

Provincial FUNS Highlights: Limpopo and Free State

Presentation by: Zamangwe Zwane
Research Associate, DBE
10 November 2025

Presentation Overview

1. Assessment Overview
2. Literacy challenges by schools
3. Limpopo
 - 3.1. Sample Description
 - 3.2. Key Findings
4. Free State
 - 4.1. Sample Description
 - 4.2. Key Findings
5. Key Takeaways

Overview of Assessments Conducted

- Home Language Oral Assessment (Grades 1-4)
 - Tasks: rapid object naming, letter sound recognition, word recognition, oral reading fluency, oral comprehension
- English First Additional Language Oral Assessment (Grades 2-4)
 - Tasks: similar domains assessed in English as a second language
- Written Assessment (Grades 3-4)
 - Tasks: written comprehension and semantic awareness in the home language

Literacy Challenges faced by schools

Outcomes	National	Tshivenda	Xitsonga	Sesotho- Setswana
Overcrowded Classrooms	23%	18%	30%	32%
Lack of reading resources	37%	59%	25%	44%
Learner's inability to read	66%	66%	54%	74%
Comprehension challenges	53%	51%	72%	71%
Lack of Teacher Content Knowledge	11%	17%	6%	15%
Learner Absenteeism	23%	7%	16%	6%

Red

High challenge — frequently reported by principals

Orange

Moderate challenge — affects many schools but not universal

Yellow

Low challenge — reported by fewer schools

1. Limpopo

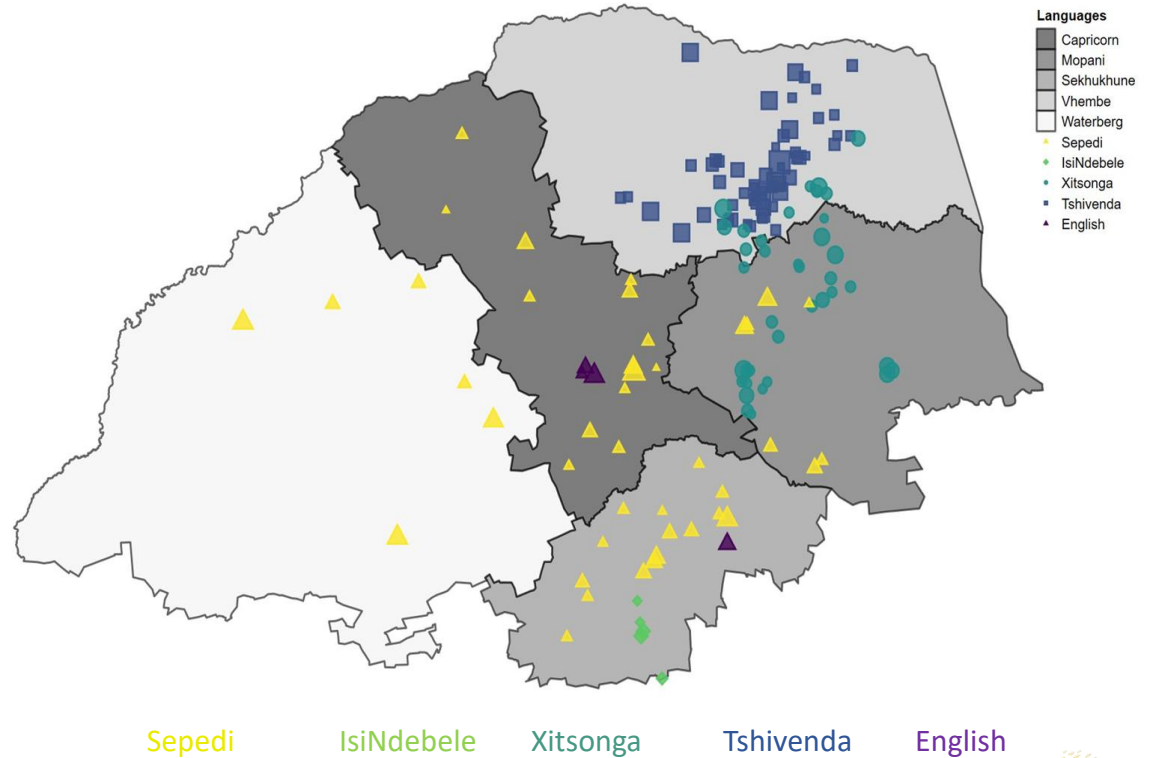

basic education
Department:
Basic Education
REPUBLIC OF SOUTH AFRICA

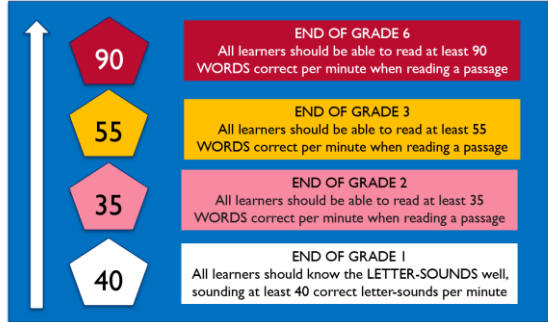

Sample Description and Overview

- Data was collected in **150 schools** across districts in Limpopo.
- Languages assessed: English, IsiNdebele, Sepedi, Xitsonga, Tshivenda
- Learners largely in Quintile 1 – 3 schools

Tshivenda, Xitsonga and Sesotho – Setswana Benchmarks

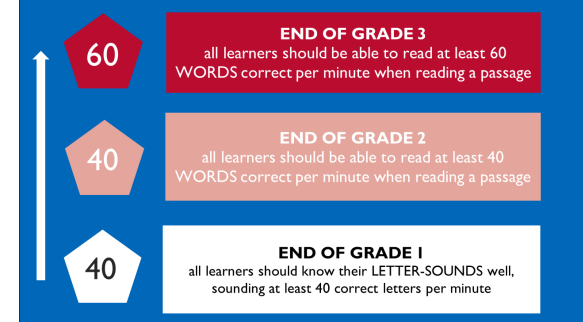

Tshivenda Reading Benchmarks

Xitsonga Reading Benchmarks

Sepedi Reading Benchmarks

Home-Language Benchmark Performance: Limpopo

- Tshivenda learners in Grades 2 – 4 in Limpopo achieve higher results than their national and provincial peers in early grades.
- Benchmark attainment is low across grades

EFAL Benchmark Performance by Grade and Language

Tshivenda learners in grade 3 in Limpopo have a higher proportion of learners reaching the benchmark than peers, but by Grade 4 a smaller share of Tshivenda learners reach the benchmark with a larger share of Sepedi learners reaching the benchmark compared to the other groups.

Home-Language Comprehension Performance

Across Grades 1 – 4 comprehension improves steadily but remains below National Levels

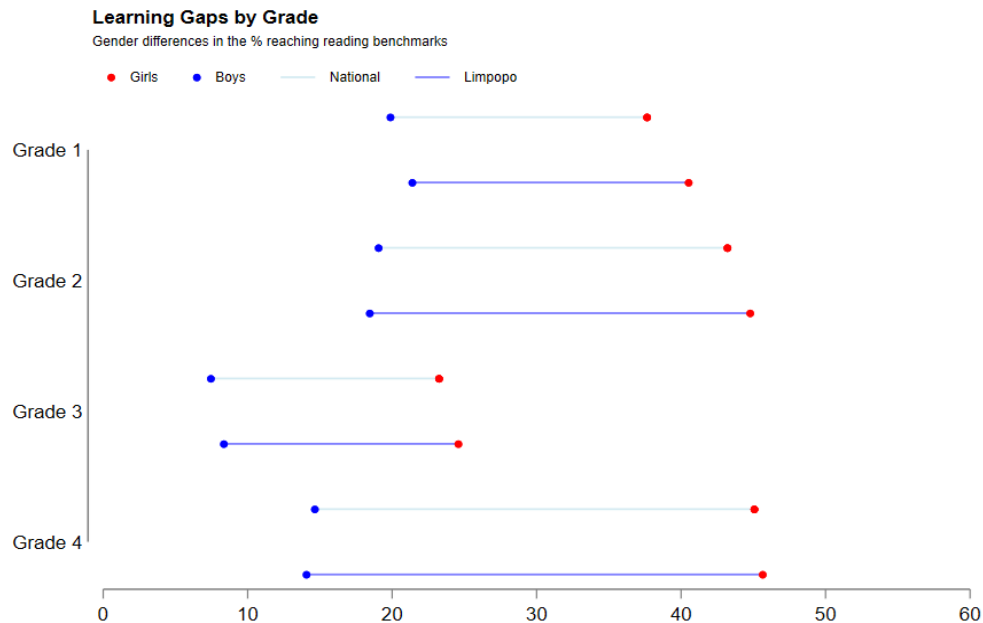

EFAL Comprehension Performance

EFAL comprehension improved between Grades 3 and 4 across all groups.

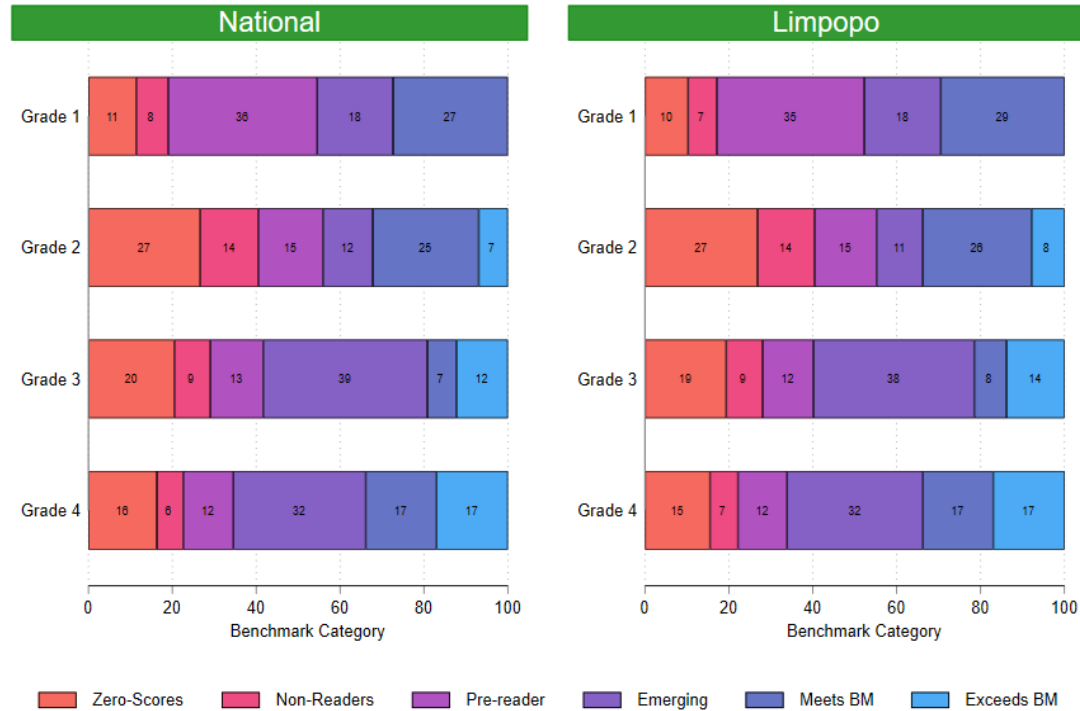

Gender Differences in Reaching the Home-Language Reading Benchmark

In every grade, a greater proportion of girls than boys reach the benchmark. In Limpopo, the proportion of female learners reaching the benchmark is higher than the national average across all grades

Benchmark Categorization by grade

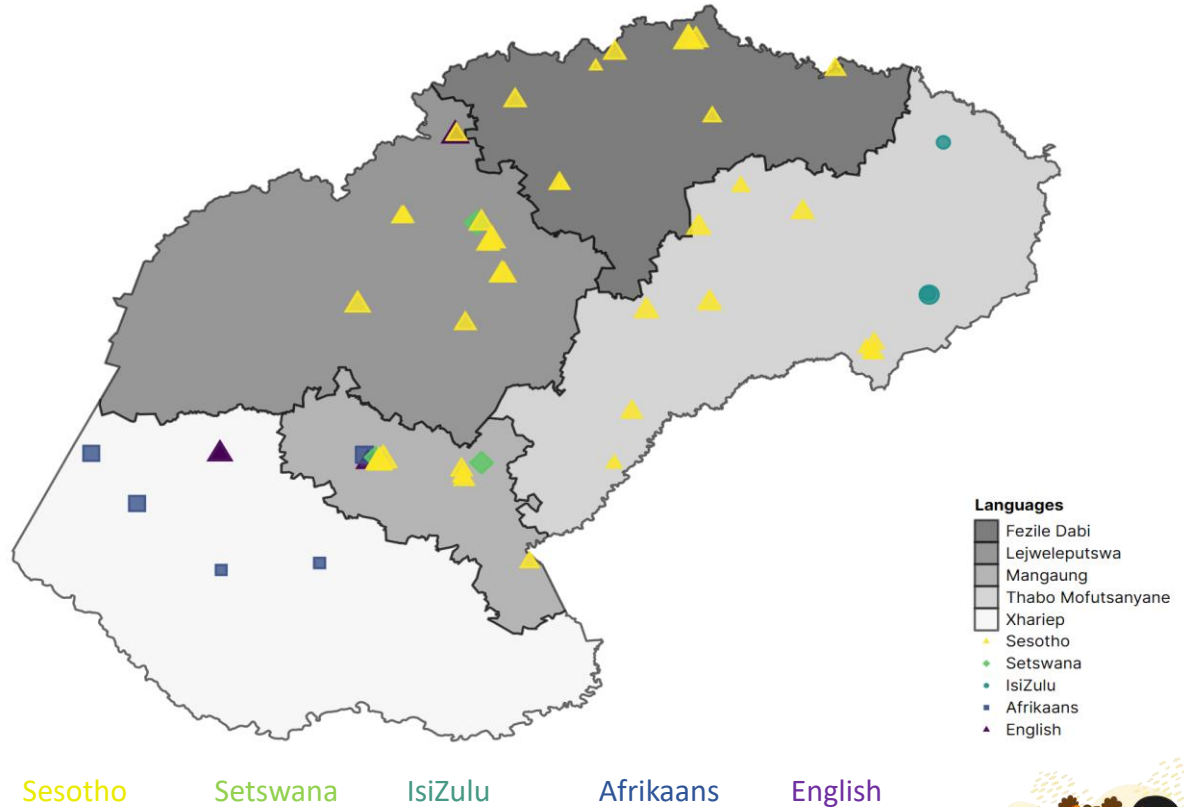

1. Free State

Sample Description and Overview

- Data was collected in **59 schools** across all Five Free State districts.
- Languages assessed: English, Afrikaans, IsiZulu, **Sesotho**, Setswana
- **94.9%** of learners from **Quintile 1 – 3** schools

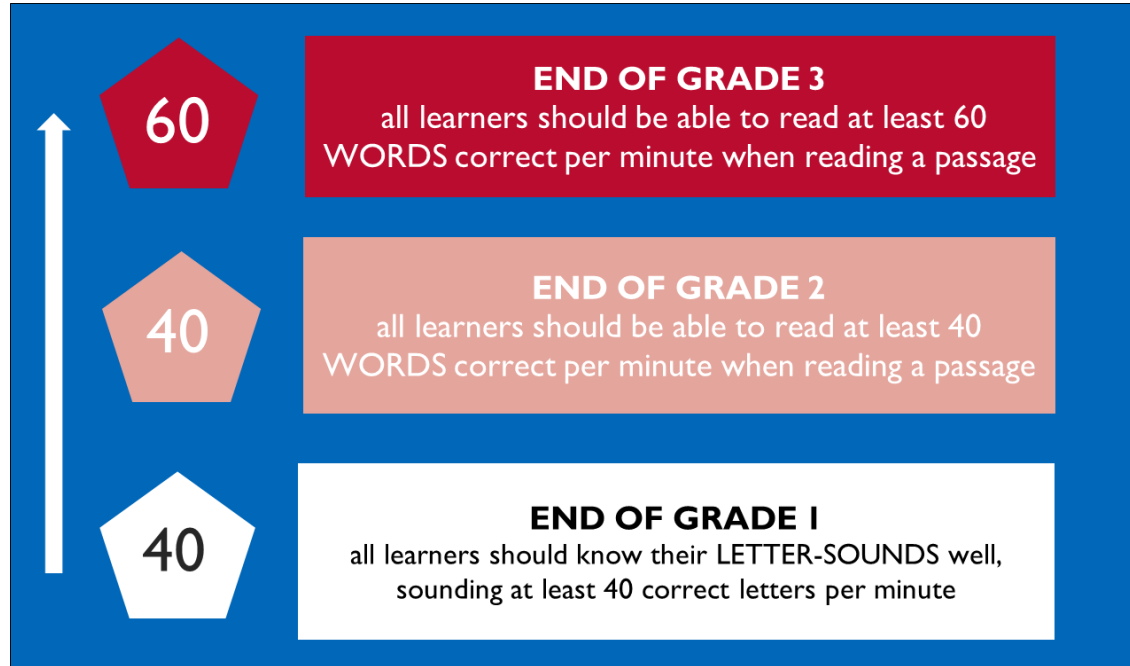

Language Distribution of Learners

Language of Learning and Teaching (LOLT) and Grade

- Learners in the Free State were taught and assessed in five of the eleven official languages, with most assessed in Sesotho.
- The language of assessment matched each school's Foundation Phase LOLT, based on 2023 LURITS data.

Sesotho – Setswana Language group Benchmarks

% Learners reaching Reading Benchmarks: Home Language

Majority of learners are not meeting reading benchmarks across grades (esp. Gr 3)

FS Sesotho learners performed better than their national language group peers

% Learners reaching Reading Benchmarks: English FAL

Majority of learners are not meeting reading benchmarks across grades

FS Sesotho learners performed slightly below than their national language group peers in Gr 4

Average Comprehension Scores

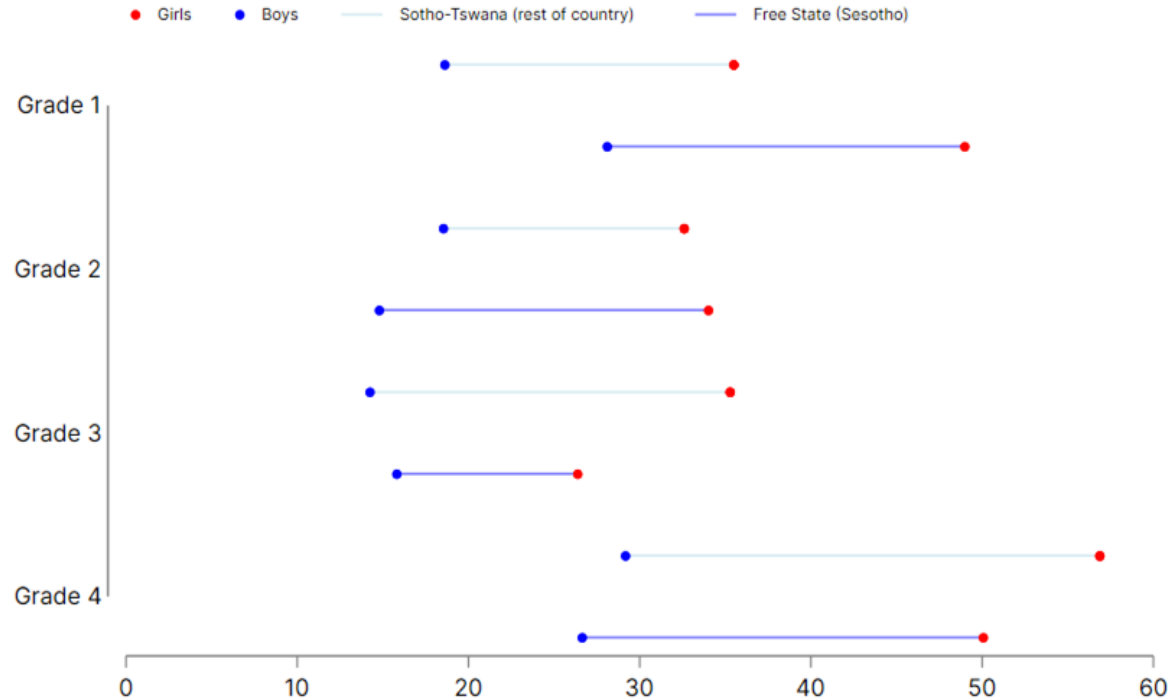

The average comprehension score ranges from 30% to 43% across grades

Note: Figure excludes learners who scored zero for comprehension

Girls are more likely to meet reading benchmarks than boys

**Higher proportion
of girls meeting
reading
benchmark**

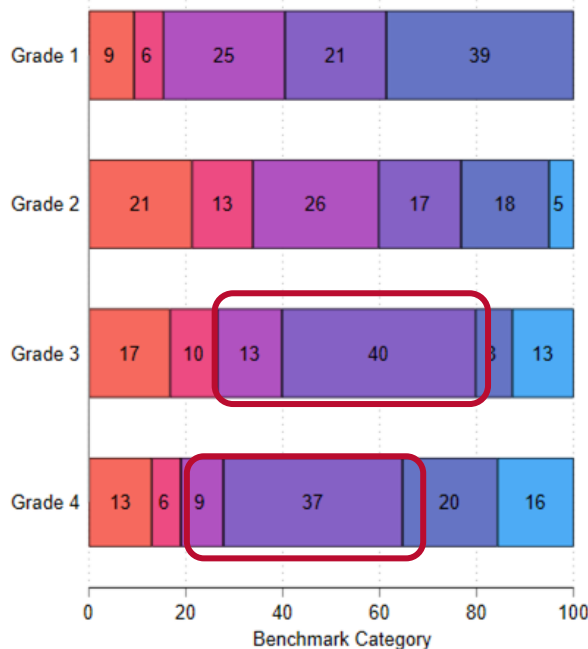

**Girls are twice as
likely to meet the
reading
benchmark than
boys**

Categories of achievement: Home Language

Sesotho–Setswana (Rest of the Country)

Sesotho (Free State)

A large group of learners are able to decode words, but they are doing so too slowly

How can these learners be moved further along in their literacy?

Zero-Scores Non-Readers Pre-reader Emerging Meets BM Exceeds BM

5. Key Takeaways

Free State & Limpopo

Key Takeaways

- Both provinces show **steady progress across grades**, especially in oral reading fluency.
- However, gains are more consistent in the Free State, while Limpopo's progress varies across languages.
- **Socio-economic inequalities** remain central: over 90% of sampled learners in both provinces attend Quintile 1–3 schools
- **Gender gaps:** Girls outperform boys consistently in reading and comprehension in both provinces.
- In both provinces, less than half of the learners reach grade-level benchmarks by Grade 4.
- **Free State Sesotho learners** perform slightly better than national Sesotho peers, while **Limpopo learners** remain below National comprehension levels.
