LO/LU 1	LO/LU 2	LO/LU 3
AS 12.1.1: Design, plan and conduct a scientific inquiry to collect data systematically with regard to accuracy, reliability and the need to control variables. <i>Ontwerp, beplan en voer 'n wetenskaplike ondersoek uit om data te versamel ten opsigte van akkuraatheid, betroubaarheid en die kontroleer van veranderlikes.</i>	AS 12.2.1: Define, discuss and explain prescribed scientific knowledge. <i>Definieer, bespreek en verduidelik voorgeskrewe wetenskaplike kennis.</i>	AS 12.3.1: Research, discuss, compare and evaluate scientific and indigenous knowledge systems and knowledge claims by indicating the correlation among them, and explain the acceptance of different claims. <i>Doen navorsing, bespreek, vergelyk en evalueer wetenskaplike en inheemse kennissysteme en kennisaansprake deur die ooreenkoms aan te dui en verduidelik die aanvaarding van verskillende aansprake.</i>
AS 12.1.2: Seek patterns and trends, represent them in different forms, explain the trends, use scientific reasoning to draw and evaluate conclusions, and formulate generalisations. <i>Soek patronen en tendense, stel dit in verskillende vorms voor, verduidelik tendense, gebruik wetenskaplike beredenering om gevolgtrekkings te maak en te evalueer, en formuleer veralgemenings.</i>	AS 12.2.2: Express and explain prescribed scientific principles, theories, models and laws by indicating the relationship between different facts and concepts in own words. <i>Verduidelik en druk voorgeskrewe wetenskaplike beginsels, teorieë, modelle en wette uit deur die verwantskap tussen verskillende feite en konsepte in eie woorde aan te dui.</i>	AS 12.3.2: Research case studies and present ethical and moral arguments from different perspectives to indicate the impact (pros and cons) of different scientific and technological applications. <i>Vors gevallestudies na en lewer etiese en morele argumente uit verskillende perspektiewe om die impak (voordele en nadele) van verskillende wetenskaplike en tegnologiese toepassings aan te dui.</i>
AS 12.1.3: Select and use appropriate problem-solving strategies to solve (unseen) problems. <i>Kies en gebruik gesikte probleemoplossingsstrategieë om (ongesiene) probleme op te los.</i>	AS 12.2.3: Apply scientific knowledge in everyday life contexts. <i>Pas wetenskaplike kennis in kontekste van die alledaagse lewe toe.</i>	AS 12.3.3: Evaluate the impact of scientific and technological research and indicate the contribution to the management, utilisation and development of resources to ensure sustainability continentally and globally. <i>Evalueer die impak van wetenskaplike en tegnologiese navorsing en dui die bydrae tot bestuur, benutting en ontwikkeling van bronre sou volhoubaarheid kontinentaal en globaal te verseker.</i>
AS 12.1.4: Communicate and defend scientific arguments with clarity and precision. <i>Kommunikeer en verdedig wetenskaplike argumente duidelik en presies.</i>		

GENERAL GUIDELINES/ALGEMENE RIGLYNE

1. CALCULATIONS/BEREKENINGE

- 1.1 Marks will be awarded for: correct formula, correct substitution, correct answer with unit.

Punte sal toegeken word vir: korrekte formule, korrekte substitusie, korrekte antwoord met eenheid.

- 1.2 No marks will be awarded if an incorrect or inappropriate formula is used, even though there may be relevant symbols and applicable substitutions.

Geen punte sal toegeken word waar 'n verkeerde of ontoepaslike formule gebruik word nie, selfs al is daar relevante simbole en relevante substitusies.

- 1.3 When an error is made during substitution into a correct formula, a mark will be awarded for the correct formula and for the correct substitutions, but no further marks will be given.

Wanneer 'n fout gedurende substitusie in 'n korrekte formule begaan word, sal 'n punt vir die korrekte formule en vir korrekte substitusies toegeken word, maar geen verdere punte sal toegeken word nie.

- 1.4 If no formula is given, but all substitutions are correct, a candidate will forfeit one mark.

Example:

No K_c expression, correct substitution

$$K_c = \frac{(2)^2}{(2)(1)^3} \checkmark = 2 \checkmark \left(\frac{2}{3}\right)$$

Indien geen formule gegee is nie, maar al die substitusies is korrek, verloor die kandidaat een punt.

Voorbeeld:

Geen K_c -uitdrukking, korrekte substitusie:

$$K_c = \frac{(2)^2}{(2)(1)^3} \checkmark = 2 \checkmark \left(\frac{2}{3}\right)$$

- 1.5 Marks are only awarded for a formula if a calculation has been attempted. i.e. substitutions have been made or a numerical answer given.

Punte word slegs vir 'n formule toegeken indien 'n poging tot 'n berekening aangewend is, d.w.s. substitusies is gedoen of 'n numeriese antwoord is gegee.

- 1.6 Marks can only be allocated for substitutions when values are substituted into formulae and not when listed before a calculation starts.

Punte kan slegs toegeken word vir substitusies wanneer waardes in formules ingestel is en nie vir waardes wat voor 'n berekening genoem is nie.

- 1.7 All calculations, when not specified in the question, must be done to two decimal places.

Alle berekeninge, wanneer nie in die vraag gespesifieer word nie, moet tot twee desimale plekke gedoen word.

- 1.8 If a final answer to a calculation is correct, full marks will not automatically be awarded. Markers will always ensure that the correct/appropriate formula is used and that workings, including substitutions, are correct.

Indien 'n finale antwoord tot 'n berekening korrek is, sal volpunte nie automaties toegeken word nie. Nasieners sal altyd verseker dat die korrekte/toepaslike formule gebruik word en dat bewerkings, insluitende substitusies korrek is.

2. UNITS/EENHEDE

- 2.1 Candidates will only be penalised once for the repeated use of an incorrect unit **within a question**.

Kandidate sal slegs een keer gepenaliseer word vir die herhaalde gebruik van 'n verkeerde eenheid in 'n vraag.

- 2.2 Units are only required in the final answer to a calculation.

Eenhede word slegs in die finale antwoord tot 'n vraag verlang.

- 2.3 Marks are only awarded for an answer and not for a unit *per se*. Candidates will therefore forfeit the mark allocated for the answer in each of the following situations:

- Correct answer + wrong unit
- Wrong answer + correct unit
- Correct answer + no unit

Punte word slegs vir 'n antwoord en nie vir 'n eenheid per se toegeken nie. Kandidate sal derhalwe die punt vir die antwoord in die volgende gevalle verbeur:

- Korrekte antwoord + verkeerde eenheid
- Verkeerde antwoord + korrekte eenheid
- Korrekte antwoord + geen eenheid

- 2.4 Separate compound units with a multiplication dot, not a full stop, for example, mol·dm⁻³. Accept mol.dm⁻³ (or mol/dm³) for marking purposes.

Skei saamgestelde eenhede met 'n vermenigvuldigingsteken en nie 'n punt nie, byvoorbeeld, mol·dm⁻³. Aanvaar mol.dm⁻³ (of mol/dm³).

3. GENERAL/ALGEMEEN

- 3.1 If one answer or calculation is required, but two given by the candidate, only the first one will be marked, irrespective of which one is correct. If two answers are required, only the first two will be marked, etc.

Indien een antwoord of berekening verlang word, maar twee word deur die kandidaat gegee, sal slegs die eerste een nagesien word, ongeag watter een korrek is. Indien twee antwoorde verlang word, sal slegs die eerste twee nagesien word, ens.

- 3.2 When a chemical **FORMULA** is asked, and the **NAME** is given as answer the candidate forfeits the marks. The same rule applies when the **NAME** is asked and the **FORMULA** is given.

Wanneer 'n chemiese formule gevra word, en die NAAM word as antwoord gegee, sal die kandidaat punte verbeur. Dieselfde reël geld wanneer die NAAM gevra word en die FORMULE gegee word.

- 3.3 When redox half-reactions are to be written, the correct arrow should be used.
If the equation

is the correct answer, the marks must be given as follows:

Wanneer redokshalfreaksies geskryf moet word, moet die korrekte pyltjie gebruik word. Indien die vergelyking

die korrekte antwoord is, moet die punte soos volg toegeken word:

- 3.3 When candidates are required to give an explanation involving the relative strength of oxidising and reducing agents, do not accept the following:
- Stating the position of a substance on table 4 only (e.g. Cu is above Mg).
 - Using relative reactivity only (e.g. Mg is more reactive than Cu).
 - The correct answer would be for instance: Mg is a stronger reducing agent than Cu, and therefore Mg will be able to reduce Cu^{2+} ions to Cu. The answer can also be given in terms of the relative strength as electron acceptors and donors.

Wanneer kandidate 'n verduideliking moet gee oor die relatiewe sterkte van oksideer- en reduseermiddels, is die volgende onaanvaarbaar:

- Meld slegs die posisie van 'n stof op tabel 4 (bv. Cu is bo Mg).
- Gebruik slegs relatiewe reaktiwiteit (bv. Mg is meer reaktief as Cu).
- Die korrekte antwoord sal byvoorbeeld wees: Mg is 'n sterker reduseermiddel as Cu en derhalwe sal Mg in staat wees om Cu^{2+} -ione na Cu te reduseer. Die antwoord kan ook in terme van die relatiewe sterkte van elektronskenkers of -ontvangers gegee word.

- 3.4 One mark is forfeited when the charge of an ion is omitted per equation.(not for the charge on an electron)

Een punt sal verbeur word wanneer die lading van 'n ioon per vraag weggelaat is.

- 3.5 The error-carrying principle does not apply to chemical equations or half-reactions. For example, if a learner writes the wrong oxidation/reduction half-reaction in the sub-question and carries the answer to another sub-question (balancing of equations or calculation of E_{cell}^{θ}) then the learner must not be credited for this substitution.

Die foutdraende beginsel geld nie vir chemiese vergelykings of halfreaksies nie. Byvoorbeeld, indien 'n leerder die verkeerde oksidasie/reduksie-halfreaksie vir die subvraag skryf en die antwoord na 'n ander subvraag oordra (balansering van vergelyking of E_{sel}^{θ}) dan word die leerder nie vir die substitusie gekrediteer nie.

- 3.6 In the structural formula of an organic molecule all hydrogen atoms must be shown. Marks must be deducted if hydrogen atoms are omitted.

In die struktuurformules van 'n organiese molekule moet alle waterstofatome getoon word. Punte sal afgetrek word vir die weglatting van waterstofatome.

- 3.7 When a structural formula is asked, marks must be deducted if the learner writes the condensed formula.

Wanneer 'n struktuurformule gevra word, sal punte afgetrek word indien die leerder die gekondenseerde formule skryf.

- 3.8 When an IUPAC name is asked and the candidate omits the hyphen (e.g. instead of pent-1-ene or 1-pentene the candidate writes pent 1 ene or 1 pentene), marks must be forfeited.

Wanneer die IUPAC-naam gevra word en die koppelteken(s) in die naam word uitgelaat (bv. in plaas van pent-1-een of 1-penteen skryf 'n kandidaat pent 1 een of 1 penteen), sal punte verbeur word.

- 3.9 When a chemical reaction is asked, marks are awarded for correct reactants, correct products and correct balancing.

If only a reactant(s) followed by an arrow, or only a product(s) preceded by an arrow, is/are written, marks may be awarded for the reactant(s) or product(s).

If only a reactant(s) or only a product(s) are written, without an arrow, no marks are awarded for the reactant(s) or product(s).

Examples: $\text{N}_2 + 3\text{H}_2 \rightarrow 2\text{NH}_3$ ✓ bal. ✓

$\text{N}_2 + \text{H}_2 \rightarrow$ ✓ $\frac{1}{3}$

$\rightarrow \text{NH}_3$ ✓ $\frac{1}{3}$

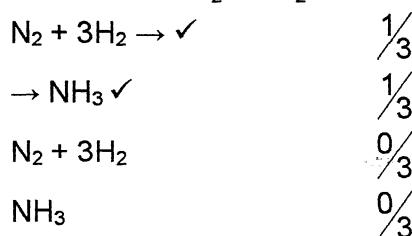

$\text{N}_2 + \text{H}_2$ $\frac{0}{3}$

NH_3 $\frac{0}{3}$

Wanneer 'n chemiese reaksie gevra word, word punte toegeken vir korrekte reaktanse, korrekte produkte en korrekte balansering.

Indien slegs 'n reaktans(e) gevvolg deur 'n pyl, of slegs 'n produk(te) voorafgegaan deur 'n pyl, geskryf word, word punte vir die reaktans(e) of produkte gegee. Indien slegs reaktanse of slegs produk(te) geskryf word sonder 'n pyl, word geen punte gegee nie.

Voorbeeld: $N_2 + 3H_2 \rightarrow NH_3$ ✓ bal. ✓

4. POSITIVE MARKING/POSITIEWE NASIEN

Positive marking regarding calculations will be followed in the following cases:
Positiwe nasien met betrekking tot berekenings sal in die volgende gevalle geld:

- 4.1 **Sub-question to sub-question:** When a certain variable is calculated in one sub-question (e.g. 3.1) and needs to be substituted in another (3.2 or 3.3), e.g. if the answer for 3.1 is incorrect and is substituted correctly in 3.2 or 3.3, **full marks** are to be awarded for the subsequent sub-questions.

Subvraag na subvraag: *Wanneer 'n sekere veranderlike in een subvraag (bv. 3.1) bereken word en dan in 'n ander vervang moet word (3.2 of 3.3), bv. indien die antwoord vir 3.1 verkeerd is en korrek in 3.2 of 3.3 vervang word, word volpunte aan die daaropvolgende subvraag toegeken.*

- 4.2 **A multi-step question in a sub-question:** If the candidate has to calculate, for example, current in the first step and gets it wrong due to a substitution error, the mark for the substitution and the final answer will be forfeited.

'n Vraag met veelvuldige stappe in 'n subvraag: *Indien 'n kandidaat byvoorbeeld die stroom verkeerd bereken in 'n eerste stap as gevvolg van 'n substitusiefout, verloor die kandidaat die punt vir sowel die substitusie as die finale antwoord.*

5. NEGATIVE MARKING/NEGATIEWE NASIEN

Normally an incorrect answer cannot be correctly motivated if based on a conceptual mistake. If the candidate is therefore required to motivate in question 3.2 the answer given to question 3.1, and 3.1 is incorrect, no marks can be awarded for question 3.2. However, if the answer for e.g. 3.1. is based on a calculation, the motivation for the incorrect answer in 3.2 could be considered.

'n Verkeerde antwoord, indien dit op 'n konseptuele fout gebaseer is, kan normaalweg nie korrek gemotiveer word nie. Indien 'n kandidaat gevra word om in vraag 3.2 die antwoord op vraag 3.1 te motiveer en 3.1 is verkeerd, kan geen punte vir vraag 3.2 toegeken word nie. Indien die antwoord op bv. 3.1 egter op 'n berekening gebaseer is, kan die motivering vir die verkeerde antwoord in 3.2 oorweeg word.

CuO / copper(II) oxide / copper oxide / cupric oxide ✓

CuO / koper(II)oksied / koperoksied ✓

(2)

- 6.6 In terms of lump: / In terme van soliede stuk:

Smaller (exposed) surface area / contact area ✓

Less hydrogen peroxide molecules per unit time comes in contact with the catalyst. / Less effective collisions per unit time. / Frequency of effective collisions decreases. ✓

Kleiner (blootgestelde) reaksieoppervlakte / kontakarea. ✓

Minder waterstofperoksied per eenheidstyd kom in kontak met katalisator. / Minder effektiewe botsings per eenheid tyd. / Frekwensie van effektiewe botsings neem af. ✓

(2)

OR/OF

In terms of powder: / In terme van poeier:

Larger (exposed) surface area / contact area ✓

More hydrogen peroxide molecules per unit time comes in contact with the catalyst. / More effective collisions per unit time. / Frequency of effective collisions increases. ✓

Groter (blootgestelde) reaksieoppervlakte / kontakarea. ✓

Meer waterstofperoksied per eenheidstyd kom in kontak met katalisator. / Meer effektiewe botsing per eenheid tyd. / Frekwensie van effektiewe botsings neem toe. ✓

- 6.7 Decomposition of hydrogen peroxide releases oxygen that ✓
counters / resists the functioning of the bacteria. / decreases bacterial activity.
/ kills / destroys / oxidises the bacteria. ✓

Ontbinding van waterstofperoksied stel suurstof vry wat ✓

*die werking van bakterieë teenwerk. / bakteriese aktiwiteit verminder. /
bakterieë doodmaak / vernietig / oksideer.* ✓

QUESTION 7/VRAAG 7

7.1

- 7.1.1 When the equilibrium in a closed system is disturbed ✓
the system will shift the equilibrium position OR re-instate a new equilibrium
as to OR favour the reaction that will ✓
oppose OR cancel OR counteract the change OR disturbance. ✓

Wanneer die ewewig in 'n geslote sisteem versteur word, ✓
skuif die sisteem die ewewigsposisie sodanig deur OF word 'n nuwe ewewig
ingestel deur OF die reaksie bevoordeel wat ✓
die effek van die versteuring OF verandering teen te werk OF te kanselleer. ✓

OR / OF

When a stress / change is placed on a system in equilibrium ✓
The system shifts the equilibrium (position) OR re-instate a new equilibrium ✓
so as to remove OR cancel OR oppose the stress / change. ✓

Wanneer 'n sisteem in ewewig onderhewig is aan 'n spanning OF
verandering, ✓
skuif die sisteem die ewewig(posisie) sodanig OF word 'n nuwe ewewig
ingestel ✓ deur
die spanning / verandering te verwyder OF teen te werk OF te kanselleer. ✓

OR / OF

When the conditions affecting an equilibrium are changed, ✓
the equilibrium (position) shifts in such a way ✓
as to oppose the change OR cancel the change. ✓

Wanneer die toestande wat 'n ewewig beïnvloed, verander word, ✓
sal die ewewig(posisie) sodanig verskuif ✓
dat die verandering teengewerk word OF gekanselleer word. ✓

7.1.2 Decreases ✓

When the pressure is increased, the reaction that produced the smaller
volume or amount of gas is favoured. / 4 mol or volumes of gas produces
2 mol or volumes of gas. ✓
Thus the reverse reaction is favoured. ✓

Verminder ✓

Wanneer die druk verhoog word, word die reaksie wat 'n kleiner volume of
aantal mol vorm, bevoordeel. / 4 mol of volumes gas reageer om 2 mol of
volumes gas te vorm. ✓
Dus word die terugwaartse reaksie bevoordeel. ✓

- Using ratio / Gebruik verhouding $n(H_2) = n(H_2O) = n(CO) = n(CO_2)$ ✓
- Equilibrium / Ewewig: $n(H_2) = x - 0,2$ (mol); $n(CO_2) = 0,1$ mol
[Initial amount – change / Aanvangshoeveelheid - verandering] ✓
- Equilibrium / Ewewig: $n(CO) = 0,2$ (mol)
[Initial amount + change / Aanvangshoeveelheid + verandering] ✓
- Divide by volume / Gedeel deur volume (10 dm^3) ✓
- Correct K_c expression (formulae in square brackets) / Korrekte K_c -uitdrukking (formules in vierkanthakies) ✓
- Substitution of K_c value / Vervanging van K_c -waarde ✓
- Substitution of concentrations / Vervanging van konsentrasies ✓
- Final answer / Finale antwoord: $0,3$ mol ✓

Option 1 / Opsie 1:

$n(H_2O)$ at equilibrium / by ewewig = $0,2$ mol (given)

$$\begin{aligned} n(H_2O) \text{ formed / gevorm} &= n(CO) \text{ formed / gevorm} = 0,2 \text{ (mol)} \\ n(H_2) \text{ reacted} = (0,2 \text{ mol}) & n(CO_2) \text{ reacted} = (0,2 \text{ mol}) \end{aligned} \quad \left. \right\} \text{Ratio / verhouding} \quad \checkmark$$

At equilibrium / By ewewig:

$$\begin{aligned} n(H_2) &= (x - 0,2) / (\text{change / verandering}) \\ n(CO_2) &= 0,1 \text{ (mol)} / (0,3 - \text{change / verandering}) \\ n(H_2O) &= n(CO) = 0,2 \text{ (mol)} \end{aligned} \quad \left. \right\} \checkmark$$

Equilibrium concentration / Ewewigskonsentrasies:

$$\begin{aligned} c(H_2) &= \frac{n}{V} = \frac{x - 0,2}{10} \\ c(CO_2) &= \frac{n}{V} = \frac{0,1}{10} \\ c(H_2O) &= \frac{n}{V} = \frac{0,2}{10} \\ c(CO) &= \frac{n}{V} = \frac{0,2}{10} \end{aligned} \quad \left. \right\} \text{Divide by 10 / Gedeel deur 10} \quad \checkmark$$

7.2.2 Exothermic ✓

☛ A decrease in K_c implies:

Lower product concentration / less products OR higher reactant concentration / more reactants. ✓

Reverse reaction favoured. ✓

This means the forward reaction is exothermic.

☛ Eksotermies ✓

☛ 'n Afname in K_c beteken:

'n laer produkkonsentrasie / minder produkte OF hoër reaktanskonsentrasie / meer reaktanse. ✓

Terugwaartse reaksie bevordeel. ✓

Dus is die voorwaartse reaksie eksotermies.

OR / OF

☛ Exothermic

☛ Decrease in K_c – reverse reaction is favoured ✓

Increase in temperature favours the endothermic reaction ✓

∴ Forward reaction is exothermic.

☛ Eksotermies

☛ Afname in K_c – terugwaartse reaksie word bevordeel ✓

Toename in temperatuur bevordeel die endotermiese reaksie ✓

∴ Voorwaartse reaksie is eksotermies.
