## **NORMS AND STANDARDS REPORT**

**2015/2016**

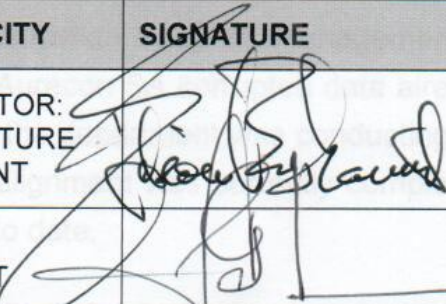

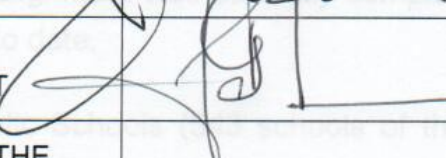

Prepared by: Northern Cape Department of Education: Infrastructure Development 2013

**Northern Cape**  
**Department of Education**  
**Infrastructure**

## SIGN-OFF – NORMS AND STANDARDS

### OFFICIAL SIGN-OFF OF THE NORMS AND STANDARDS REPORT FOR 2015/16

NAME	RANK/CAPACITY	SIGNATURE	DATE SIGNED
MR. G.B. OLIPHANT	CHIEF DIRECTOR: INFRASTRUCTURE DEVELOPMENT		DATE: 08/05/2015
MR. G.T. PHARASI	HEAD OF DEPARTMENT		DATE: 10/06/2015
MRS. G.B. CJIEKELLA- LECHOLO	MEMBER OF THE EXECUTIVE COUNCIL FOR NORTHERN CAPE DEPARTMENT EDUCATION		DATE: 10/06/2015

## LIMITATIONS AND CONSTRAINTS

---

This document contains information on 80% of the schools in the Northern Cape, the addition 20% was not yet verified on date of submission due to the following reasons:

- The alignment of NEIMS3 to the Education Facilities Management System (EFMS) in June 2014 carried out by DBE and Aurecon SA corrupted data already inputted into the EFMS from the Verification exercise the department was conducting. This data had to be re-captured in July 2014, once the alignment was correctly completed, therefore not all data for schools has been captured to date.
- The majority of Northern Cape Public Schools (543 schools of the total 574 schools) have been visited for the Verification Process, however only 460 have been captured on the above mentioned Infrastructure database, therefore information for some of the schools in the province is not captured in this report.
- Due to the riots/strikes in the John Taolo Gaetsewe District Municipality a total of 32 schools were not accessible in which the verification exercise was not completed. These schools have been visited in 2015 however this data is still in the process of being captured on the system, to be reflected on the updated 2015 edition of the Norms and Standards Report which will be finalized end June 2015.

The Norms and Standards Report will be updated annually to cater for anticipated National Government Infrastructure Priority Programmes.

# NORMS AND STANDARDS REPORT

---

## **1. 3 Year Implementation Programme:**

To be implemented by 31 March 2016.

### **1.1. Inappropriate structures**

Asbestos is a naturally occurring mineral that once was lauded for its versatility and was mined in the Northern Cape. It was recognized for its heat resistance, tensile strength and insulating properties, and used for everything from fire-proof vests to home and commercial construction. It was woven into fabric, and mixed with cement. Asbestos was a perfect blend to make things better – except it was deemed to be highly toxic. Today asbestos is a known cause of mesothelioma cancer and asbestosis, is banned in more than 50 countries. Structures built with asbestos, need only normal wear and tear with age to dislodge the fibres and send them airborne, leaving most everyone vulnerable. South Africa reportedly has the highest incidence of mesothelioma in the world, with data suggesting that 400 to 500 patients are diagnosed with mesothelioma a year without any cure to date to combat illnesses related to this mineral.

The health implications of exposure to airborne asbestos fibres were highlighted in the 1930s and specific links to certain cancers were first made in South Africa in the early 1960s. "Due to the extent and severity of asbestos related problems affecting the communities in these provinces, a multi-stakeholder National Asbestos Summit was convened by the Environmental Portfolio Committee in 1998. The Regulations that was published in 2002 as part of The Occupational Health and Safety Act (ACT NO. 85 OF 1993), deals with the use and dispensing of Asbestos in South Africa.

The Northern Cape has a significant number of schools which were fully or partially constructed out of asbestos. These schools were constructed as a temporary solution by mining houses that set up operations in the province. Although well maintained by the communities, the structures are considered to be a health hazard to the end user. Communities further see these structures as reminders of a past that should not be repeated. The department therefore finds itself in a situation where a significant amount of pressure is expected from its current infrastructure budget to address these inappropriate structures.

This map illustrates the geographical distribution of asbestos mining and its impact on settlements in the Free State province of South Africa. The map features several key elements:

- Asbestos Mining Regions:** Indicated by red shaded areas, showing high concentrations of asbestos in the central and northern parts of the province.
- Affected Settlements:** Marked by yellow dots, primarily located within the red-shaded mining regions.
- Provincial Boundaries:** Shown as a thick black line.
- Municipal Boundaries:** Shown as thin black lines.
- Towns/Villages:** Represented by small black dots.
- Legend:**
  - Yellow dot: Affected Settlement
  - Red dot: Asbestos mine
  - Red shaded area: Asbestos high
  - Blue shaded area: Asbestos medium
  - Thick black line: Provincial Bound
  - Thin black line: Municipal Bound
  - Small black dot: Towns/Villages
- Geographical Labels:** Includes names like 'Joe Morolong', 'Therikobane', 'Kareberg', and 'Korhardsburg'.
- Compass Rose:** Located in the bottom right corner, indicating North (N), South (S), East (E), and West (W).

An application has been submitted to the DBE to request that the 29 full schools identified as being made of asbestos material to be replaced as part of the programme. Given the capacity challenges in the province, the department views the task as best being addressed through a collective effort by the National department as well as provincial stakeholders.

The following table identifies the 29 schools that need to be fully replaced per District Municipality.

*Table 1: Inappropriate Structures - Full Schools*

EMIS NO.	SCHOOL NAME	EXISTING STRUCTURE	REPLACEMENT	ESTIMATE

300043216	LAERSKOOL WILGENHOUTSDRIF	ASBESTOS	SMALL SCHOOL	R10 000 000
TOTAL FOR INAPPROPRIATE STRUCTURES				R526 000 000

There are currently 10 schools identified in the province that also have various assets that are deemed inappropriate these assets are singular assets, such as admin blocks, ablution facilities and classroom buildings that will be addressed under the inappropriate structures programme by the department. As other schools are verified and determined to comprise of inappropriate material, they will be added to the list below.

*Table 2: Partial Inappropriate Structures*

EMIS NO.	SCHOOL NAME	EXISTING STRUCTURE	ESTIMATE
PIXLEY KA SEME DISTRICT MUNICIPALITY			
300013204	GRANGE PRIMÊRE SKOOL	CLASSROOMS, ECD	R3 500 000
300024302	CARNARVON SECONDARY SKOOL	CLASSROOMS	R3 000 000

300021207	LAERSKOOL DE AAR	STORAGE	R 500 000
TOTAL FOR INAPPROPRIATE BUILDINGS			R26 500 000

Temporary measures for damaged asbestos structures such as the painting of the panels will be implemented as part of emergency maintenance to retain any particulates that may be damaging to learners and educators. By the end of the 2015/2016 financial year a full programme for eradication of all inappropriate structures will be available and implemented.

### **2.1.1. Power Supply**

The Department initiates the upgrade of electricity supply programme, where facilities do not meet the minimum suitability for Power Supply, the projects are listed below. These schools either do not have any form of Power Supply or there exist exposed wires and other dangerous installations that affect the functionality of the school. These are dealt with through the in-house Maintenance Programme. Theft of circuit breakers has been identified as a major reason for dysfunctional electricity systems in schools.

*Table 3: Schools with no power supply*

PIXLEY KA SEME DISTRICT MUNICIPALITY			
300024204	DOMBIETERSFONTEIN PRIMÈRE SKOOL	NO POWER SUPPLY	R 500 000
TOTAL			R1 500 000

### **2.1.2. Water Supply**

The Department initiates the Upgrade of Water Supply Programme, where facilities do not meet the minimum suitability for Water Supply, these projects are listed below. These schools do not have any form of water supply, have erratic and unreliable water supply, have borehole installations that require rehabilitation or have poor quality water; whereby the Department installs water purification plants at the respective schools.

This programme forms the backbone for the Department's upgrade of sanitation programme, whereby various schools have been identified where conversions of VIP / Enviro loo toilets to waterborne flushing systems are feasible.

*Table 4: Schools with no water supply*

ZF MGCAWU DISTRICT MUNICIPALITY			
300044221	AGANG-THUTO PRIMARY SCHOOL	NO WATER SUPPLY	R 500 000
TOTAL			R 500 000

### **2.1.3. Ablution and Sanitation**

The Ablution and Sanitation programme is applied where facilities do not meet the minimum suitability for Sanitation, the projects are listed below. Plain pit and bucket latrines are not allowed at schools according to the Regulations Relating to Minimum Uniform Norms and Standards for Public School Infrastructure.

The Department intends to provide sanitation facilities in line with the required norms and standards, making provision for the appropriate number of toilet seats per learners.

*Table 5: Schools with no Sanitation*

EMIS NO.	SCHOOL NAME	EXISTING STRUCTURE	ESTIMATE
JOHN TAOLO GAETSEWE DISTRICT MUNICIPALITY			
300100316	DITSHIPENG INTERMEDIATE SCHOOL	PIT LATRINES	R 1000 000

300043207	FRANK BIGGS PRIMÈRE SKOOL	ERADICATION OF BUCKETS	R 1200 000
TOTAL			R5 850 000

## 2. 7 Year Implementation Programme:

To be implemented by 31 March 2020.

The Regulations Relating to Minimum Uniform Norms and Standards for Public School Infrastructure specifies the norms for class sizes and the maximum count of learners allowed in a classroom, specifies the types of power and water supply, as well as the types and required Sanitary facilities allowed in public schools. It also specifies the standards for perimeter security and Electronic connectivity as required by the 7 year Implementation Programme. The List for specific schools is included in the Annexure A: Infrastructure Database

### 2.1.4. Classrooms

The minimum space in a school allocated for each learner and educator per classroom are prescribed in the Regulations.

*Table 6: Minimum areas required per learner and per educator*

Learners	Minimum area per Learner	Minimum area per Educator	Minimum learners per Classroom	Minimum size of Classrooms
Grade 1-12	1m2	7m2	40	48m2
Grade R	1,6m2	7m2	30	60m2
Disabled	2m2	7m2		

The figures encapsulated in the following table are derived from the Infrastructure Database. The construction costs applied are from the previous financial year's actual tender costs as applicable to the Province. The anticipated cost of construction of classrooms is included in the table per district.

*Table 7: List and Cost Estimates for Classrooms required for 7 year Implementation Programme*

Cost of Core Classroom Spaces Demand / District	FB	JTG	NAM	PKS	ZFM	Totals
No of Classrooms addressing backlogs at R523,000 per classroom	34	111	26	15	28	214
No of ECD Classrooms addressing backlogs at R1,800,000 per classroom	41	11	9	12	18	91
	R 91 582 000	R 77 853 000	R 29 798 000	R 29 445 000	R 47 044 000	R 275 722 000
TOTAL REQUIRED						

Some of these classrooms and ECD classrooms will be provided for in the form of mobile classrooms in order to address the backlog quicker. The mobile units can then be relocated at a later stage if and when the mobile is replaced or not required any more. Mobile units are also installed at schools where it is neither financial nor feasibly viable for the department to build a permanent brick and mortar structure.

*Table 8: Schools identified with overcrowding that will require new classrooms*

### 2.1.5. Electricity

As specified in the regulations, all schools must have some form of power supply which complies with all relevant laws. The supply must be sufficient to serve the requirements of each school and must be based on the most appropriate source of power supply available at that particular school.

Forms of power supply could include one or more of the prescribed power supplies which includes grid electrical reticulation, generators, solar powered energy or wind powered energy sources. These Electricity Projects are implemented in order to bring all schools to acceptable levels of electricity and are divided into 2 groups namely conversion of solar to grid and major upgrades.

*Table 9: List and Cost Estimate for Electricity Projects for 7 year Implementation Programme*

Cost of Electricity Demand / District	FB	JTG	NAM	PKS	ZFM	Totals
Conversion from Solar to Grid at R500 000 per project	0	0	0	1	0	1

### 2.1.6. Water

The Regulations specifies that all schools must have a sufficient water supply which complies with all relevant laws and which is available at all times for drinking, personal hygiene and where required for food preparation. Sufficient water-collection points and water-use facilities must be available at all schools to allow convenient access to, and use of, water for drinking, personal hygiene and food preparation.

The choice of and appropriate water technology must be based on an assessment conducted on the most suitable water supply technology for each particular school and must be maintained in good working order. Sources of water supply could include one or more of the following:

- A Municipal reticulation network
- Rainwater Harvesting
- Mobile Tankers and tanker supply from Municipalities
- Boreholes
- Local Reservoirs and Dams

The Water Shortages at Schools in the Northern Cape are divided into groups with ratings that were low and very low. These schools need to be visited by the implementing agents who need to assess the intervention needed to bring the water standard up to date with the regulations.

*Table 11: List and Costs for Water Projects for 7 year Implementation Programme*

Cost of Water Demand / District	FB	JTG	NAM	PKS	ZFM	Totals

### **2.1.7. Ablution Facilities**

All schools must have a sufficient number of sanitation facilities that are easily accessible to all learners and educators, provide privacy and security, promote health and hygiene standards, comply with all relevant laws and are maintained in good working order.

The choice of an appropriate sanitation system must be based on an assessment conducted on the most suitable sanitation application for each particular school and includes one or a combination of either water borne sanitation, small bore sewer reticulation, septic or conservancy tank systems, ventilated improved pit latrines or composting toilets in extreme conditions.

Plain pit and bucket latrines are not allowed at schools.

The norms and standards for Ablution Facilities in Primary and Secondary Schools as per the Regulations Relating to Minimum Uniform Norms and Standards for Public School Infrastructure are set out in the table below.

*Table 13: Norms for School Ablution Facilities as per the Regulations*

	Girls Toilets	Girls Basins	Boys Toilets	Boys Urinals	Boys Basins	Grade R Toilets	Grade R Basins	Unsex / Disabled	Female Staff Toilets	Female Staff Basins	Male Staff Toilets	Male Staff Urinals	Male Staff Basins
<b>PRIMARY SCHOOLS</b>													
Farm Schools	2	1	1	1	1	0	0	1	0	0	1	0	0
Micro Schools	3	2	1	2	1	2	1	1	1	1	1	0	1
Small Schools	6	4	2	4	2	3	2	1	2	1	1	1	1

### 2.1.8. Fencing

The Regulations Specifies that every school site, which includes all school outbuildings and sporting and recreational facilities, must be surrounded by appropriate fencing to a minimum height of at least 1,8 meters.

The Department either installs steel palisade fencing or welded mesh fencing. These projects are implemented in-house by the Department.

*Table 16: List and Costs for Fencing Projects for 7 Year Implementation Programme*

Cost of Fencing at schools / District	FB	JTG	NAM	PKS	ZFM	Totals
No of Fences at an average of R650 000 per project	23	45	5	10	20	103
	R 14 950 000	R 29 250 000	R 3 250 000	R 6 500 000	R 13 000 000	R 66 950 000
<b>TOTAL REQUIRED</b>

### 2.1.9. Connectivity

According to the Regulations all schools must have some form of wired or wireless connectivity for purposes of communication, which must be maintained in good working order. The following communication facilities must be provided:

- Telephone facilities
- Fax facilities
- Internet facilities
- An Intercom or Public Address System

All public schools were provided with 3D modems during 2012/2013. Due to theft and connectivity problems, some schools experience problems from time to time and this is addressed by NCDOE as and when they arises.

From the Verification exercise it has been identified that 1 School does not have either telephone or cell phone access, 126 schools do not have fax facilities, 86 schools do not have an e-mail address (some of them however do have internet access).

This issue has been escalated to the IT Directorate of the Department.

### **3. 10 Year, Final and Additional Implementation Programmes:**

To be implemented by 31 March 2023 and 31 December 2030 respectively. The Department will implement some of these projects starting in 2015/16.

For 10 year Implementation Programme of the Regulations Relating to Minimum Uniform Norms and Standards for Public School Infrastructure and the South African Schools Act, 1996 (Act no. 84 of 1996), the focus is on Libraries and Laboratories for Science, Technology and Life Sciences, while the final Implementation Programme calls for implementation of all the other Norms and Standards.

Most of these Programmes are out of the scope of this IPMP as the IPMP captures projects in the current 3 year MTEF. The long term budget for the completion of these sub-programmes are captured in the U-AMP and will also be captured in future IPMP's.

All new buildings are required to undergo a systematic and rigorous appraisal as to the need for such an asset. The type and depth of the information required is incumbent upon the size and nature of the project. For example the planning and construction of a new full service school requires more human and financial resources than the planning and construction of a small ablution block.

The appraisal and implementation of these capital projects are outsourced to Implementing Agents due to the current capacity resident in the Department. A majority of this capacity is applied to the implementation of smaller in-house projects and the monitoring of our Implementing Agents.

Each capital project requires a separate appraisal, however the Department opts to group similar projects in an effort to fast track the appraisal, design, procurement and implementation of capital projects.

The Implementing Agent is expected to provide the Department with the relevant outputs with respect to specifications, environmental, technical, legal and implementation

requirements for each project and insofar as possible analyse each project's need, demand and socio-economic viability separately.

School buildings and other school facilities must comply with fire regulations in terms of the National Building Regulations and SANS 10-400.

The various sub-programmes are as follows:

### **2.1.10. Media Centres / Libraries**

All schools must have a school library or a media centre and a minimum, adequate and suitable school library collection. The library can be in the form of a mobile library, a cluster library, a classroom library, a centralised school library or a school community library. Media Centres and Libraries should be secured and placed in a location whereby the community at large may also be able to benefit from the infrastructure.

*Table 18: List schools that require Media Centre Libraries*

### **2.1.11. Science Laboratories**

All schools that offer science subjects must have a laboratory and the necessary apparatus and consumables in accordance with the specific curriculum needs of a particular school to make it possible to conduct experiments and scientific investigations.

The apparatus may be housed in a laboratory, mobile laboratory, classroom or a safe container, as determined by the school. It must be stored in a lockable facility in accordance with safety standards provided for in all relevant laws.

A laboratory for science, technology and life sciences may, where practicable, be combined in one room. A laboratory must be maintained in good working order.

### 2.1.14. Sport Facilities

All schools must have areas where physical education, sporting and recreational activities can be practiced. The areas that are provided by a particular school for sporting and recreational activities will depend on the type of sporting and recreational activities undertaken by that school.

A school may make use of the sporting and recreational facilities of another school or of a local community, in consultation with that other school or with the responsible officials of the community concerned, if it is not possible for the school to provide such facilities.

### 2.1.15. Security, Caretaker and Storage

Schools must have at least one form of safety and security measure apart from the fencing namely burglar proofing to all opening window sections on all ground floor buildings that are accessed by learners and educators, a security guard arrangement or an alarm system linked to a rapid armed response where available.

*Table 23: List schools that require security, caretaker rooms and Storage*
