE = 24$ $TE = 4\text{ cm}$	✓ proportion ✓ answer (2)
10.3.1 $\frac{\Delta ADC}{\Delta ABD} = \frac{3}{2}$	✓ answer (1)
10.3.2 $\frac{\Delta TEC}{\Delta ABC} = \frac{\Delta TEC}{\Delta TBC} \times \frac{\Delta TBC}{\Delta ABC}$ $= \left(\frac{1}{5}\right)\left(\frac{1}{3}\right)$ $= \frac{1}{15}$	✓ ratios ✓ substitution ✓ answer (3) [9]

TOTAL: 100
